Why Traefik?

Why, Mr Anderson?

Evolution Of Software Design

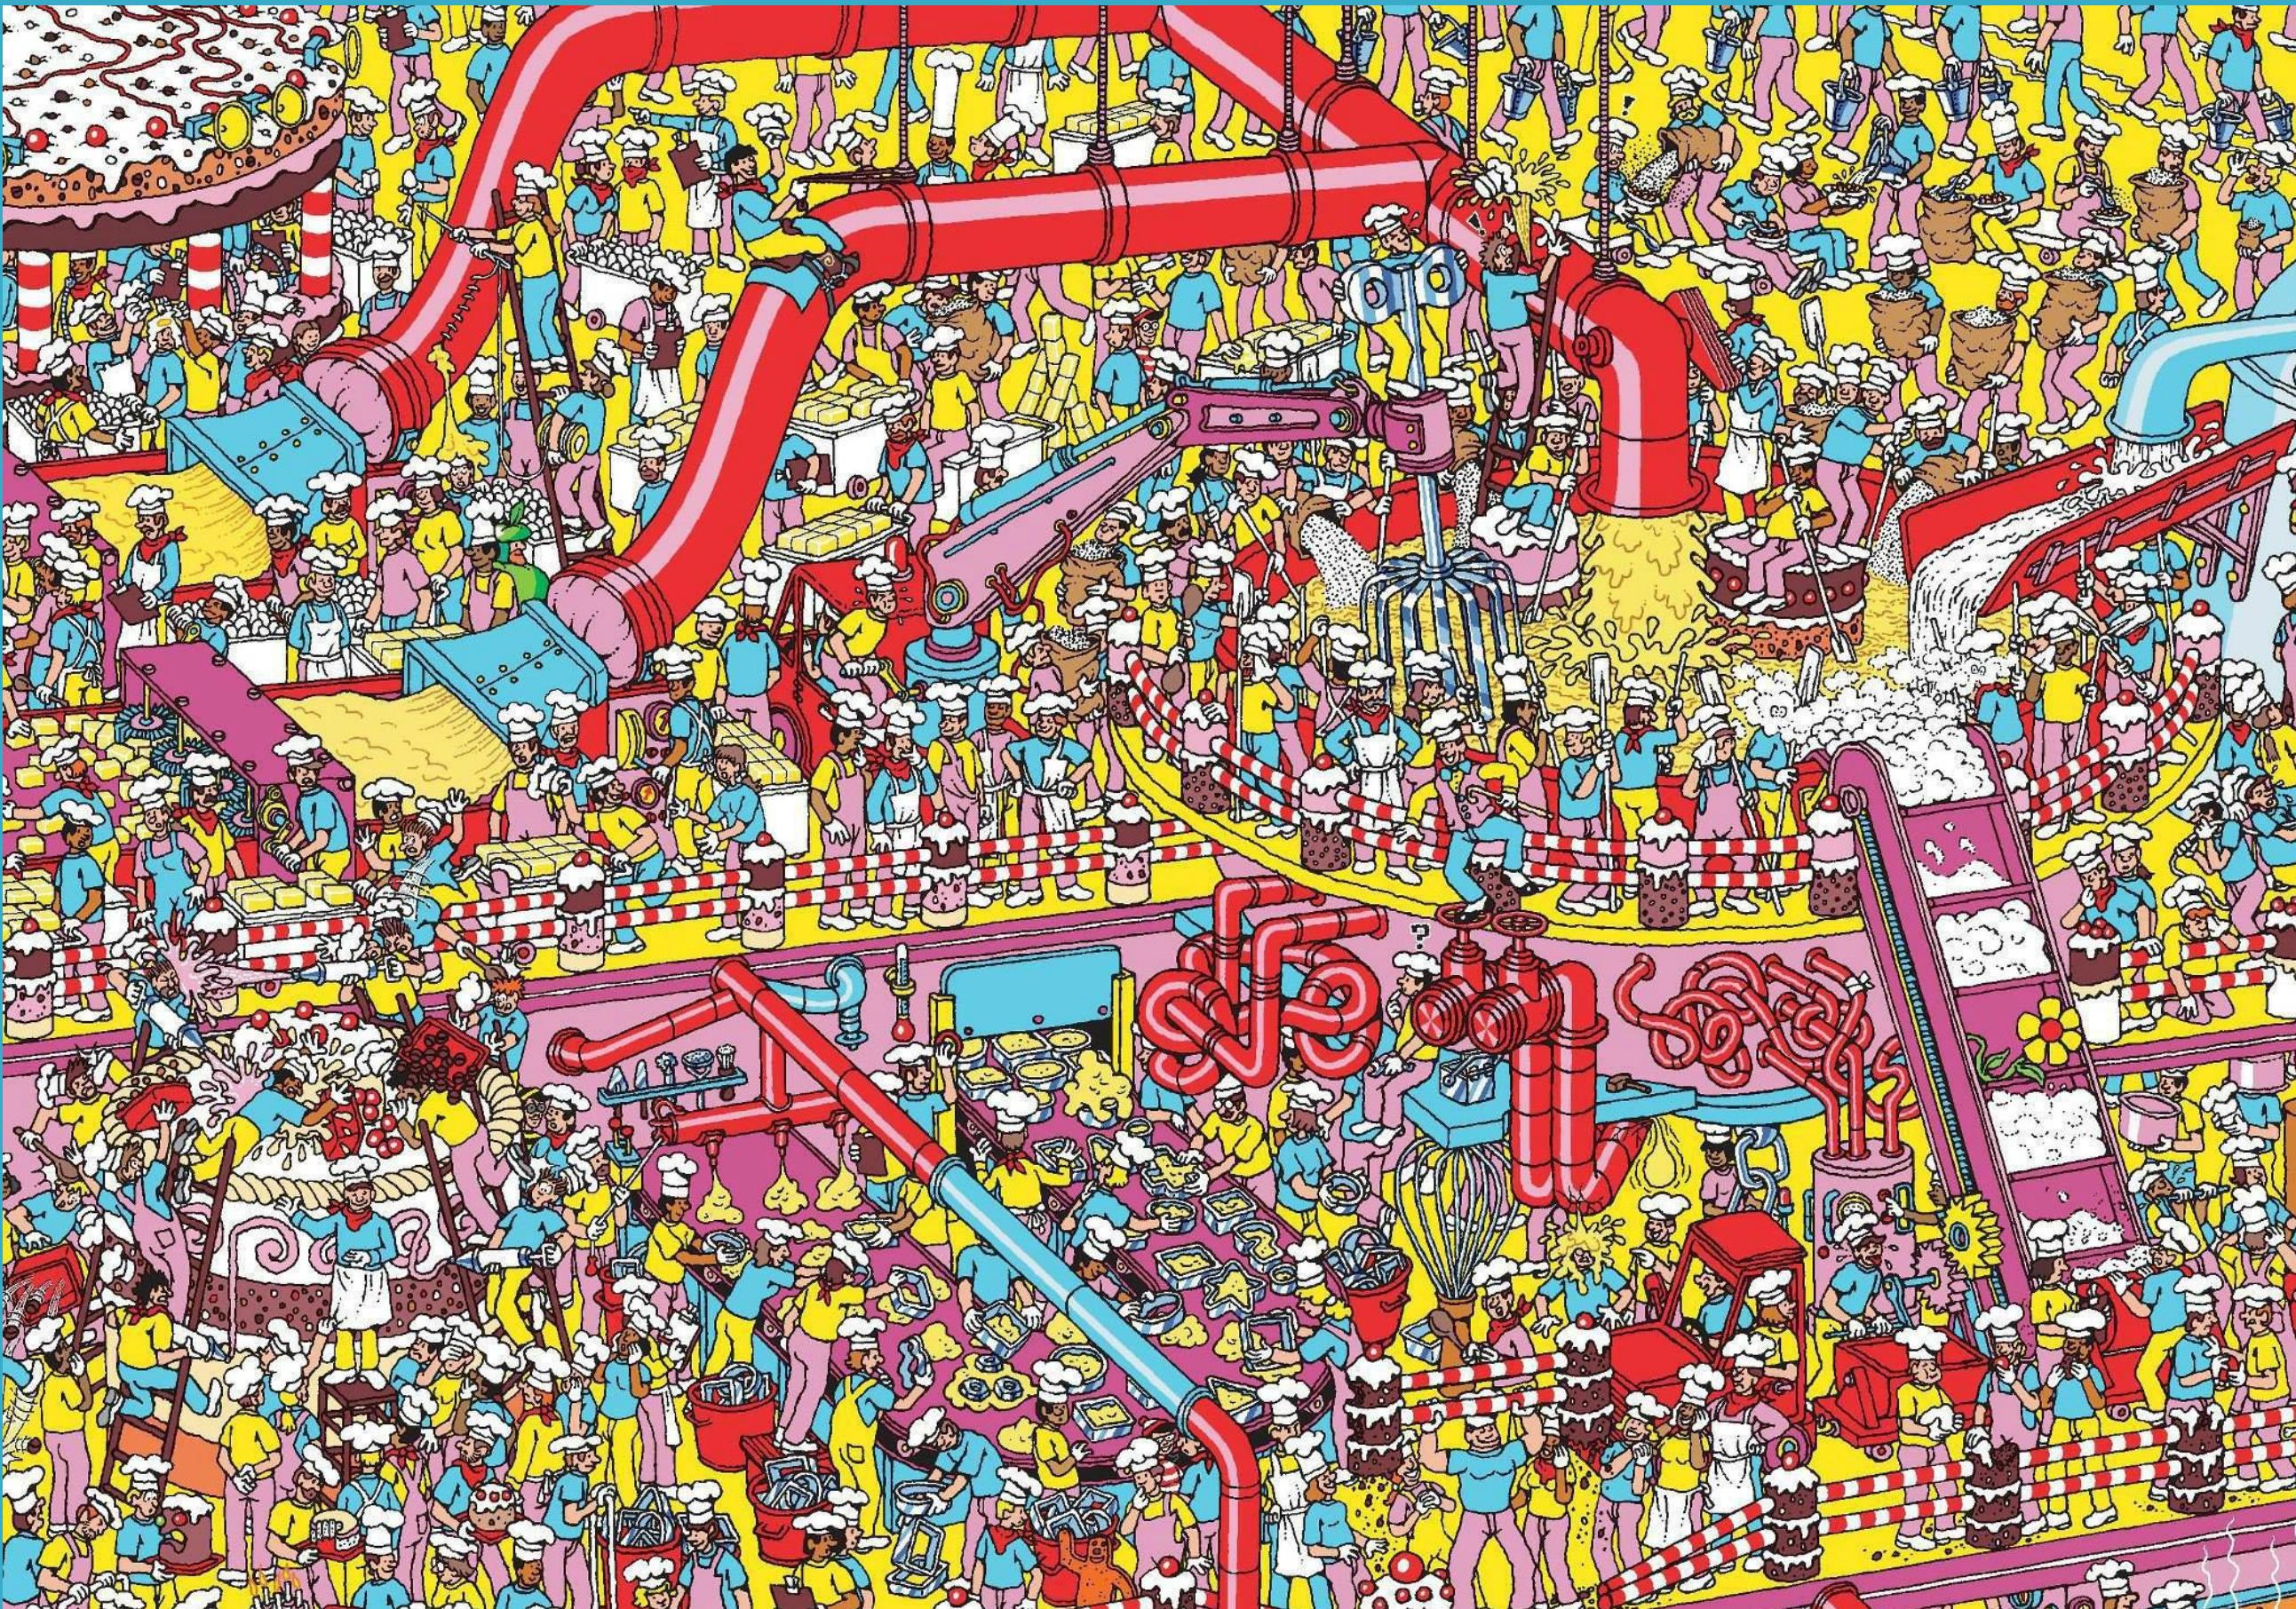

The Premise Of Microservices...

