Traefik Core Concepts

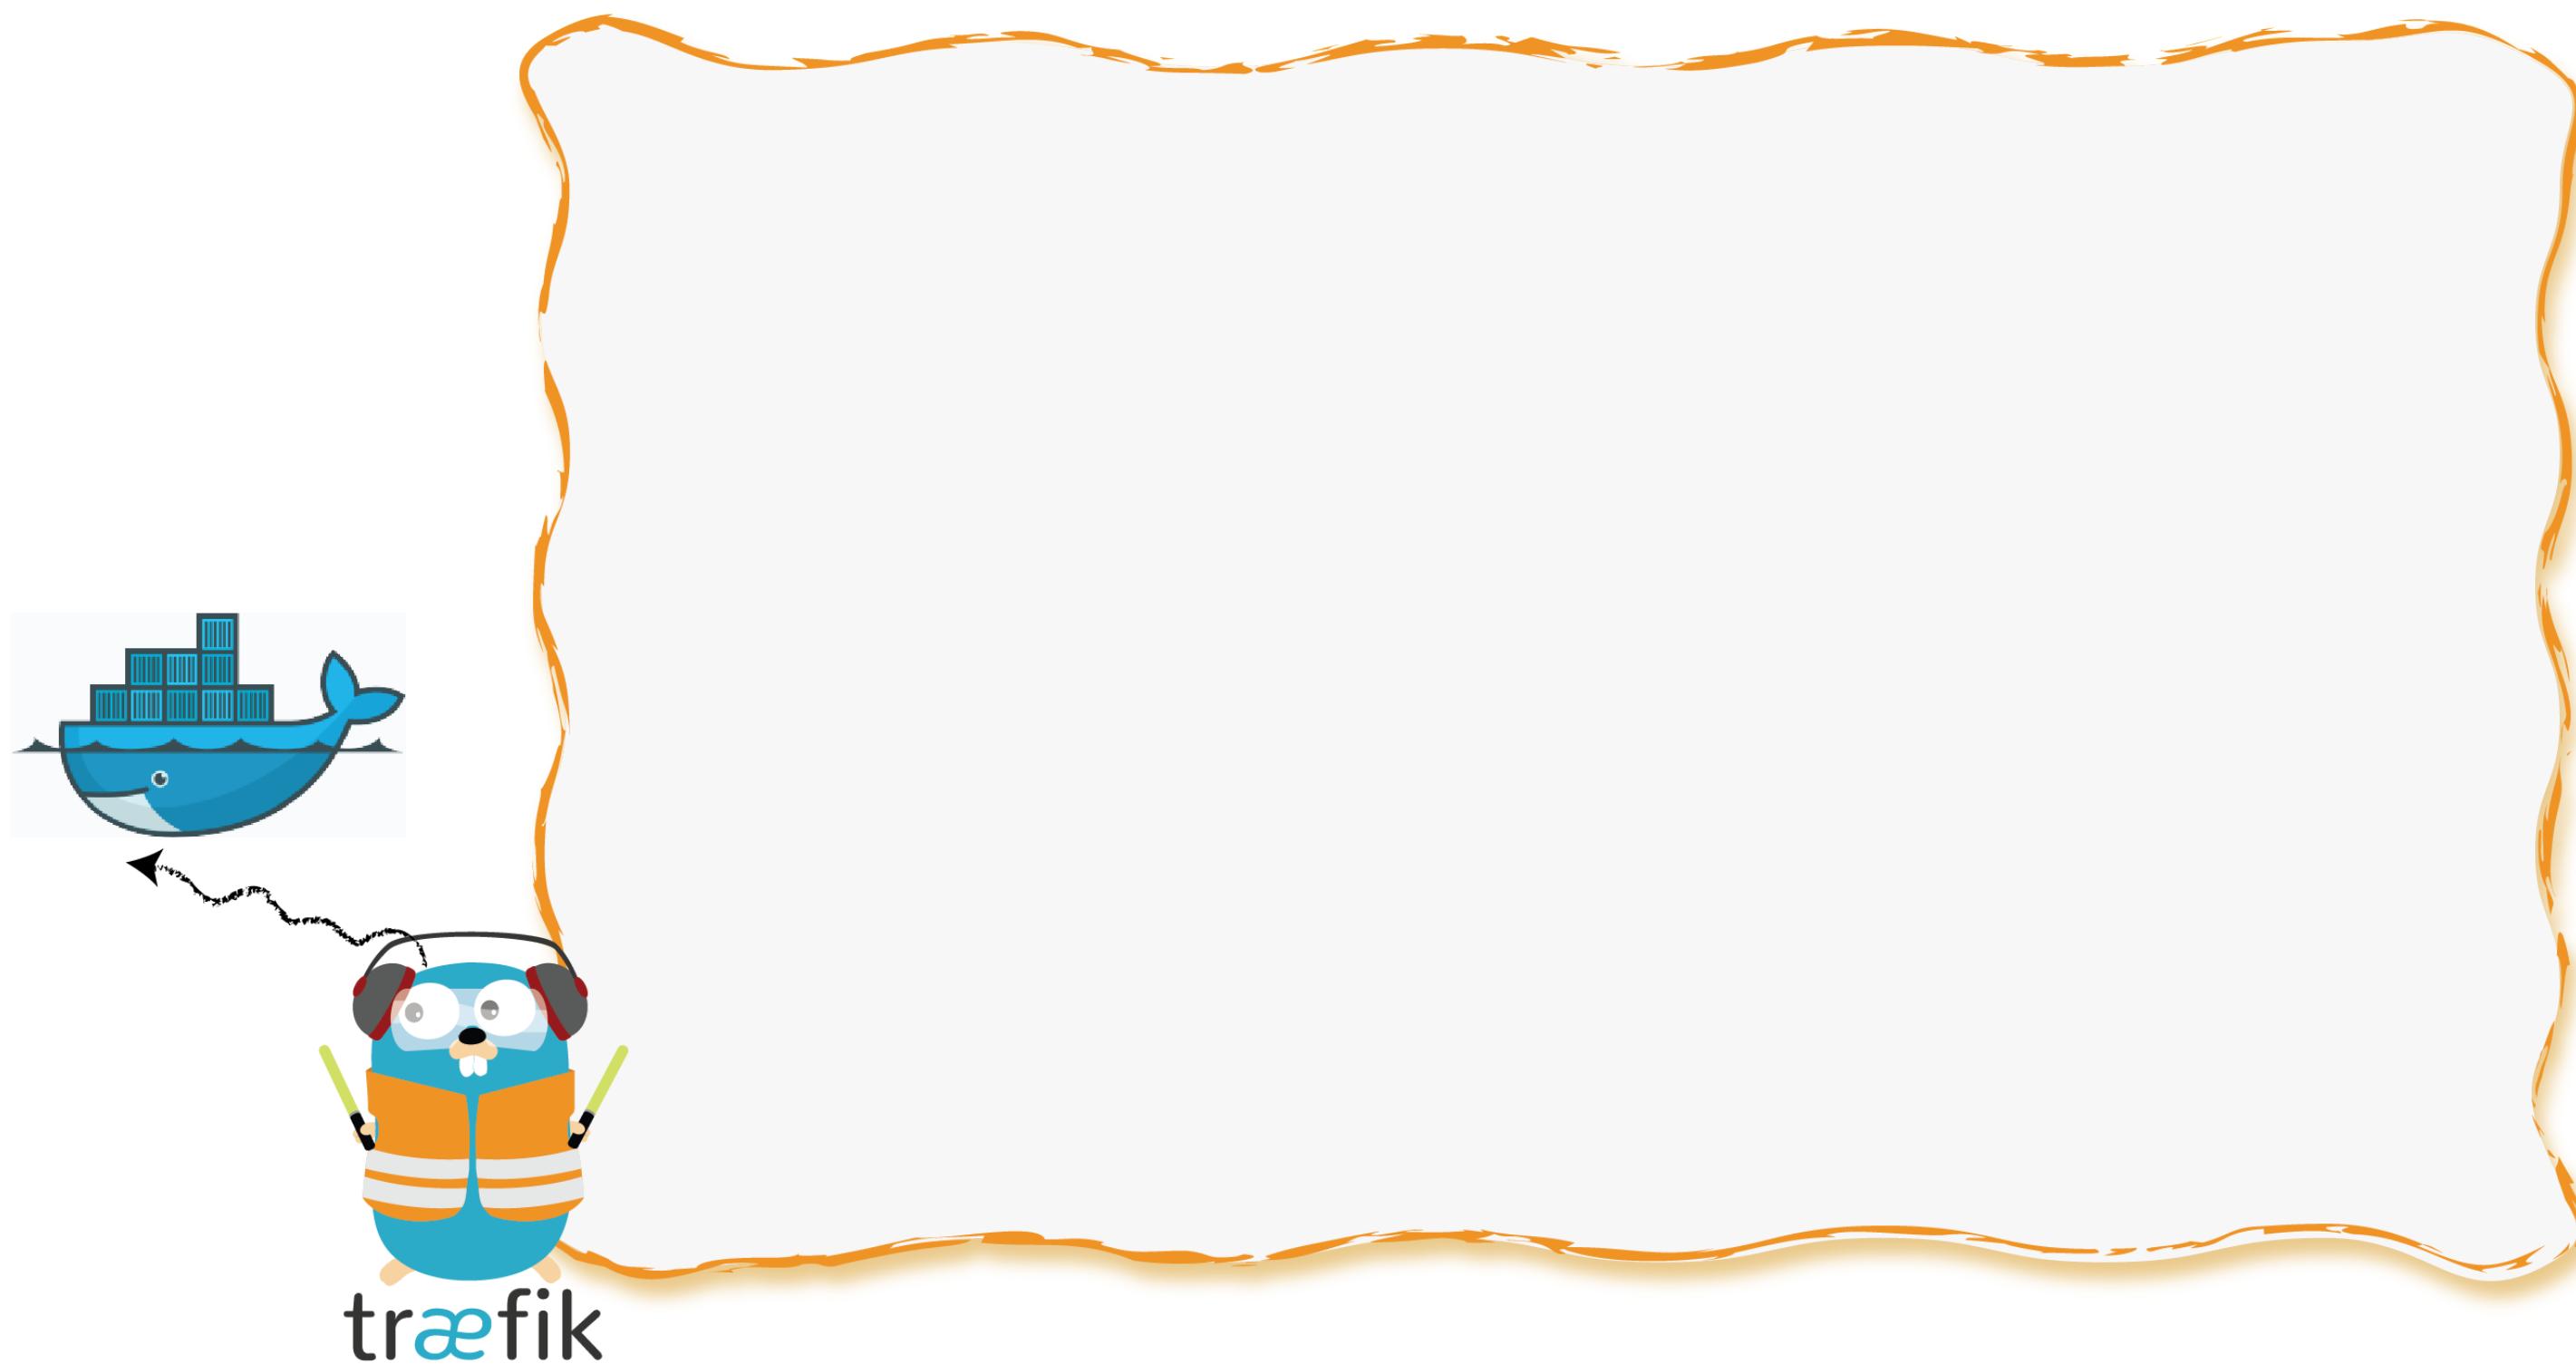

Remember The Diagram?

Let's Simplify

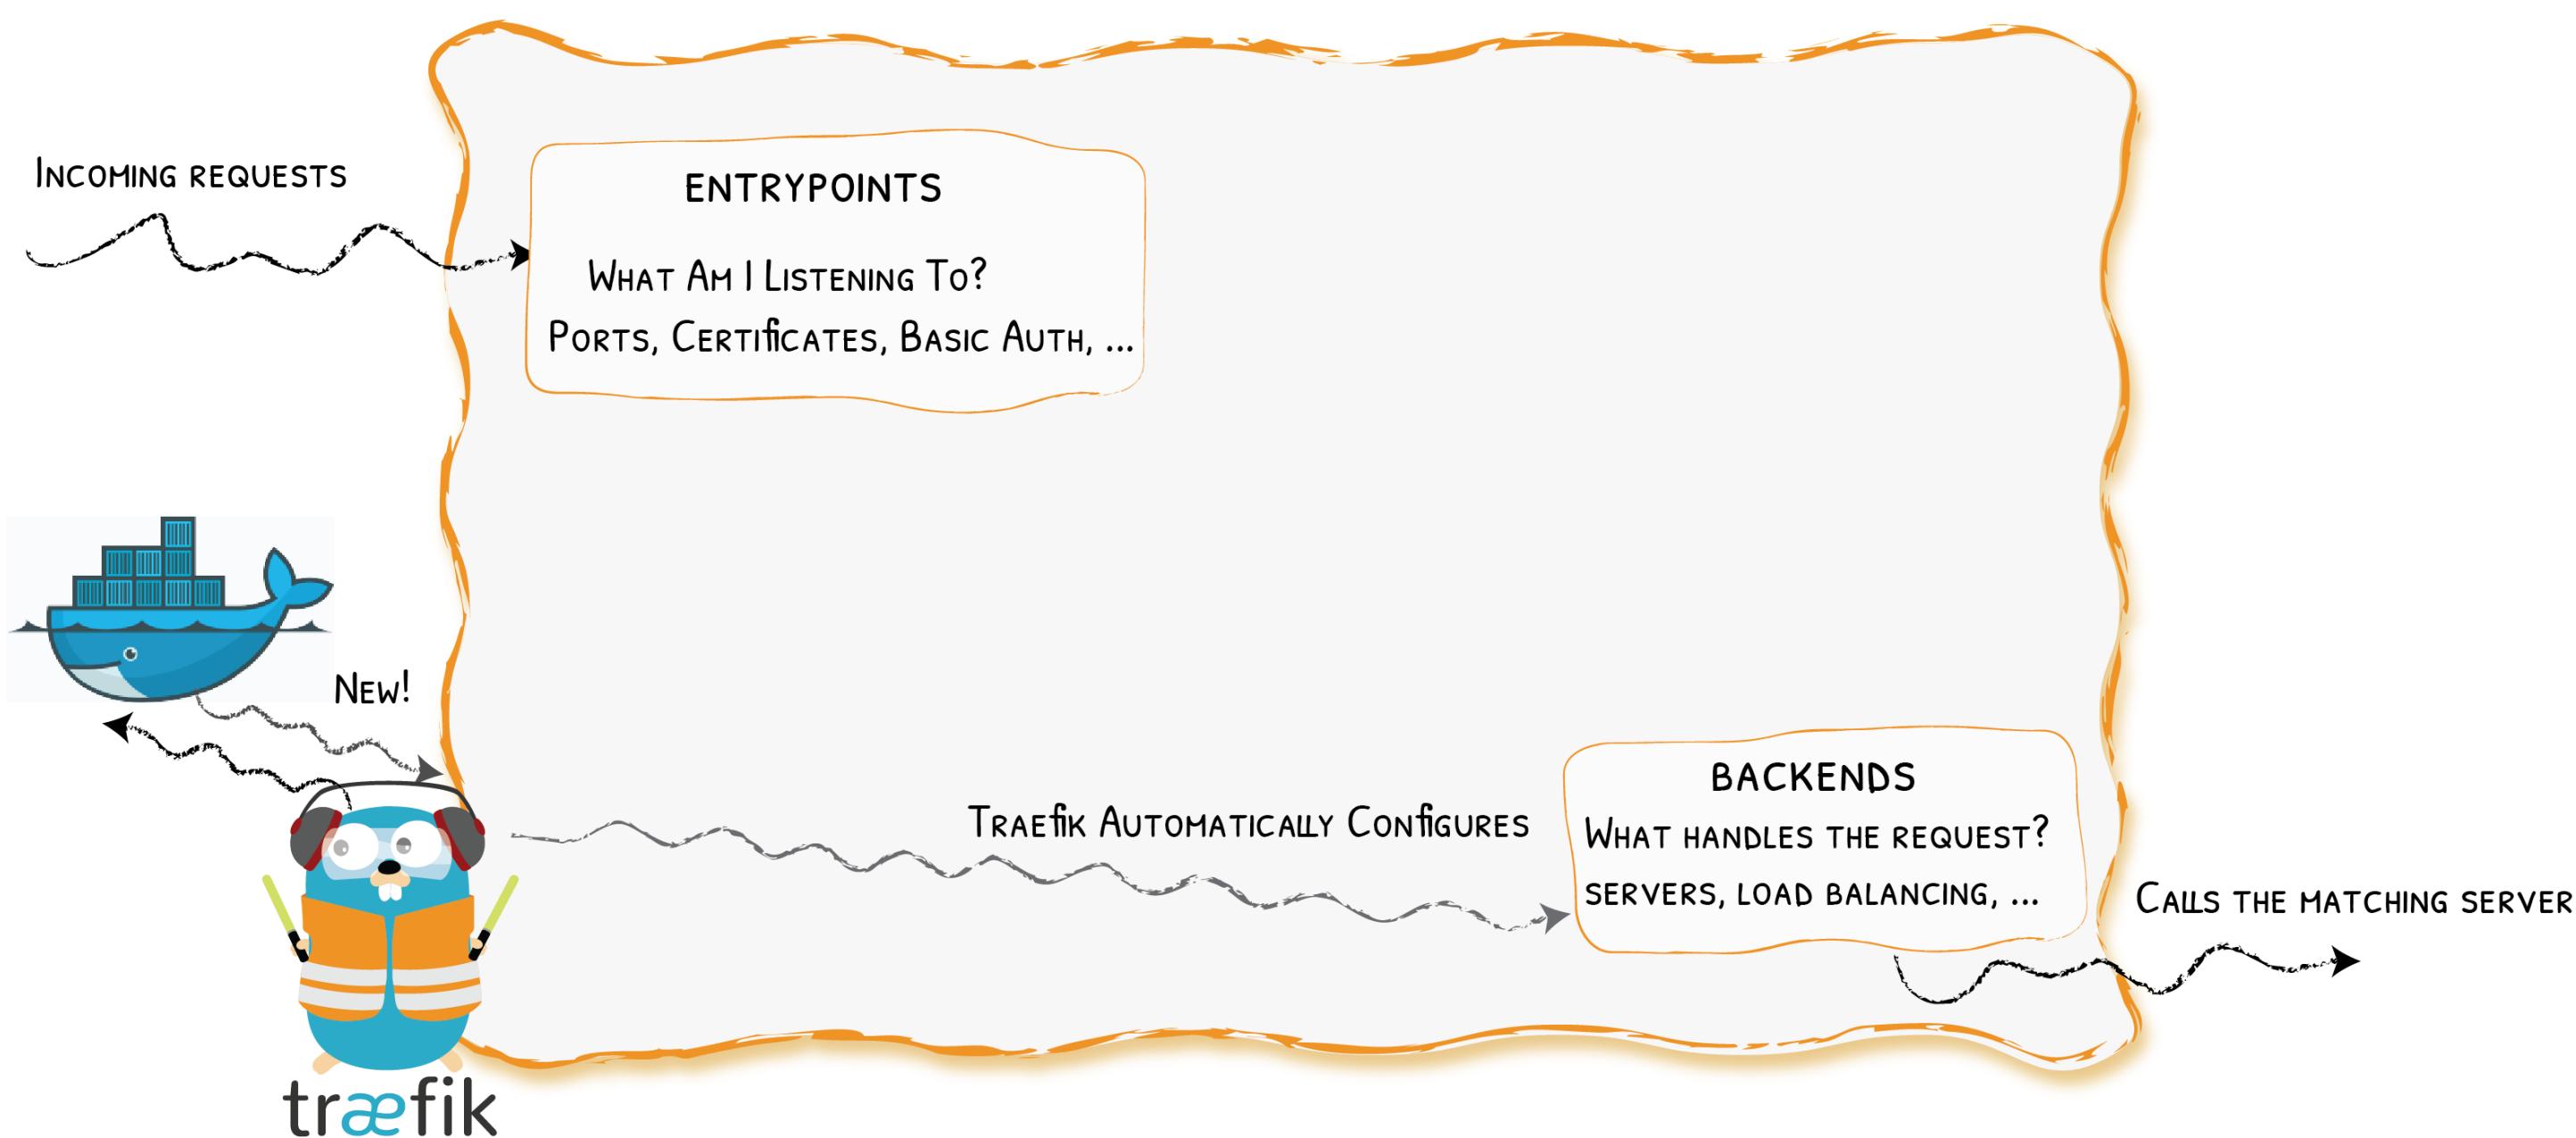

Providers

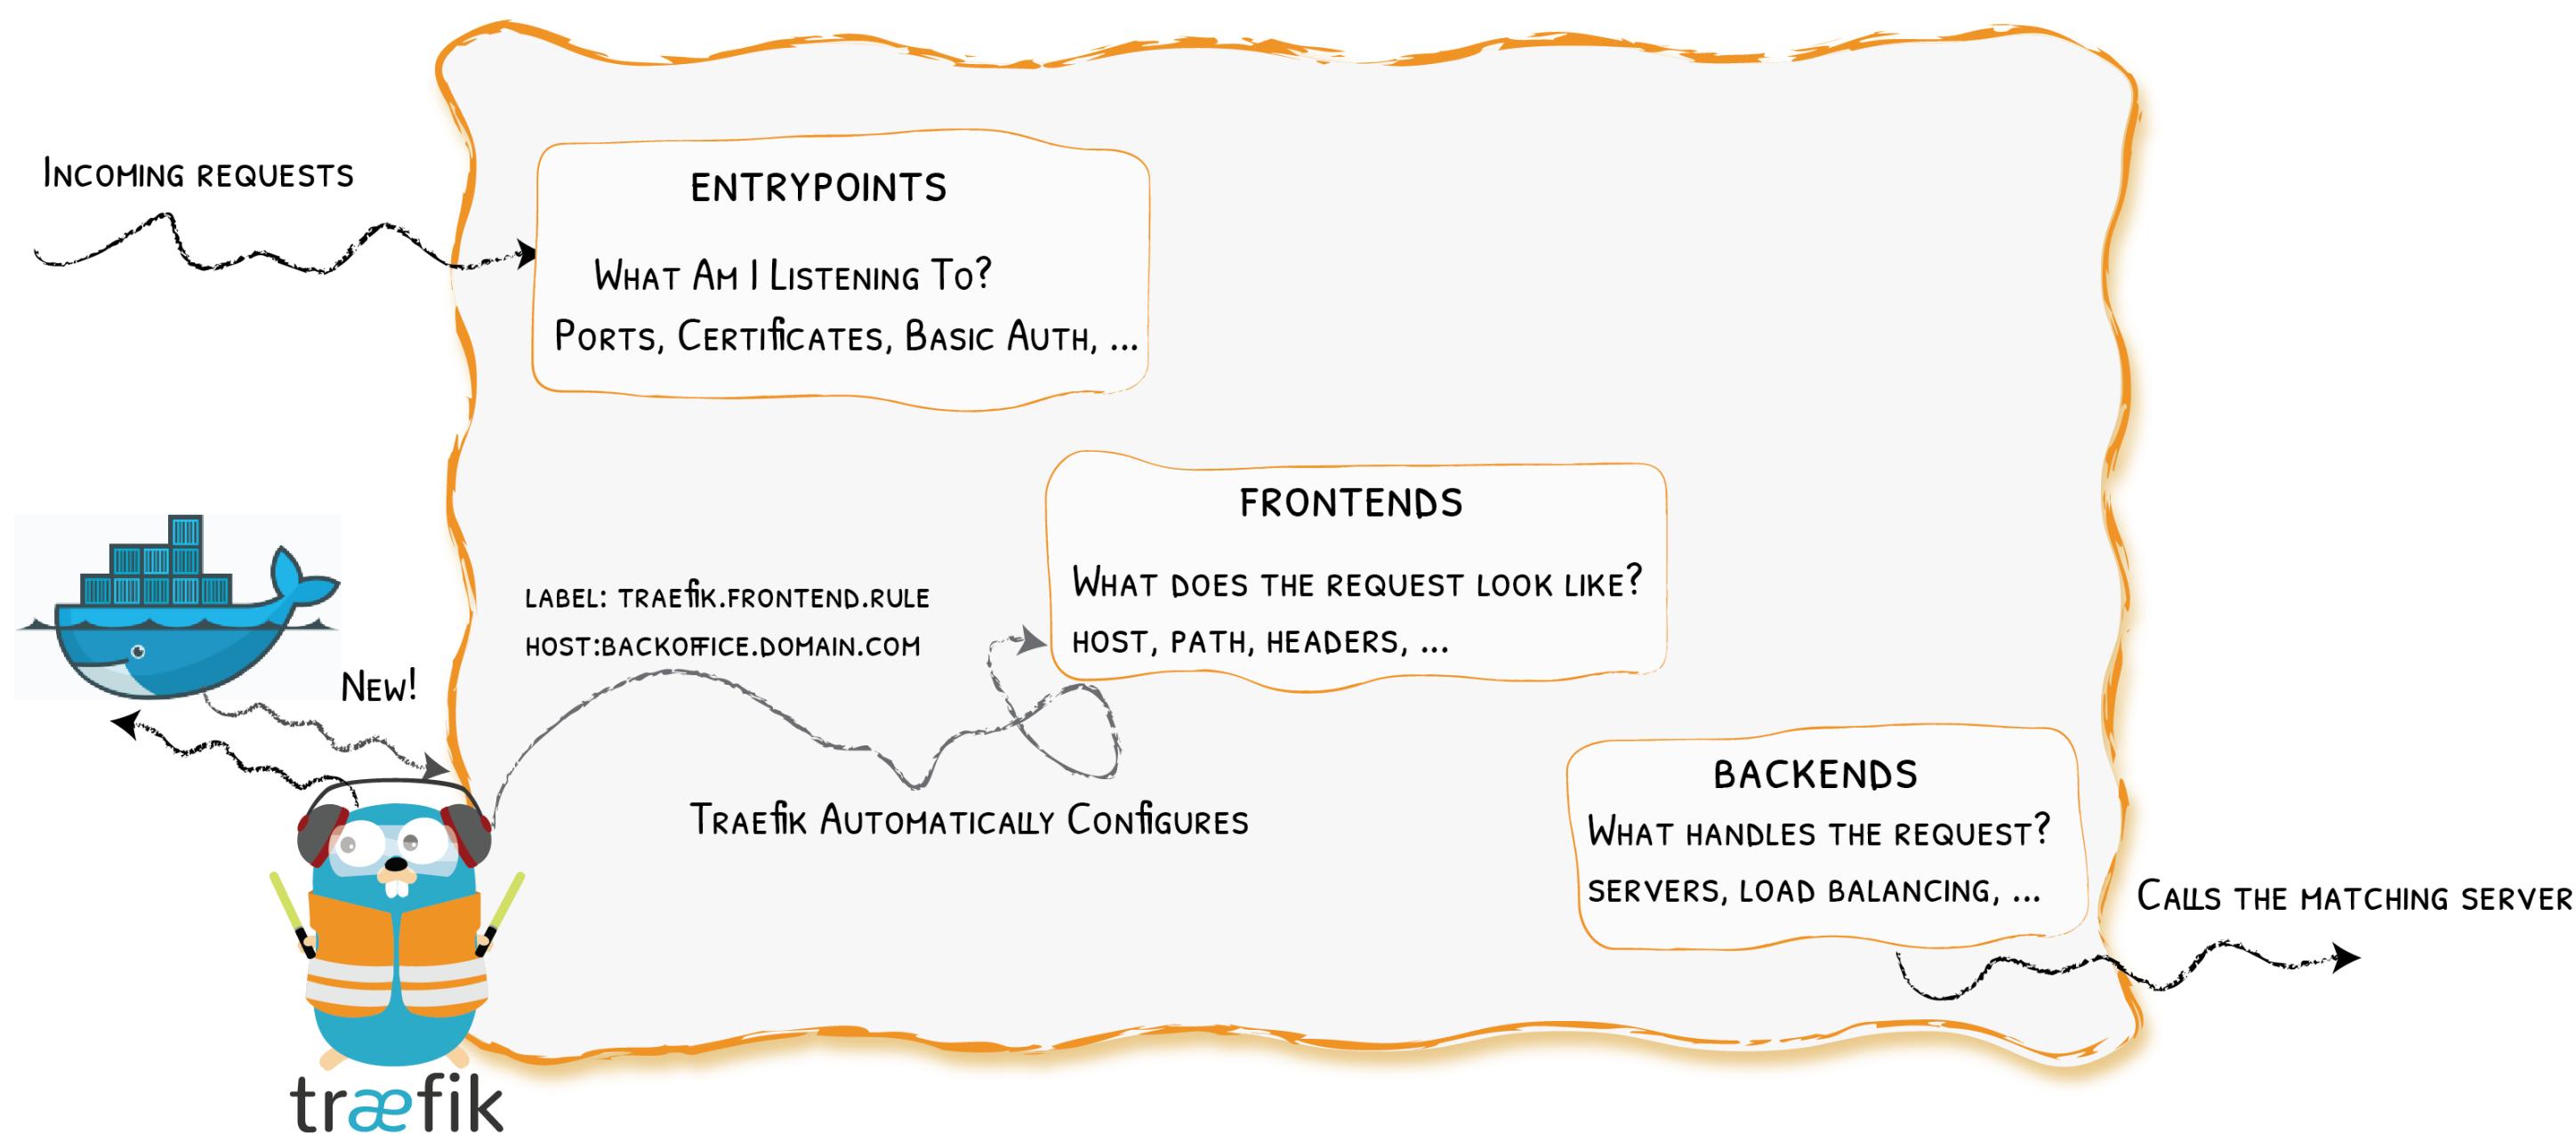