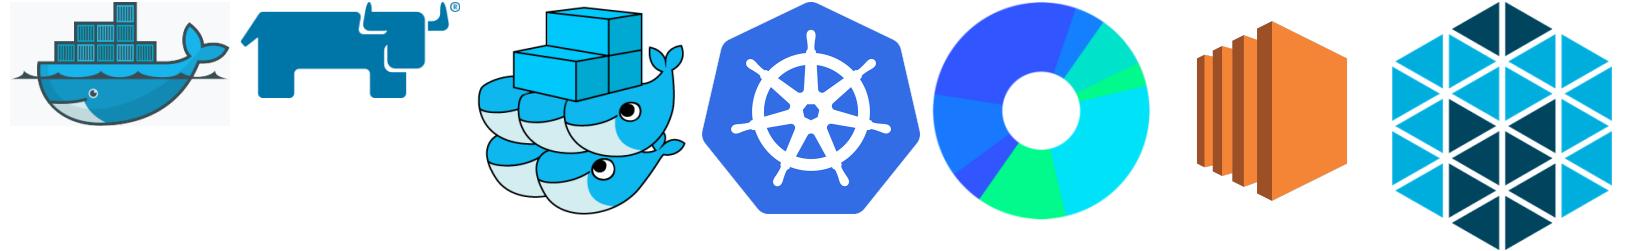

...And What Happens

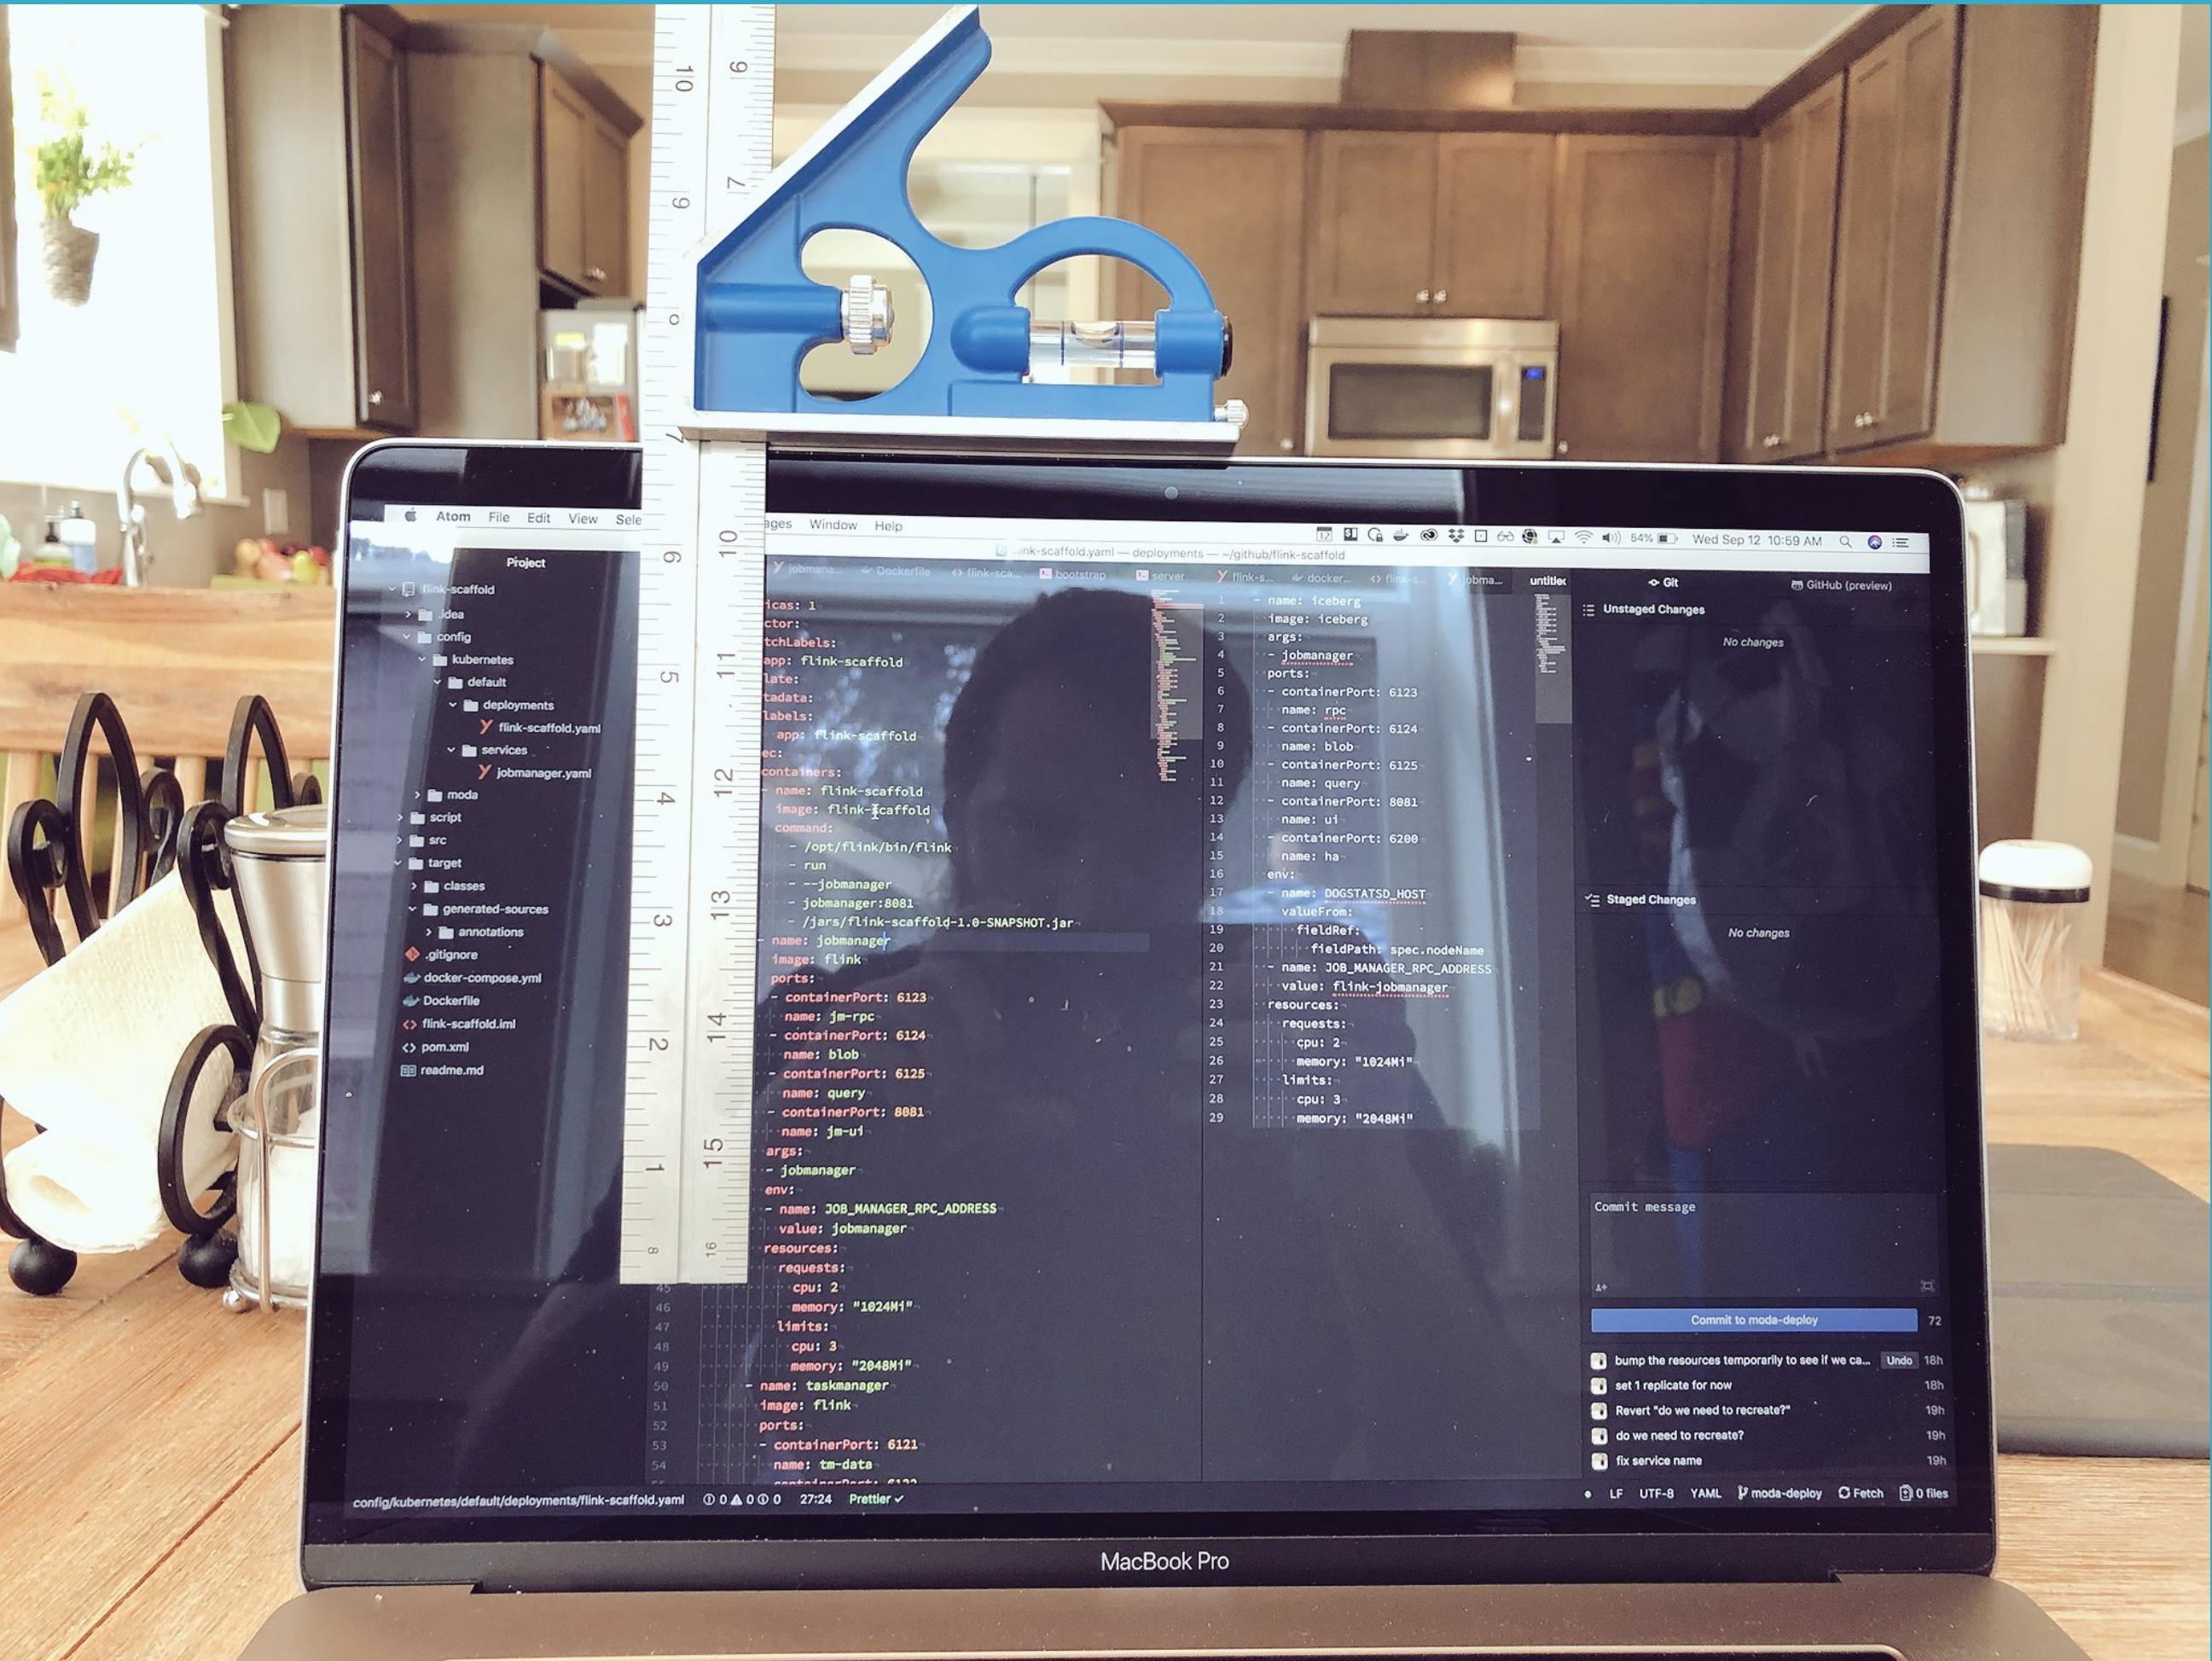

Where Is The Service?

Tools Of The Trade

Source: <https://twitter.com/Caged/status/1039937162769096704>

What If I Told You?

That You Don't Have to Write This Configuration File...?