Entrypoints

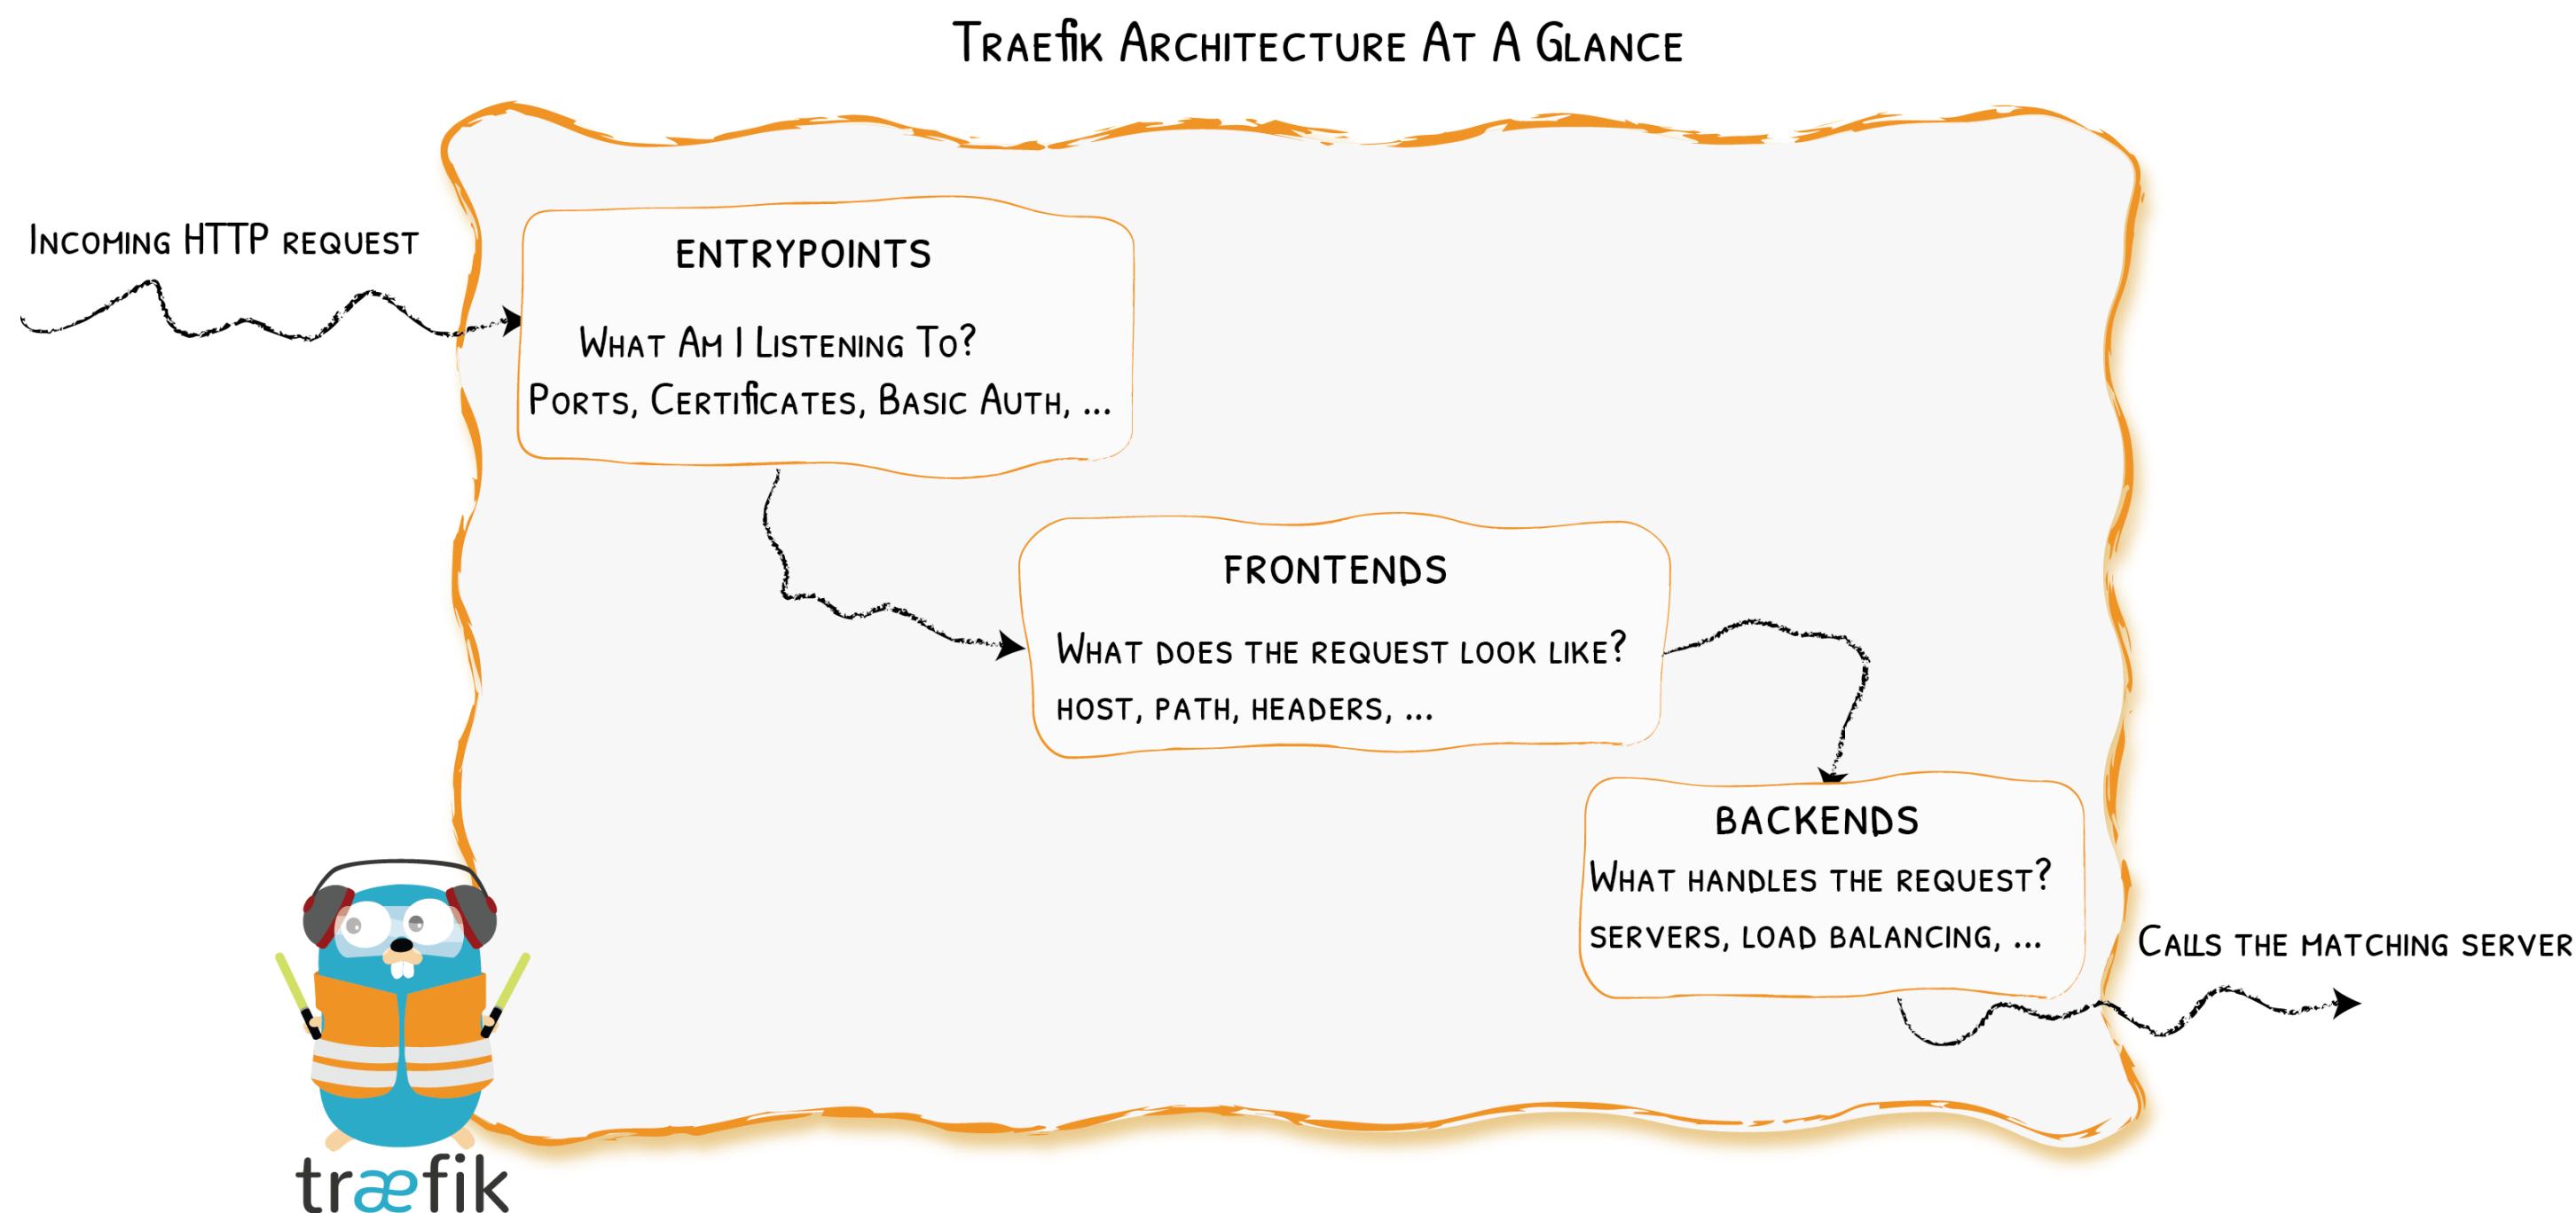

Backends

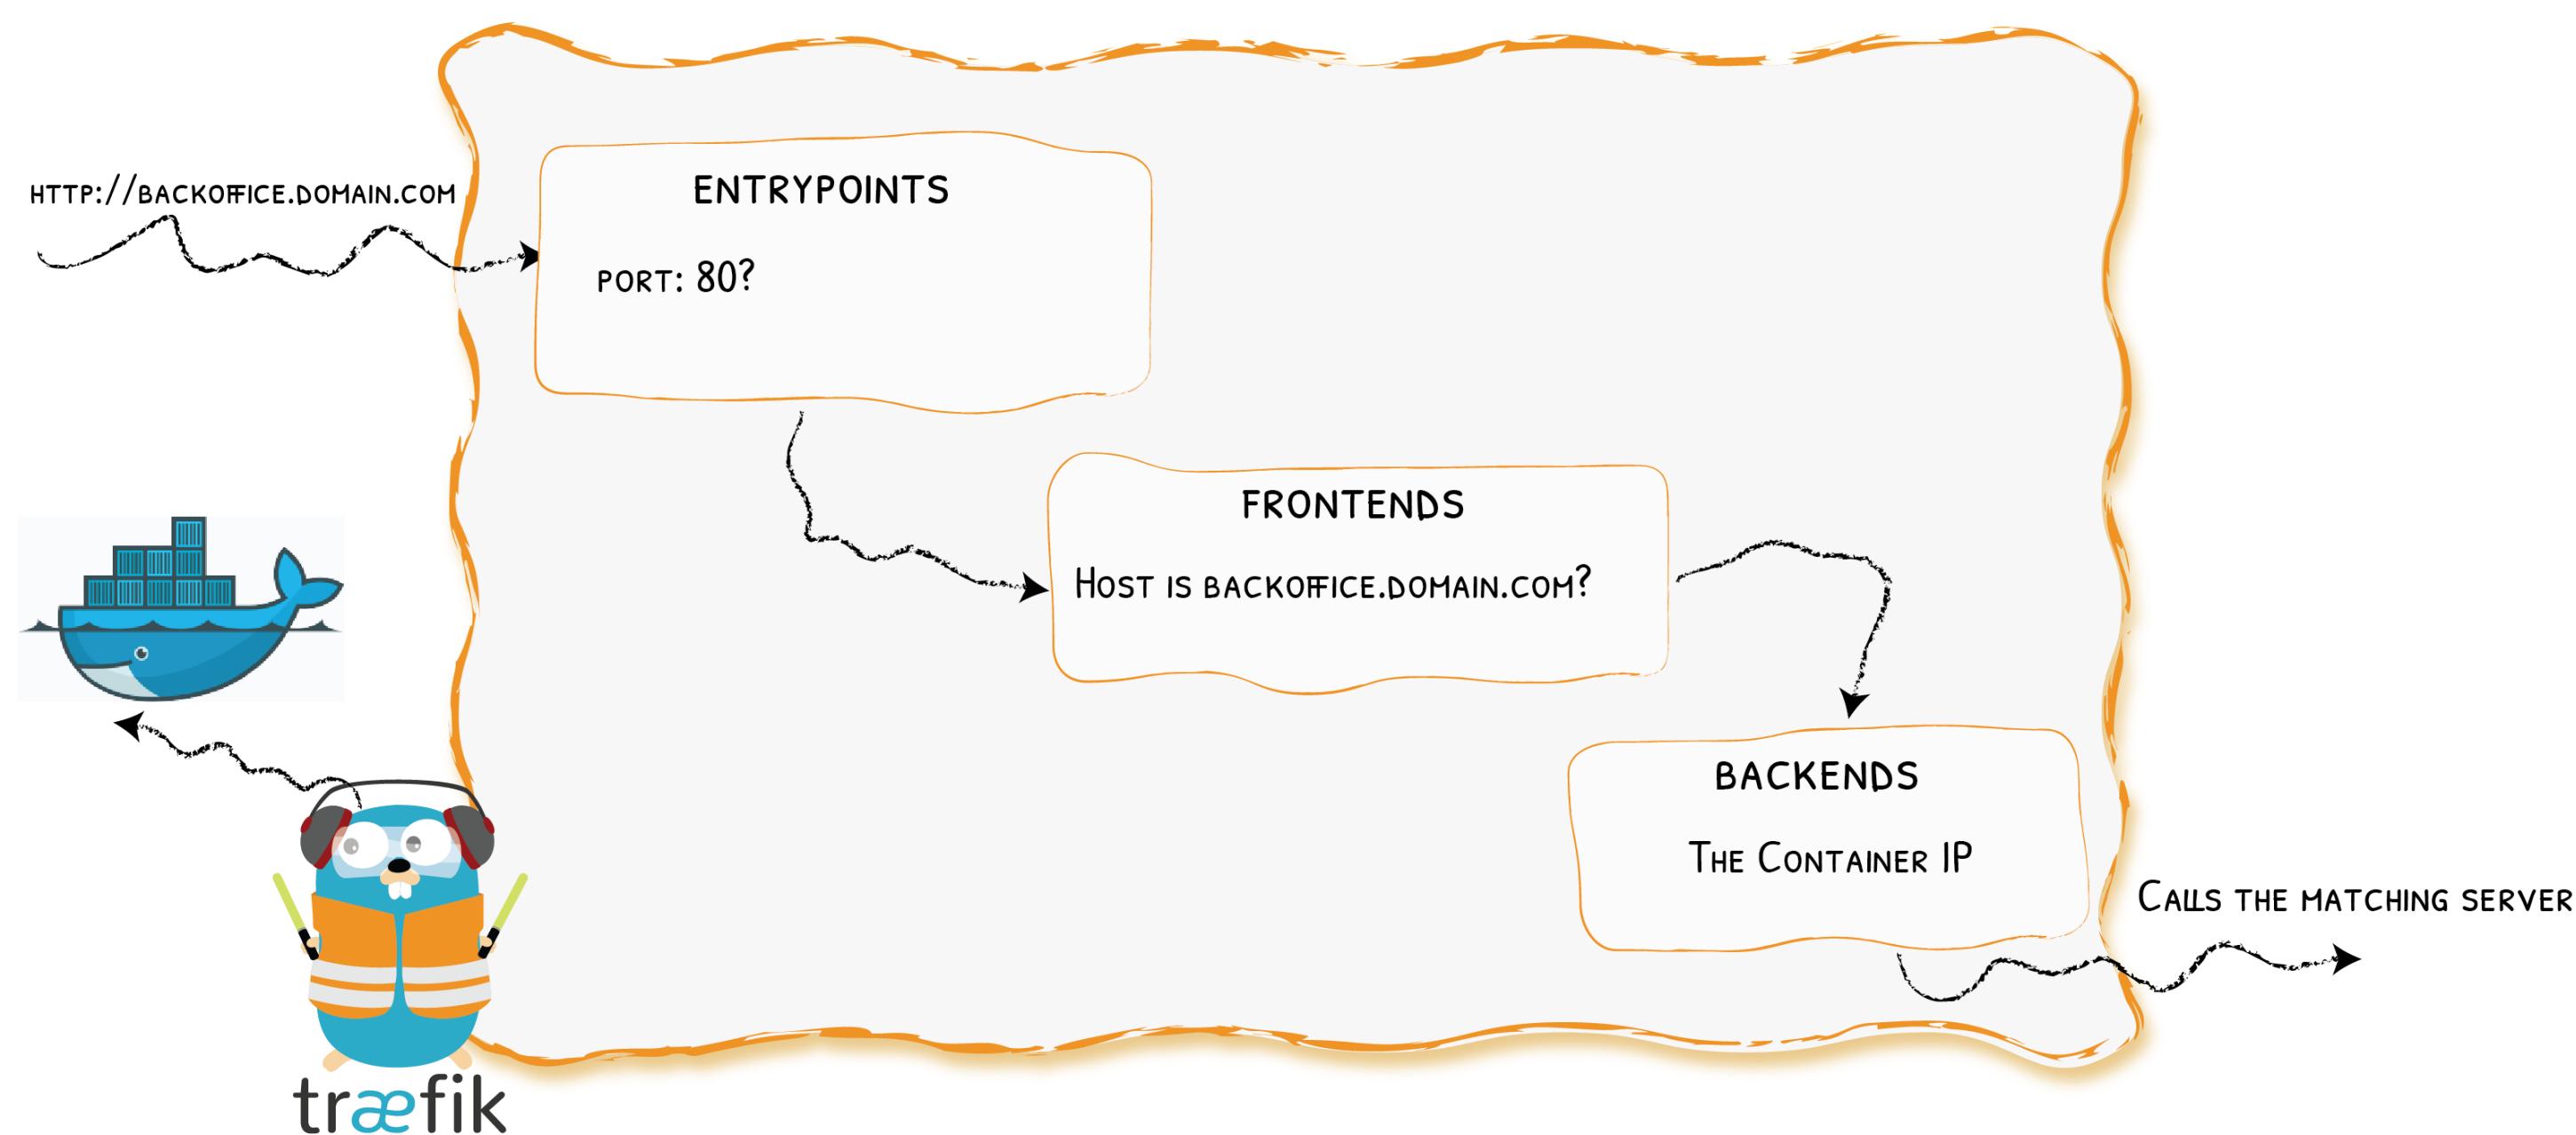

Frontends

At A Glance

In Practice

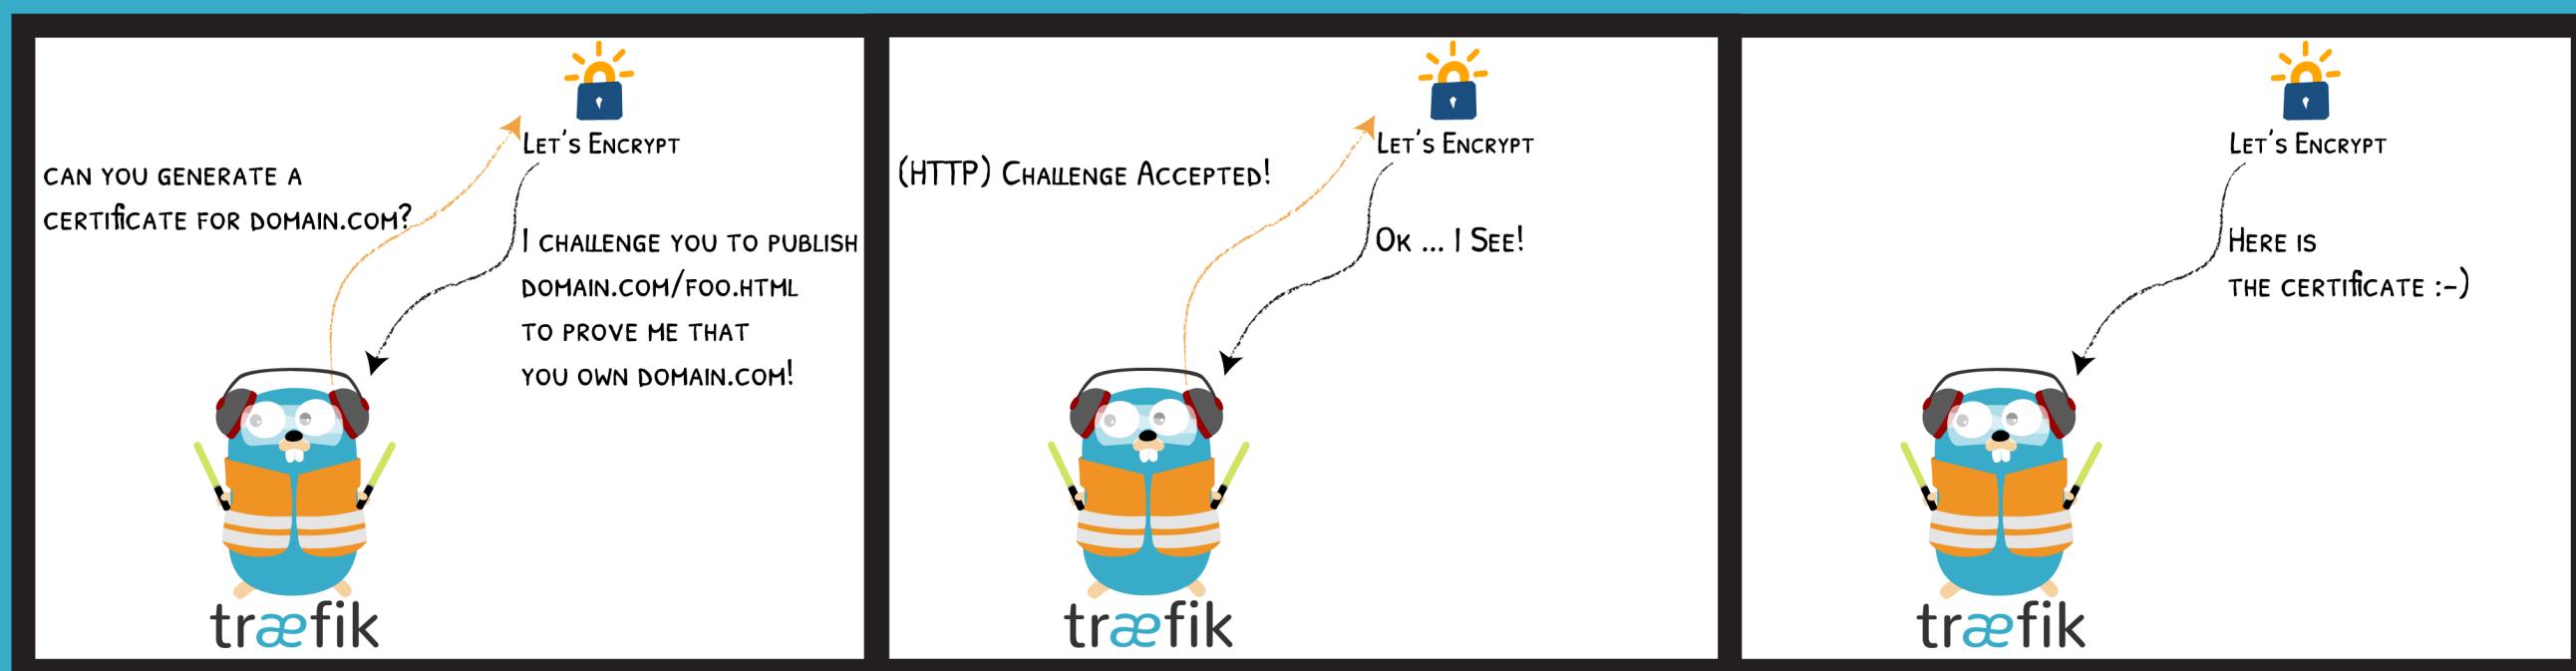

Show Me The Configuration!