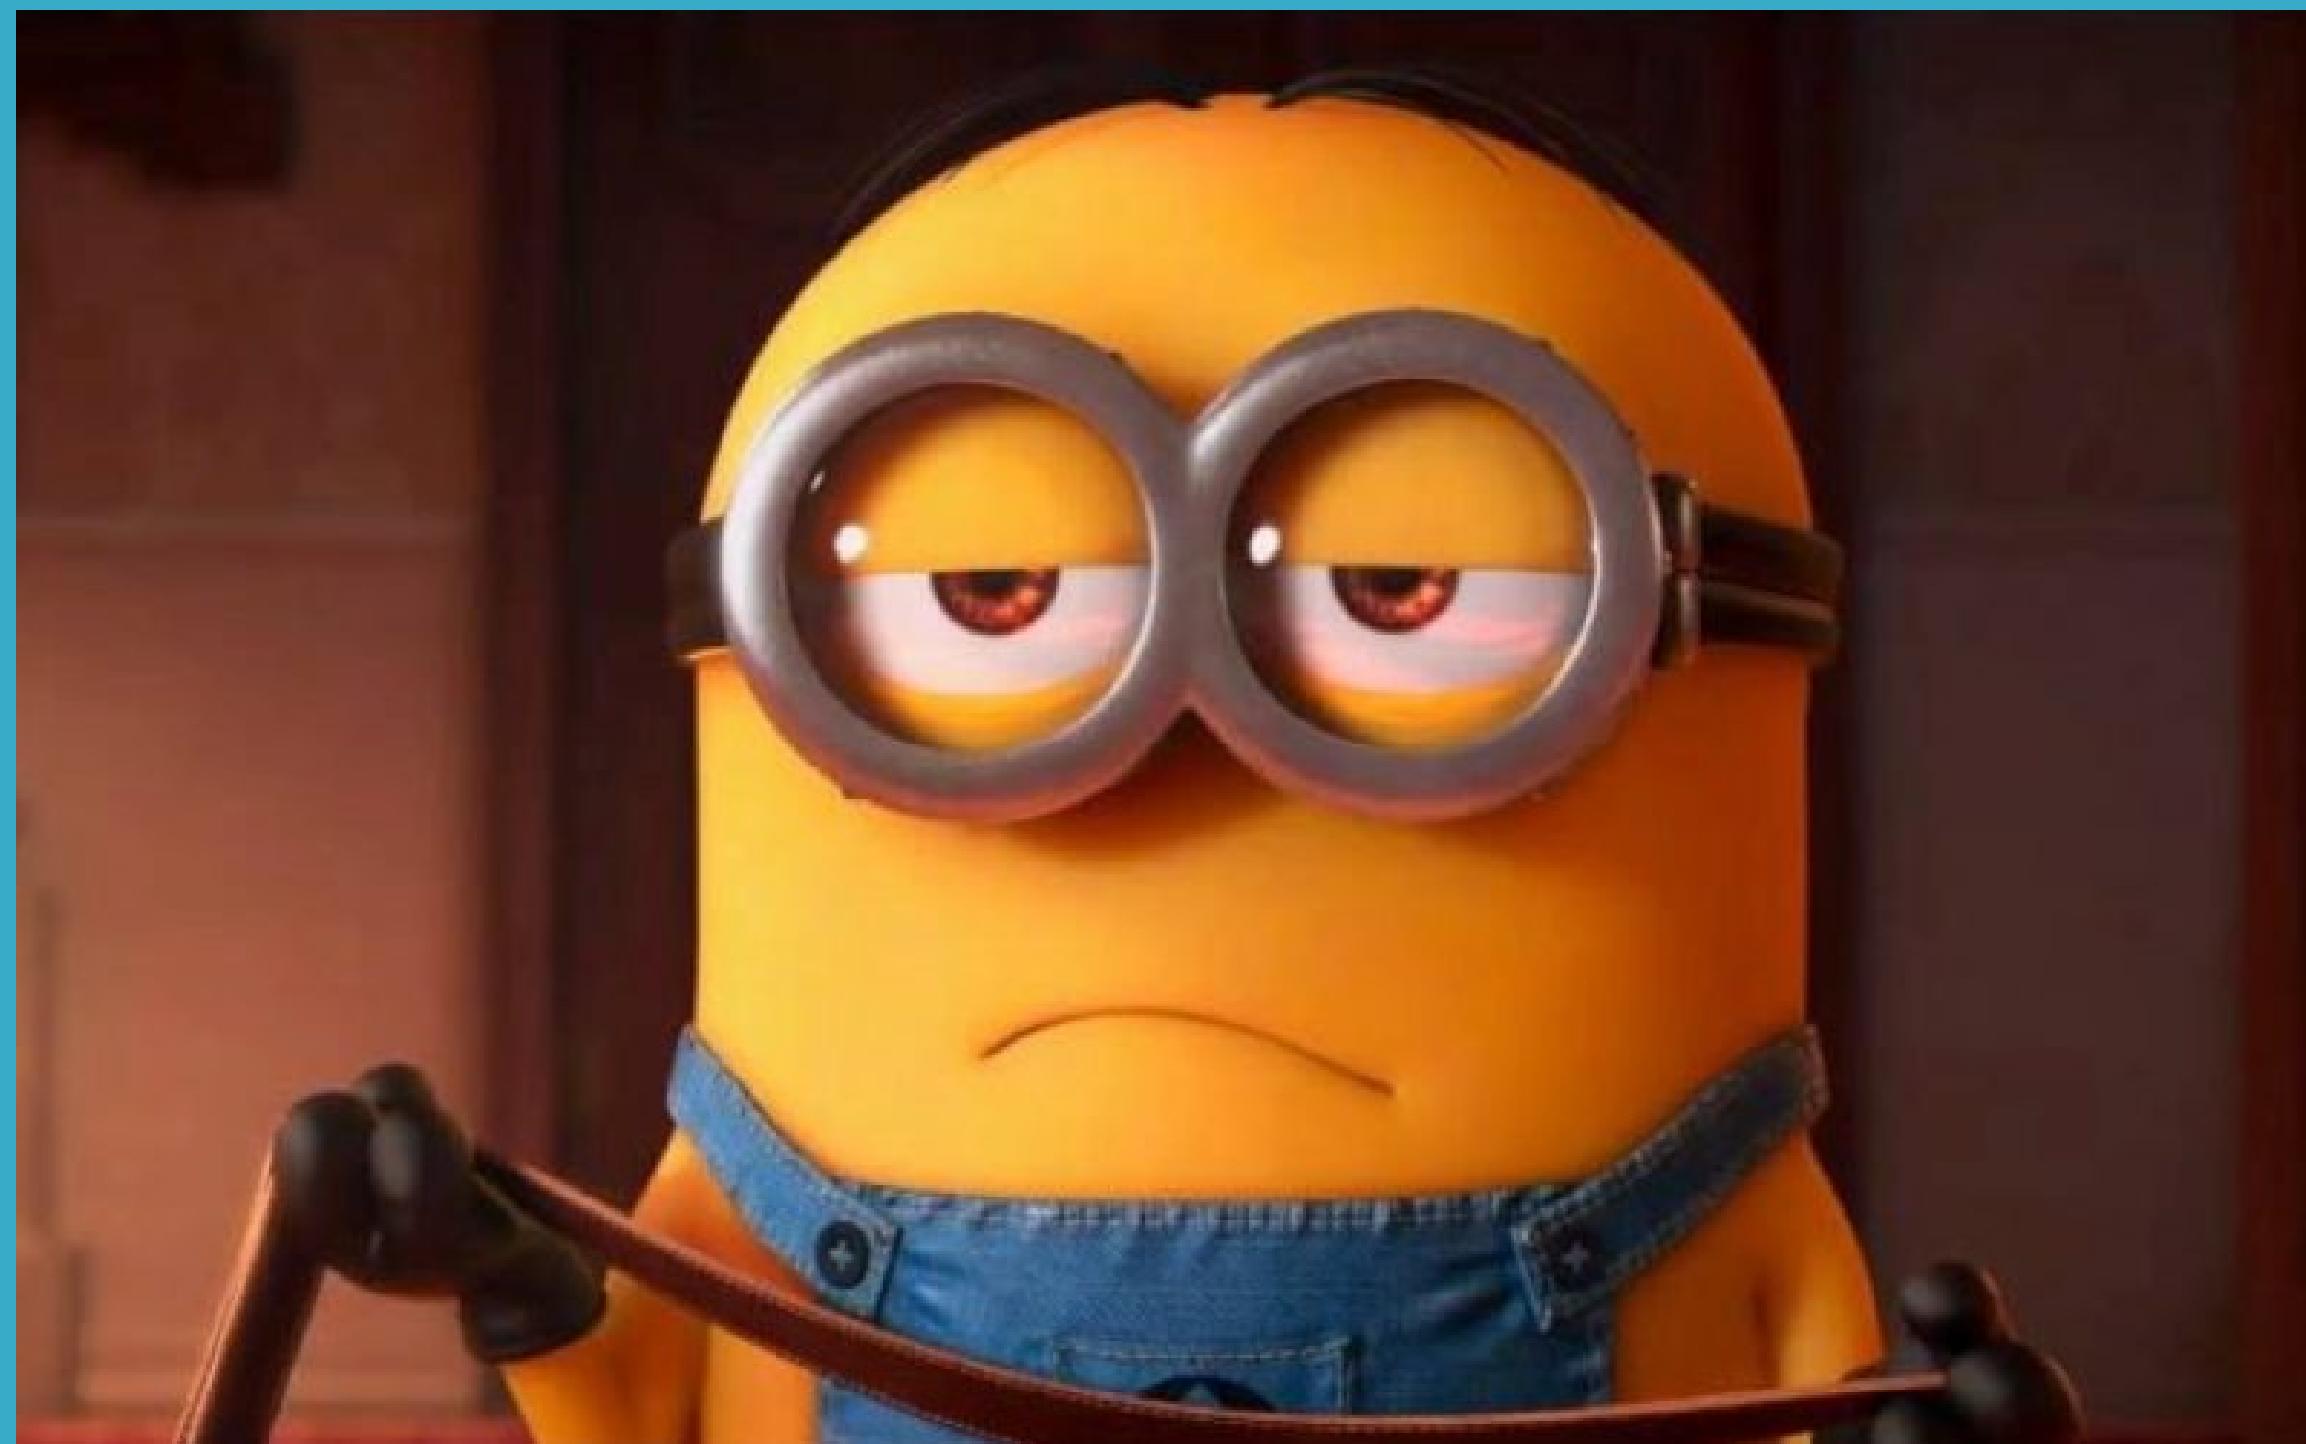

Here Comes Traefik!