Keep It Simple

- With 🐳:

```
entrypoint:  
  image: traefik:v1.7  
  command:  
    - "--docker"  
    - "--docker.domain=mycompany.org"  
    - "--acme.email=ssl-admin@mycompany.org"  
    - "--acme.httpChallenge.entryPoint=http"  
  # Or you could use a TOML file with "--configFile=/etc/traefik/traefik.toml  
volumes:  
  - /var/run/docker.sock:/var/run/docker.sock
```

HTTPS For Everyone With Let's Encrypt

- TLS, DNS and HTTP challenges supported

With 🐳: Simple Backend

```
# https://www.mycompany.org -> http://webserver:80/
webserver:
  image: nginx:alpine
  labels:
    - "traefik.frontend.rule=Host:www.mycompany.org"
```

With Context

```
# https://mycompany.org/jenkins -> http://jenkins:8080/jenkins
jenkins:
  image: jenkins/jenkins:lts
  labels:
    - "traefik.frontend.rule=PathPrefix:/jenkins"
    - "traefik.port=8080" # Because 50000 is also exposed
  environment:
    - JENKINS_OPTS=--prefix=/jenkins
```

With 🐳: Rewrites

```
# https://mycompany.org/gitserver -> http://gitserver:3000/
gitserver:
  image: gitea/gitea:1.5
  labels:
    - "traefik.frontend.rule=PathPrefixStrip:/gitserver"
    - "traefik.port=3000" # Because 22 is also exposed
```

With Websockets

```
# https://mycompany.org/webterminal -> http://webterminal:7681/
webterminal:
  image: ts10922/ttyd
  labels:
    - "traefik.frontend.rule=PathPrefixStrip:/webterminal"
  expose:
    - "7681"
```

Traefik With ⚓

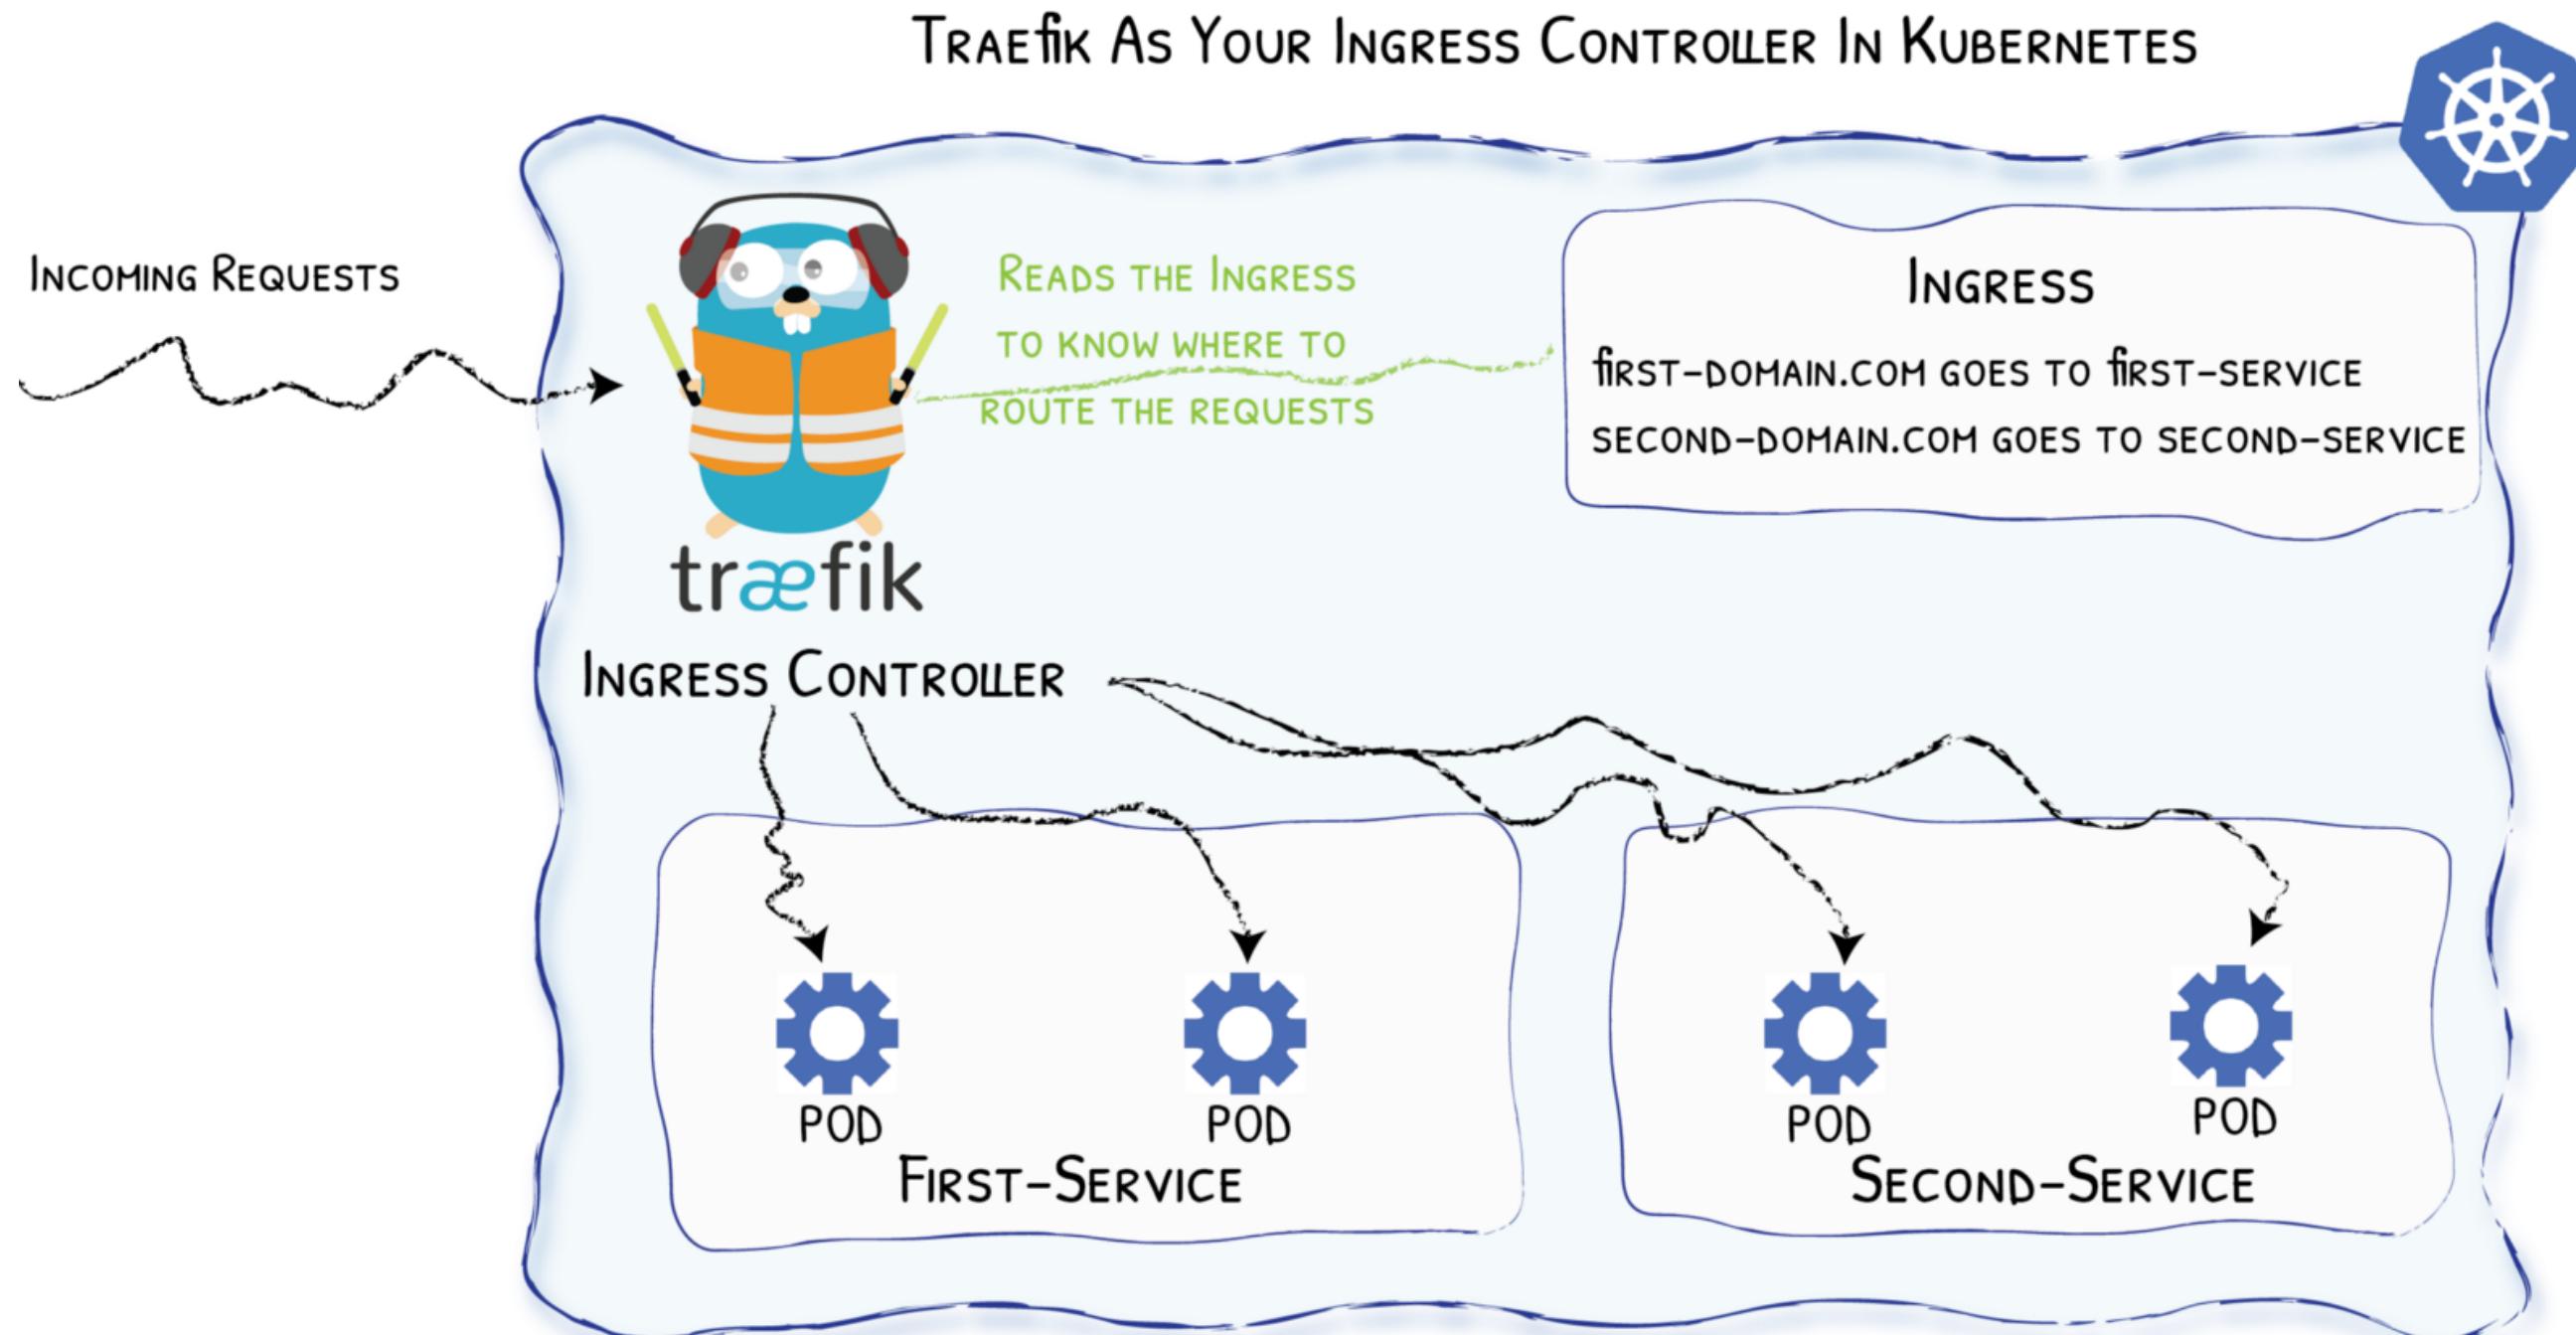

Diagram from <https://medium.com/@geraldcroes>

Did You Say YAML?

```
apiVersion: extensions/v1beta1
kind: Ingress
metadata:
  annotations:
    # kubernetes.io/ingress.class: 'nginx'
    kubernetes.io/ingress.class: 'traefik'
spec:
  rules:
  - host: mycompany.org
    http:
      paths:
      - path: "/whoami"
        backend:
          serviceName: whoami
          servicePort: 80
```

We Missed Talking About...

A cloud of technology terms in various colors, including:

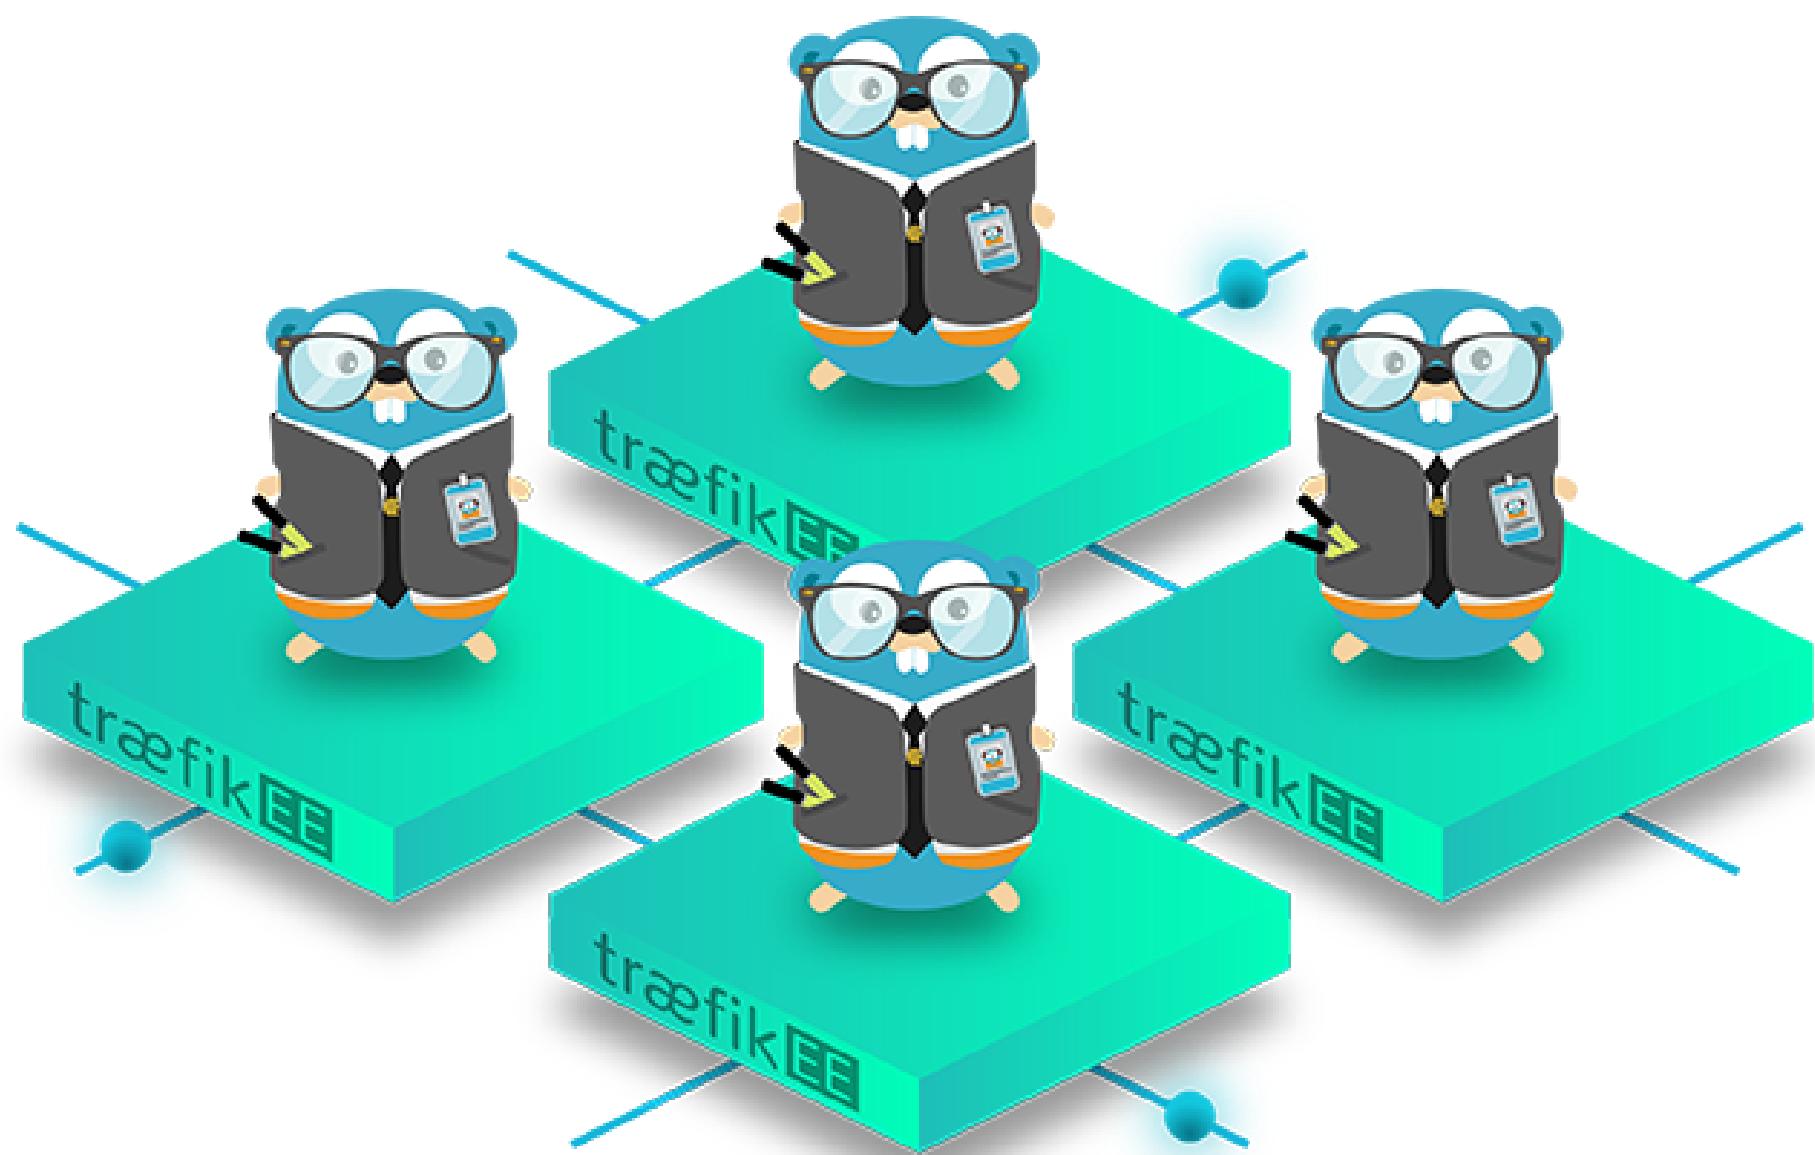

- MESOS
- ZIPKIN
- LIMITING
- KUBERNETES
- Dynamic Metrics
- HTTP
- CERTIFICATE
- ERROR
- TLS Reverse-Proxy
- HEADERS
- GRPC
- DYNAMIC/WILDCARD
- Security Configurations
- Tracing PROXY
- SECRETS
- PROMETHEUS
- JAEGER
- WEBSOCKETS
- SSL
- FORWARD REDIRECTS
- DOCKER
- PROTOCOL
- CHECKS
- CLUSTER AUTH
- HSTS
- RATE
- CONSUL
- SWARM MODE
- S3
- BREAKERS
- CIRCUIT

INTERNET

TO YOUR INFRA

As Simple As Traefik

- Install it:

```
# Cluster Installation
traefikeectl install \
  --licensekey="SuperSecretLicence" \
  --dashboard \
  --kubernetes # Or --swarm
```

- Configure it:

```
# Routing Configuration, same as Traefik's
traefikeectl deploy \
  --acme.email=ssl-admin@mycompany.org
  --acme.tlsChallenge
  ...
```

But
What About Open Source?

BACK toTRAEFIK 2.8

PART →

Revamped Documentation

The screenshot shows the Traefik documentation website. At the top, there's a navigation bar with a search bar, a GitHub link (21k Stars - 2.1k Forks), and a logo. On the left, a sidebar lists navigation links: Welcome, Getting Started, Configuration Discovery, Routing & Load Balancing, HTTPS & TLS, Middlewares, Operations, Observability, Contributing, and Glossary. The main content area features a large, colorful diagram titled "Welcome". The diagram illustrates Traefik's role as an "Edge Router" that receives requests from the internet (e.g., API.DOMAIN.COM, DOMAIN.COM/WEB, BACKOFFICE.DOMAIN.COM) and routes them to various infrastructure components like Kubernetes, Mesos, Docker, and Backoffice servers. It highlights features such as automatic and dynamic routing, load balancing, auto-discovery, metrics tracing, and logs. Below the diagram, a text block describes Traefik as an open-source Edge Router.

Welcome

FROM THE INTERNET

API.DOMAIN.COM
DOMAIN.COM/WEB
BACKOFFICE.DOMAIN.COM

træfik

To Your Infrastructure

KUBERNETES
MESOS
PRIVATE SERVER

BACKOFFICE SERVER - 1
BACKOFFICE SERVER - 2

DOCKER

Metrics
Tracing
Logs

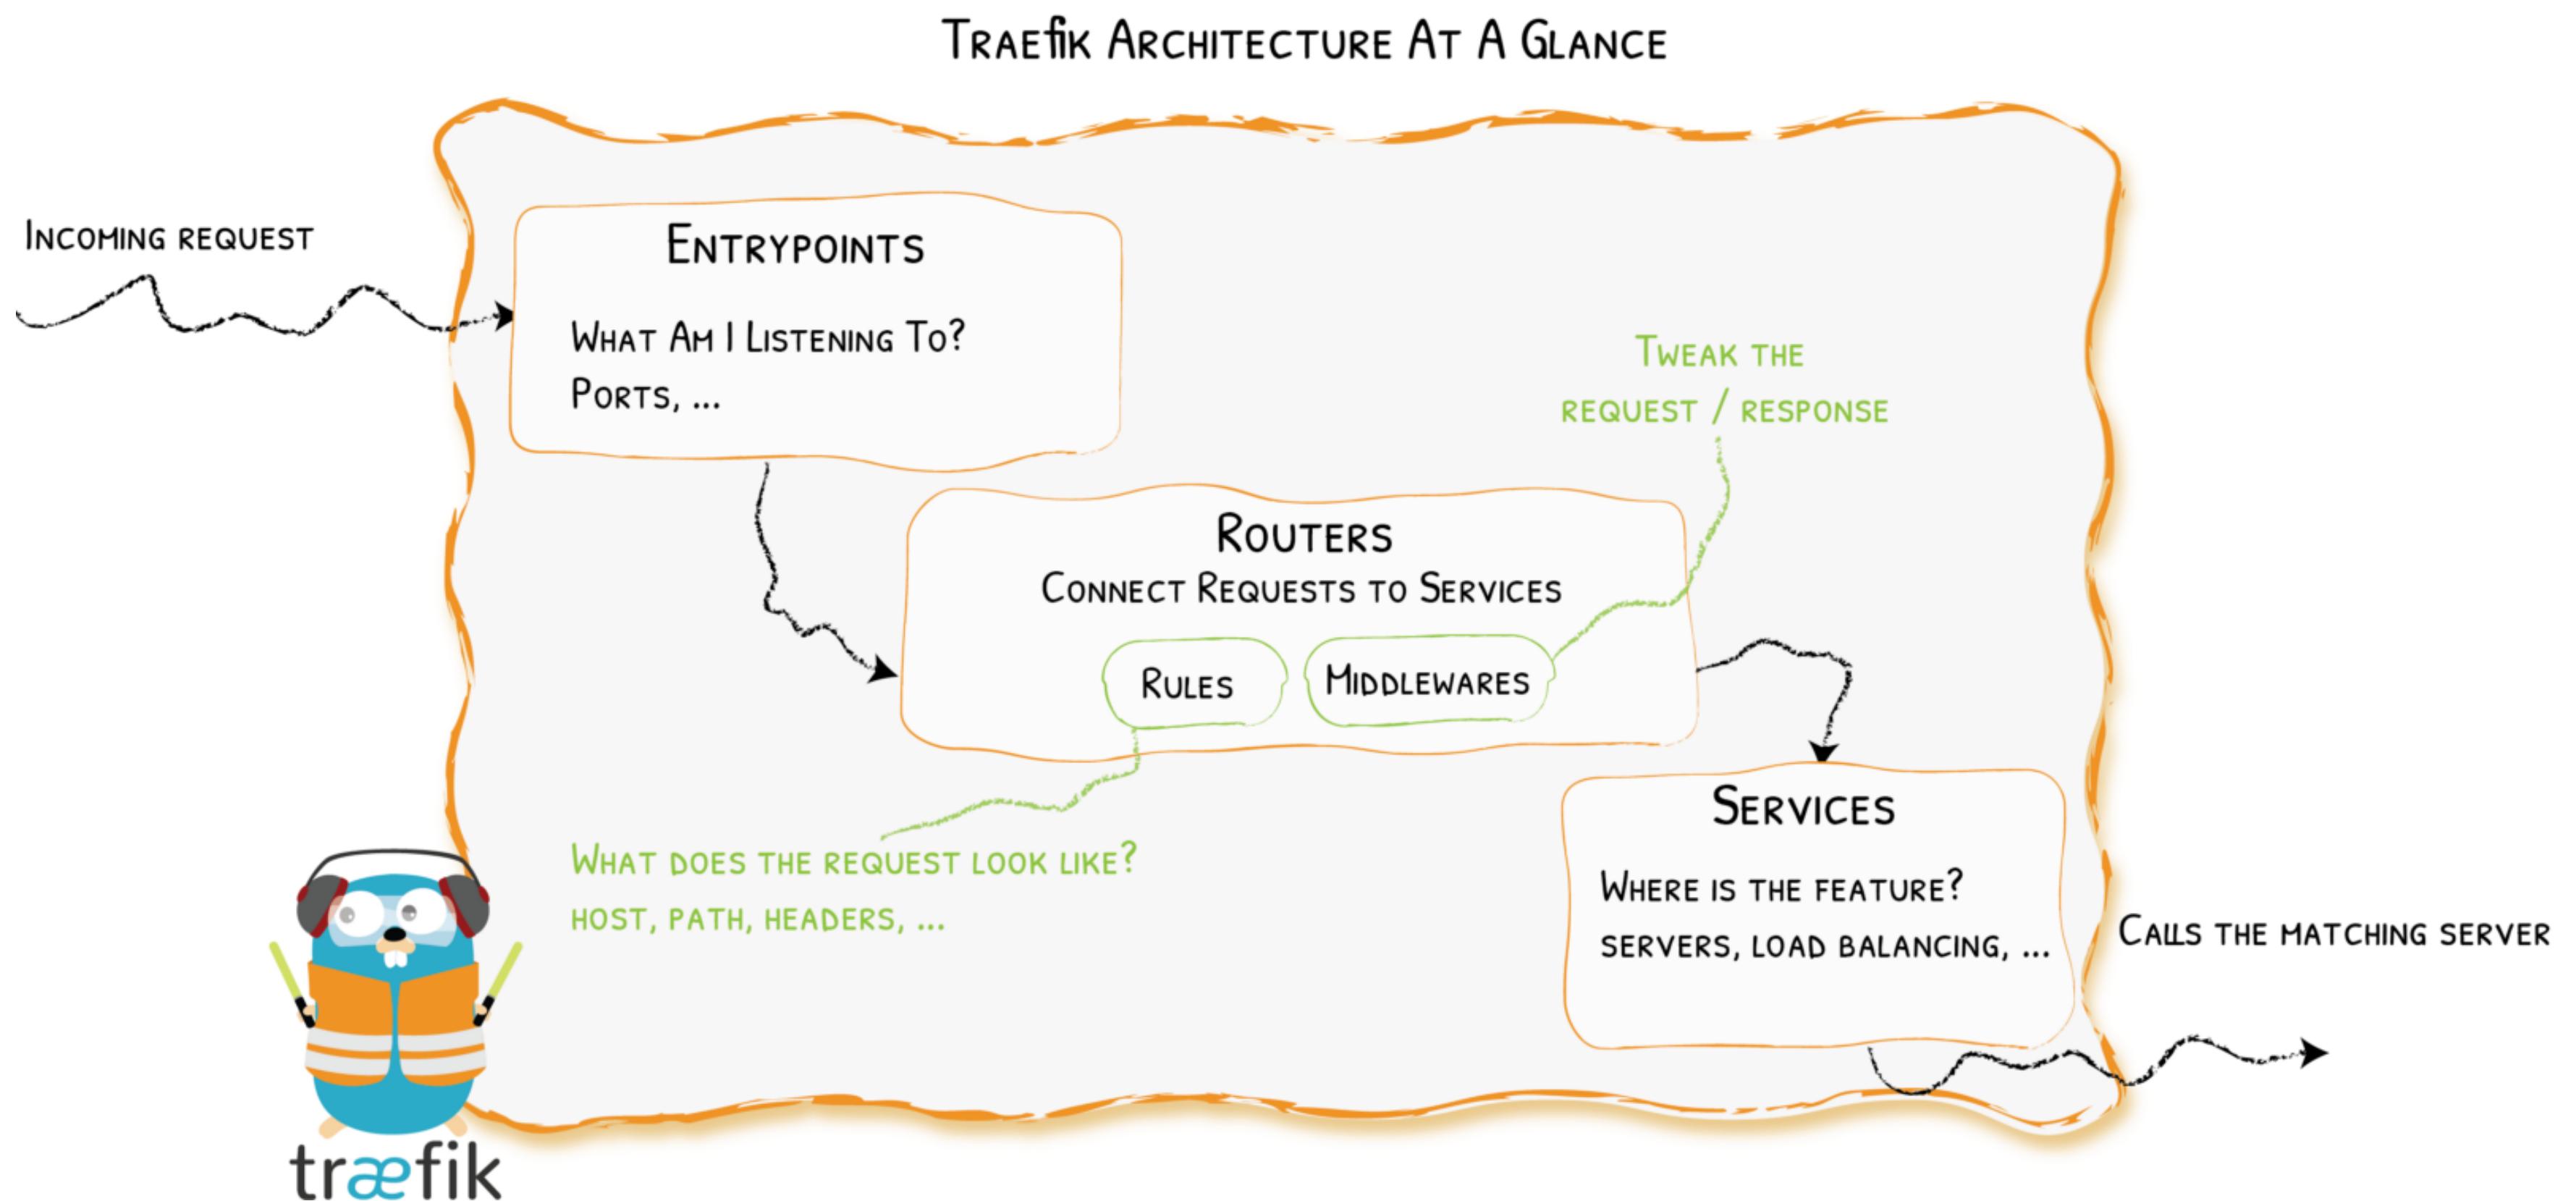

AUTOMATIC & DYNAMIC ROUTING

Load
Balancing

Auto
Discovery

Traefik is an [open-source](#) *Edge Router* that makes publishing your services a fun and easy experience. It receives requests on behalf of your system and finds out which components are responsible for handling them.

Clarified Concepts

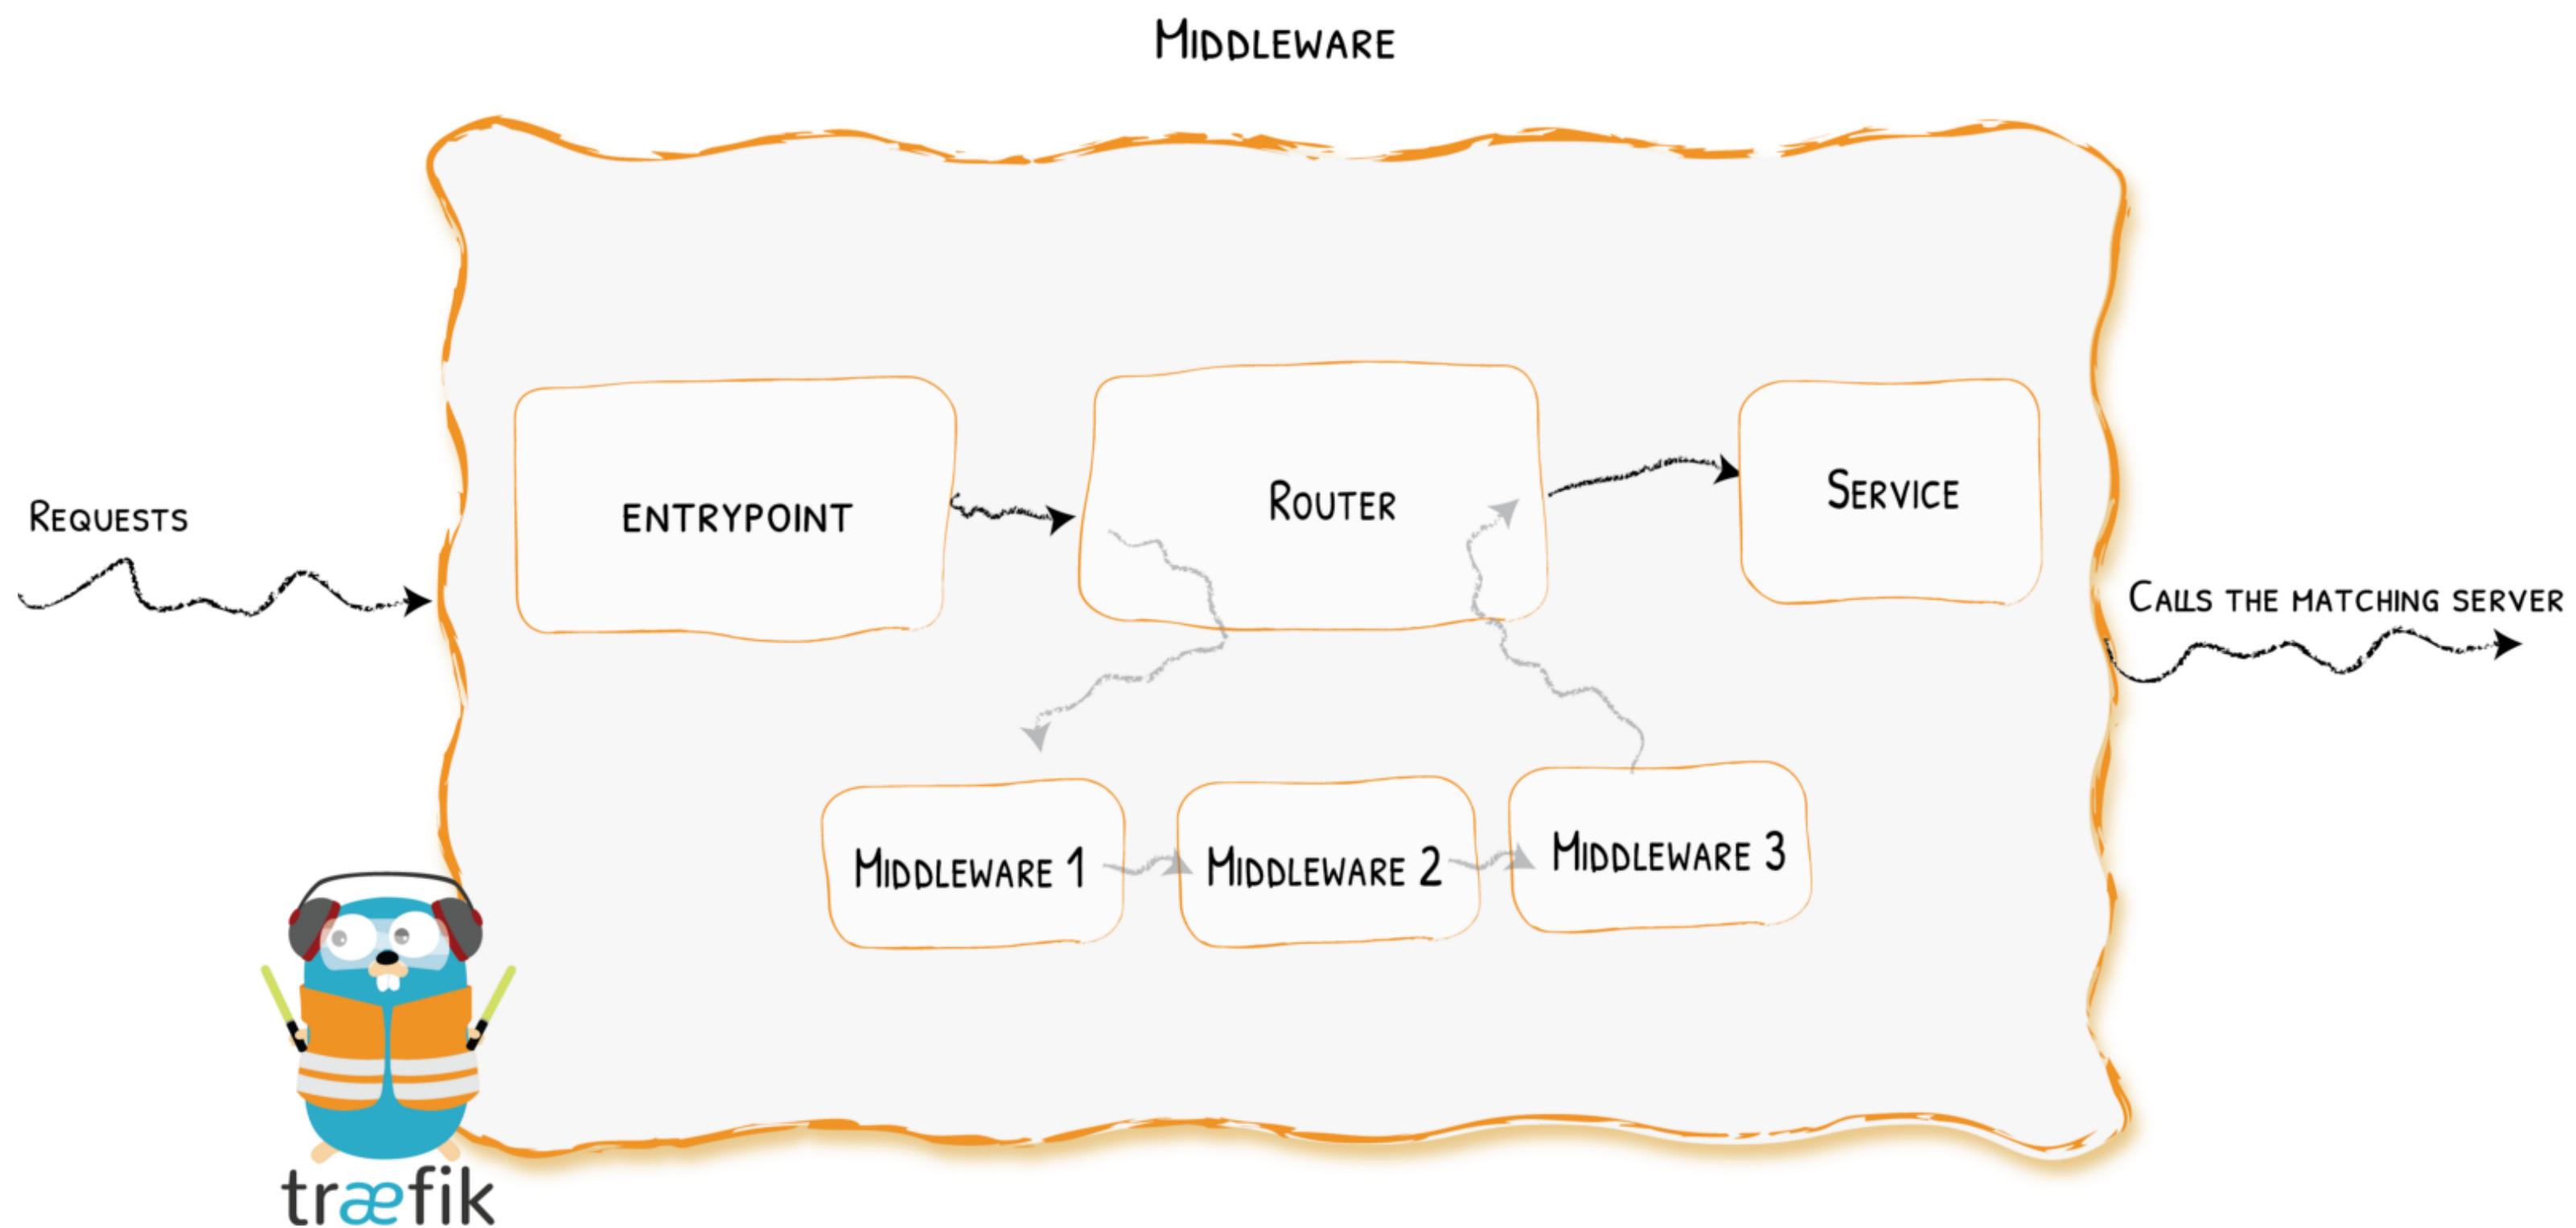

Expressive Routing Rule Syntax

```
# Send both requests to backend service:  
#   https://api.mycompany.com/v2  
#   https://api-v2.mycompany.com  
  
rule=(Host('api.mycompany.com') && PathPrefix('/v2')) || Host('api-v2.mycompany.com')
```

Middlewares

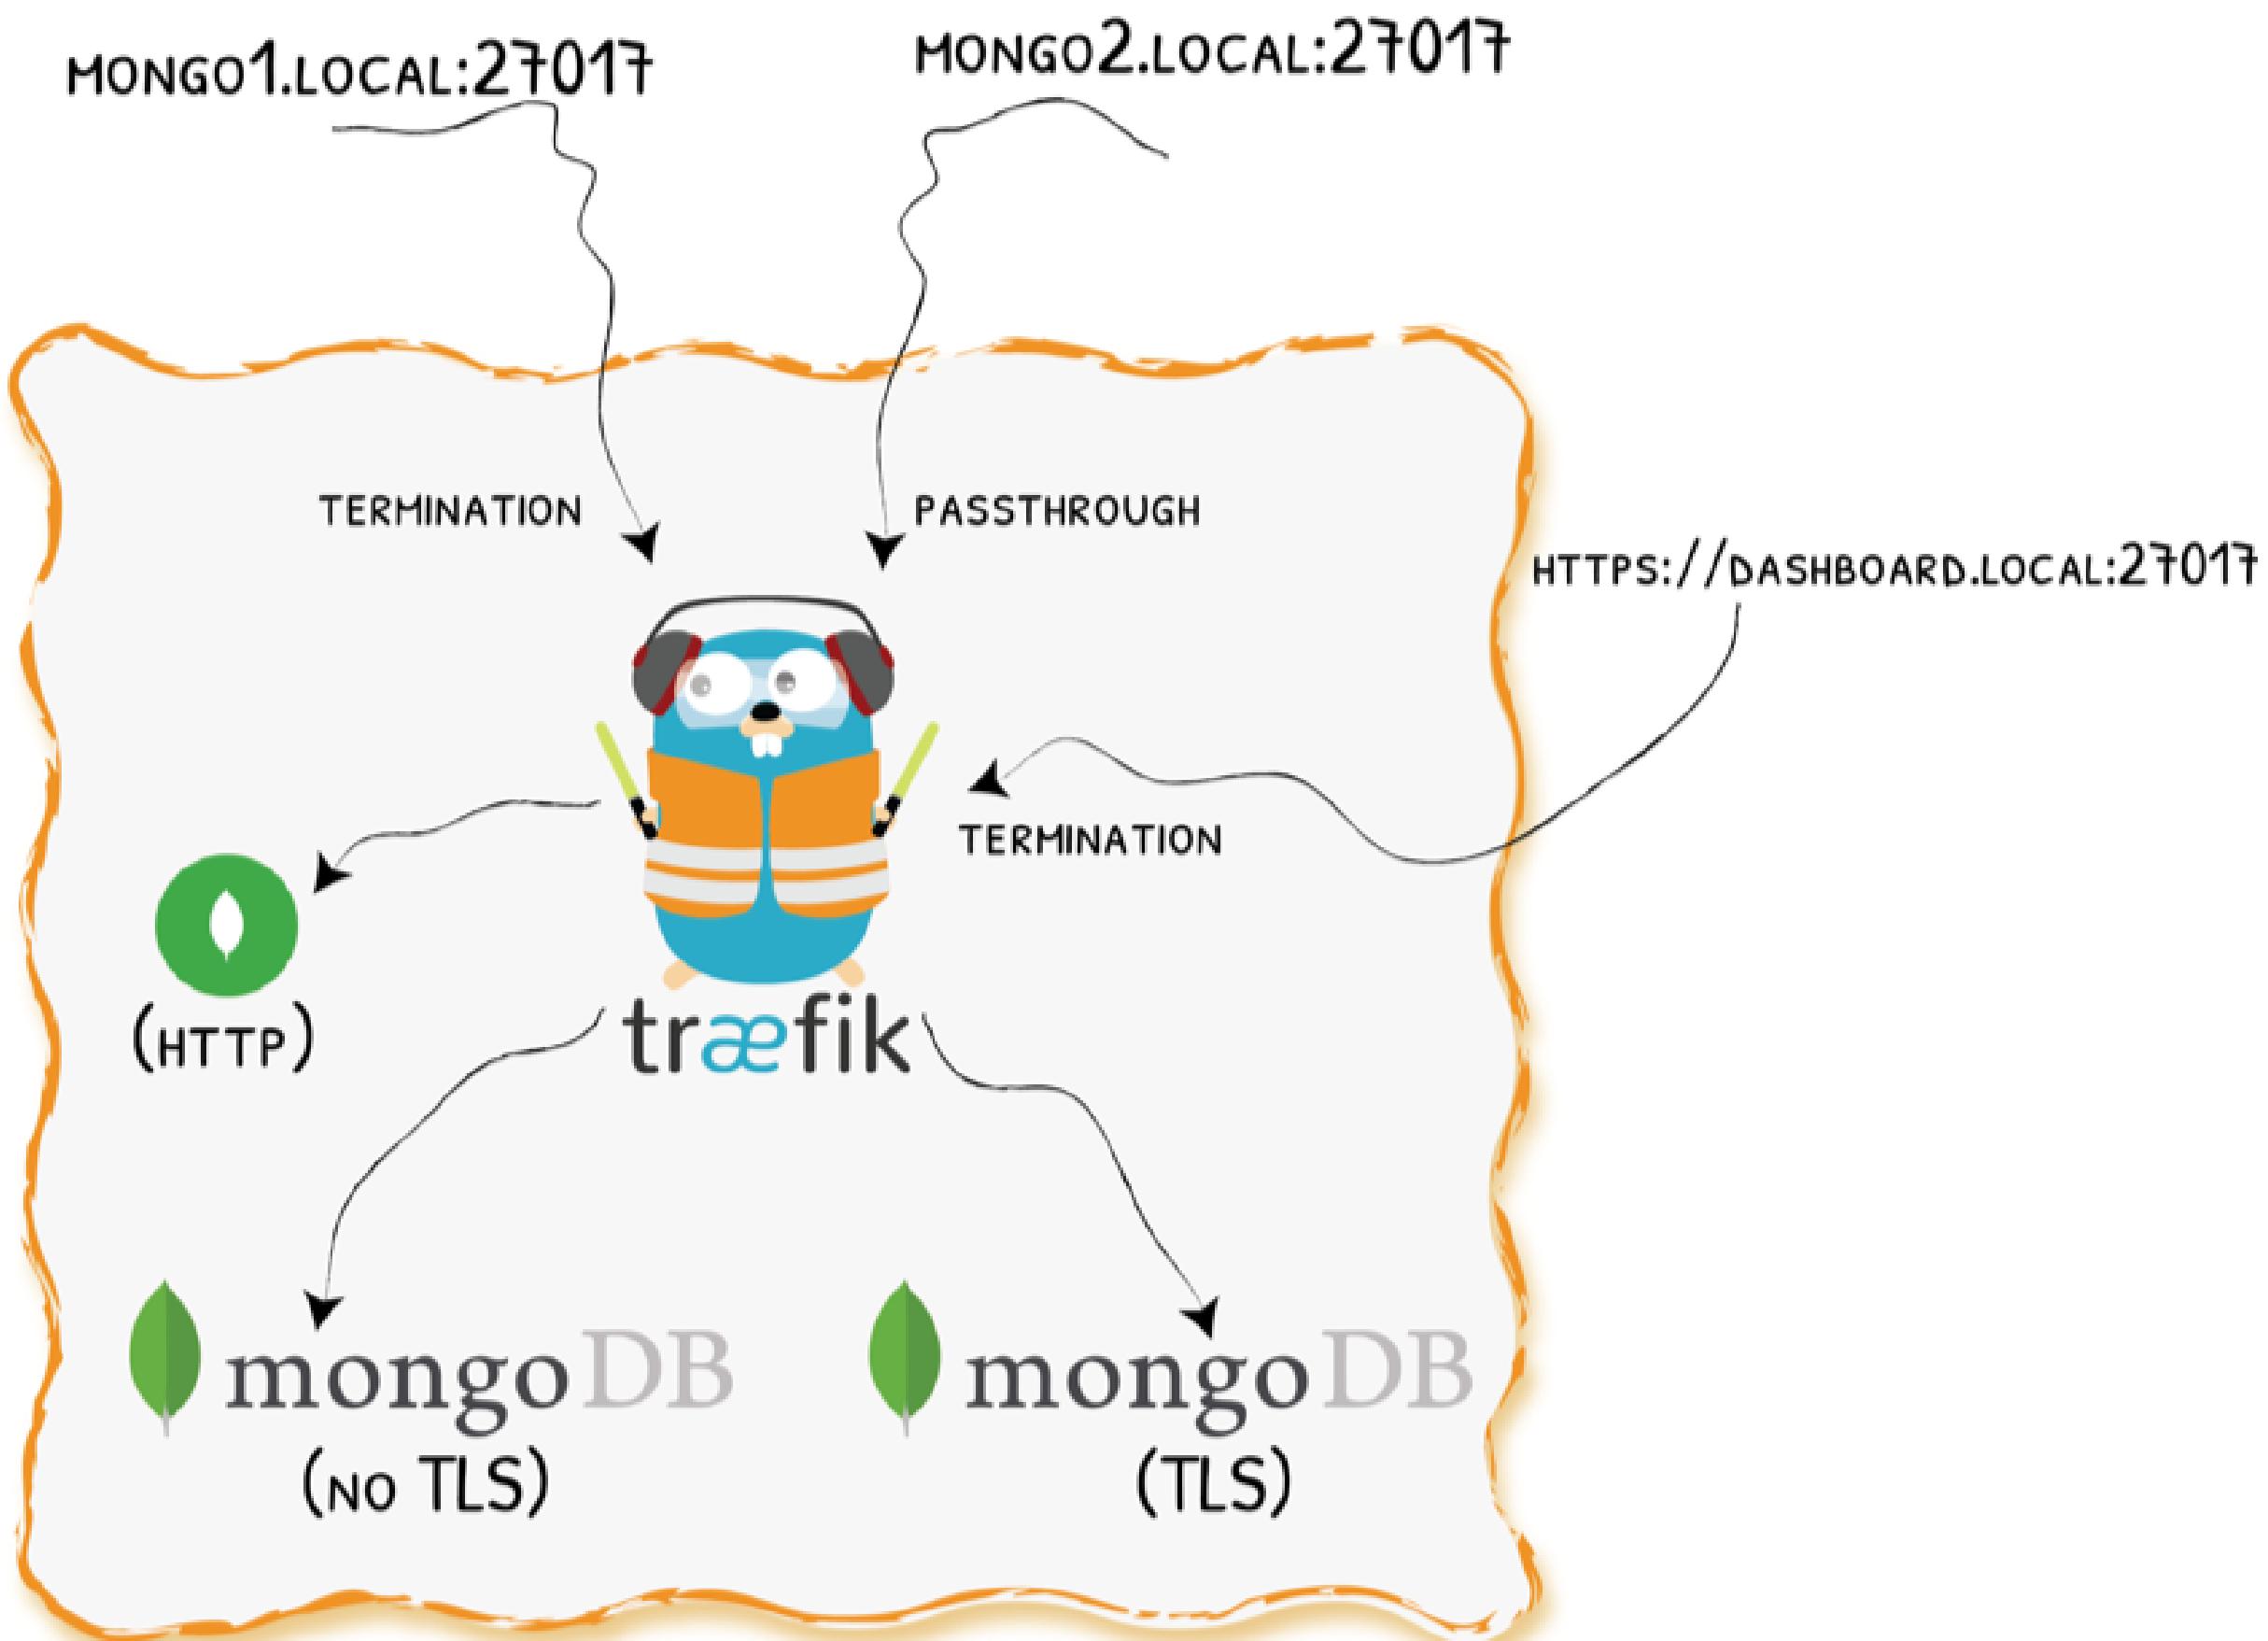

🌐 CRD - Custom Resources Definition

```
apiVersion: traefik.containo.us/v1alpha1
kind: IngressRoute
spec:
  entrypoints:
    - web
    - web-secure
  routes:
    - match: Host(`traefik.io`) && PathPrefix(`/foo`)
      kind: Rule
      services:
        - name: whoami1
          port: 80
          strategy: RoundRobin
      middlewares:
        - name: striprefix
    - match: Host(`containo.us`) && Method(`POST`)
      kind: Rule
      services:
        - name: whoami2
          port: 80
  tls:
    secretName: supersecret
```

HTTP
&
TCP

Demo

More To Come

- New WebUI
- Newmetrics
- UDP
- YAML
- TLS stores & options
- Canary