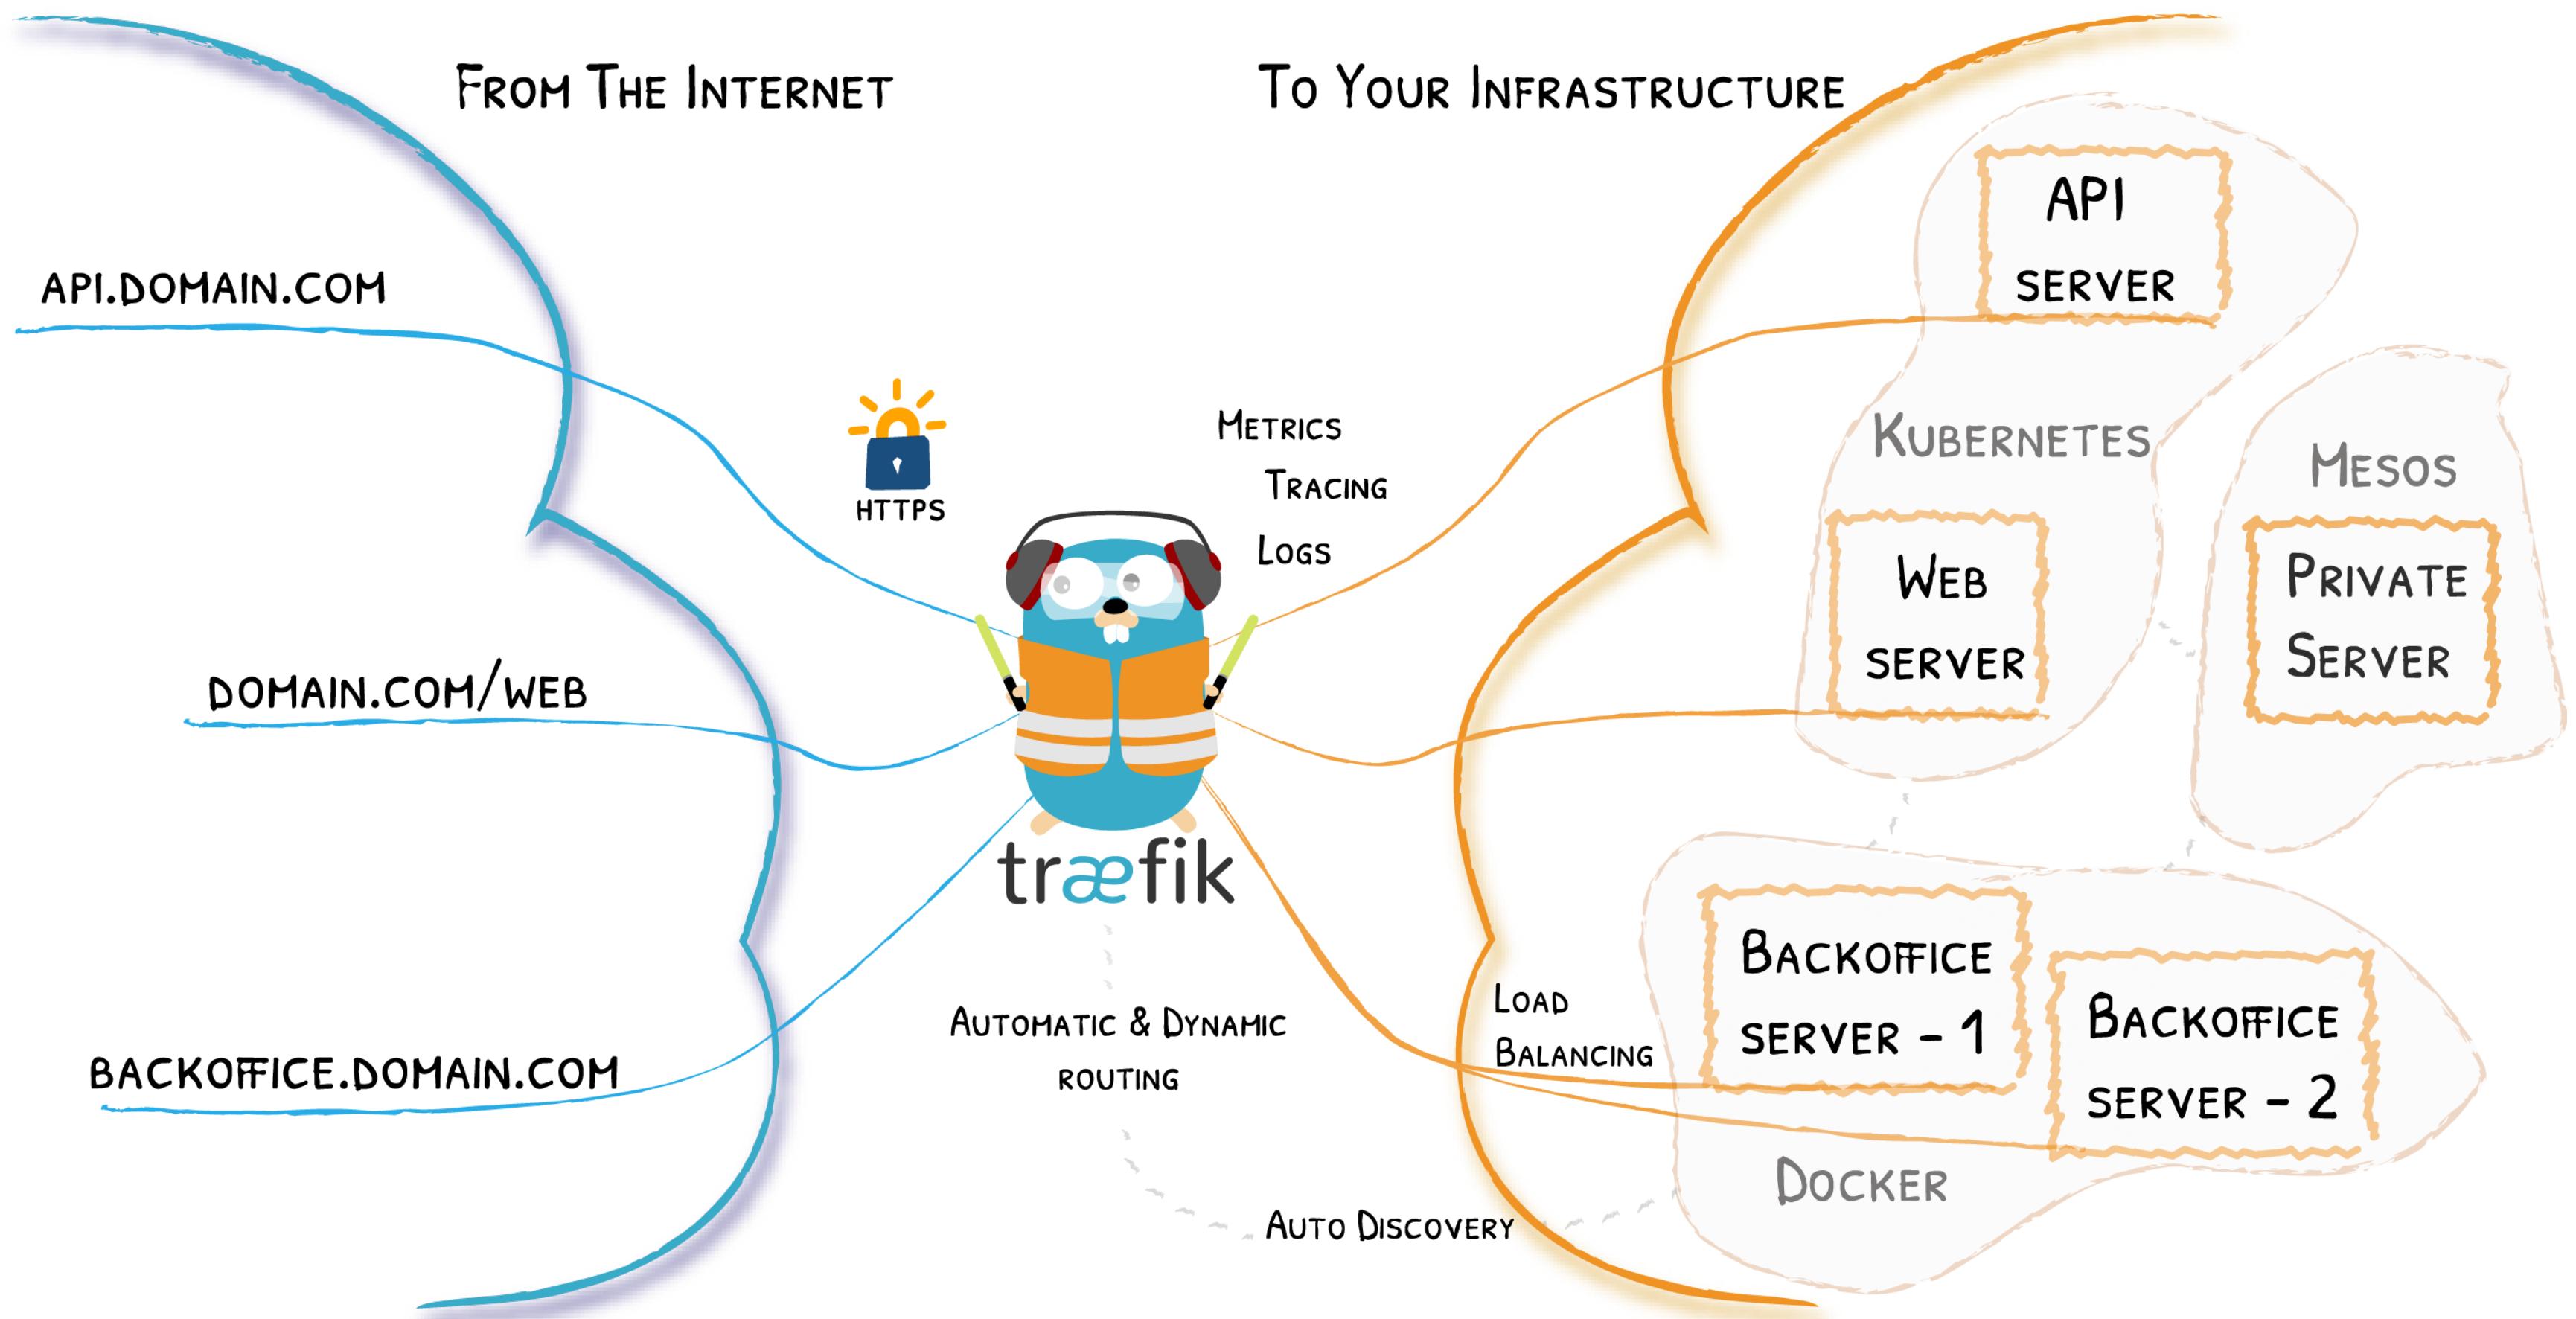

Traefik Project

- MIT License
- Written in Go, a popular language
- 22,000+ 
- 700M+ 
- 350+ 

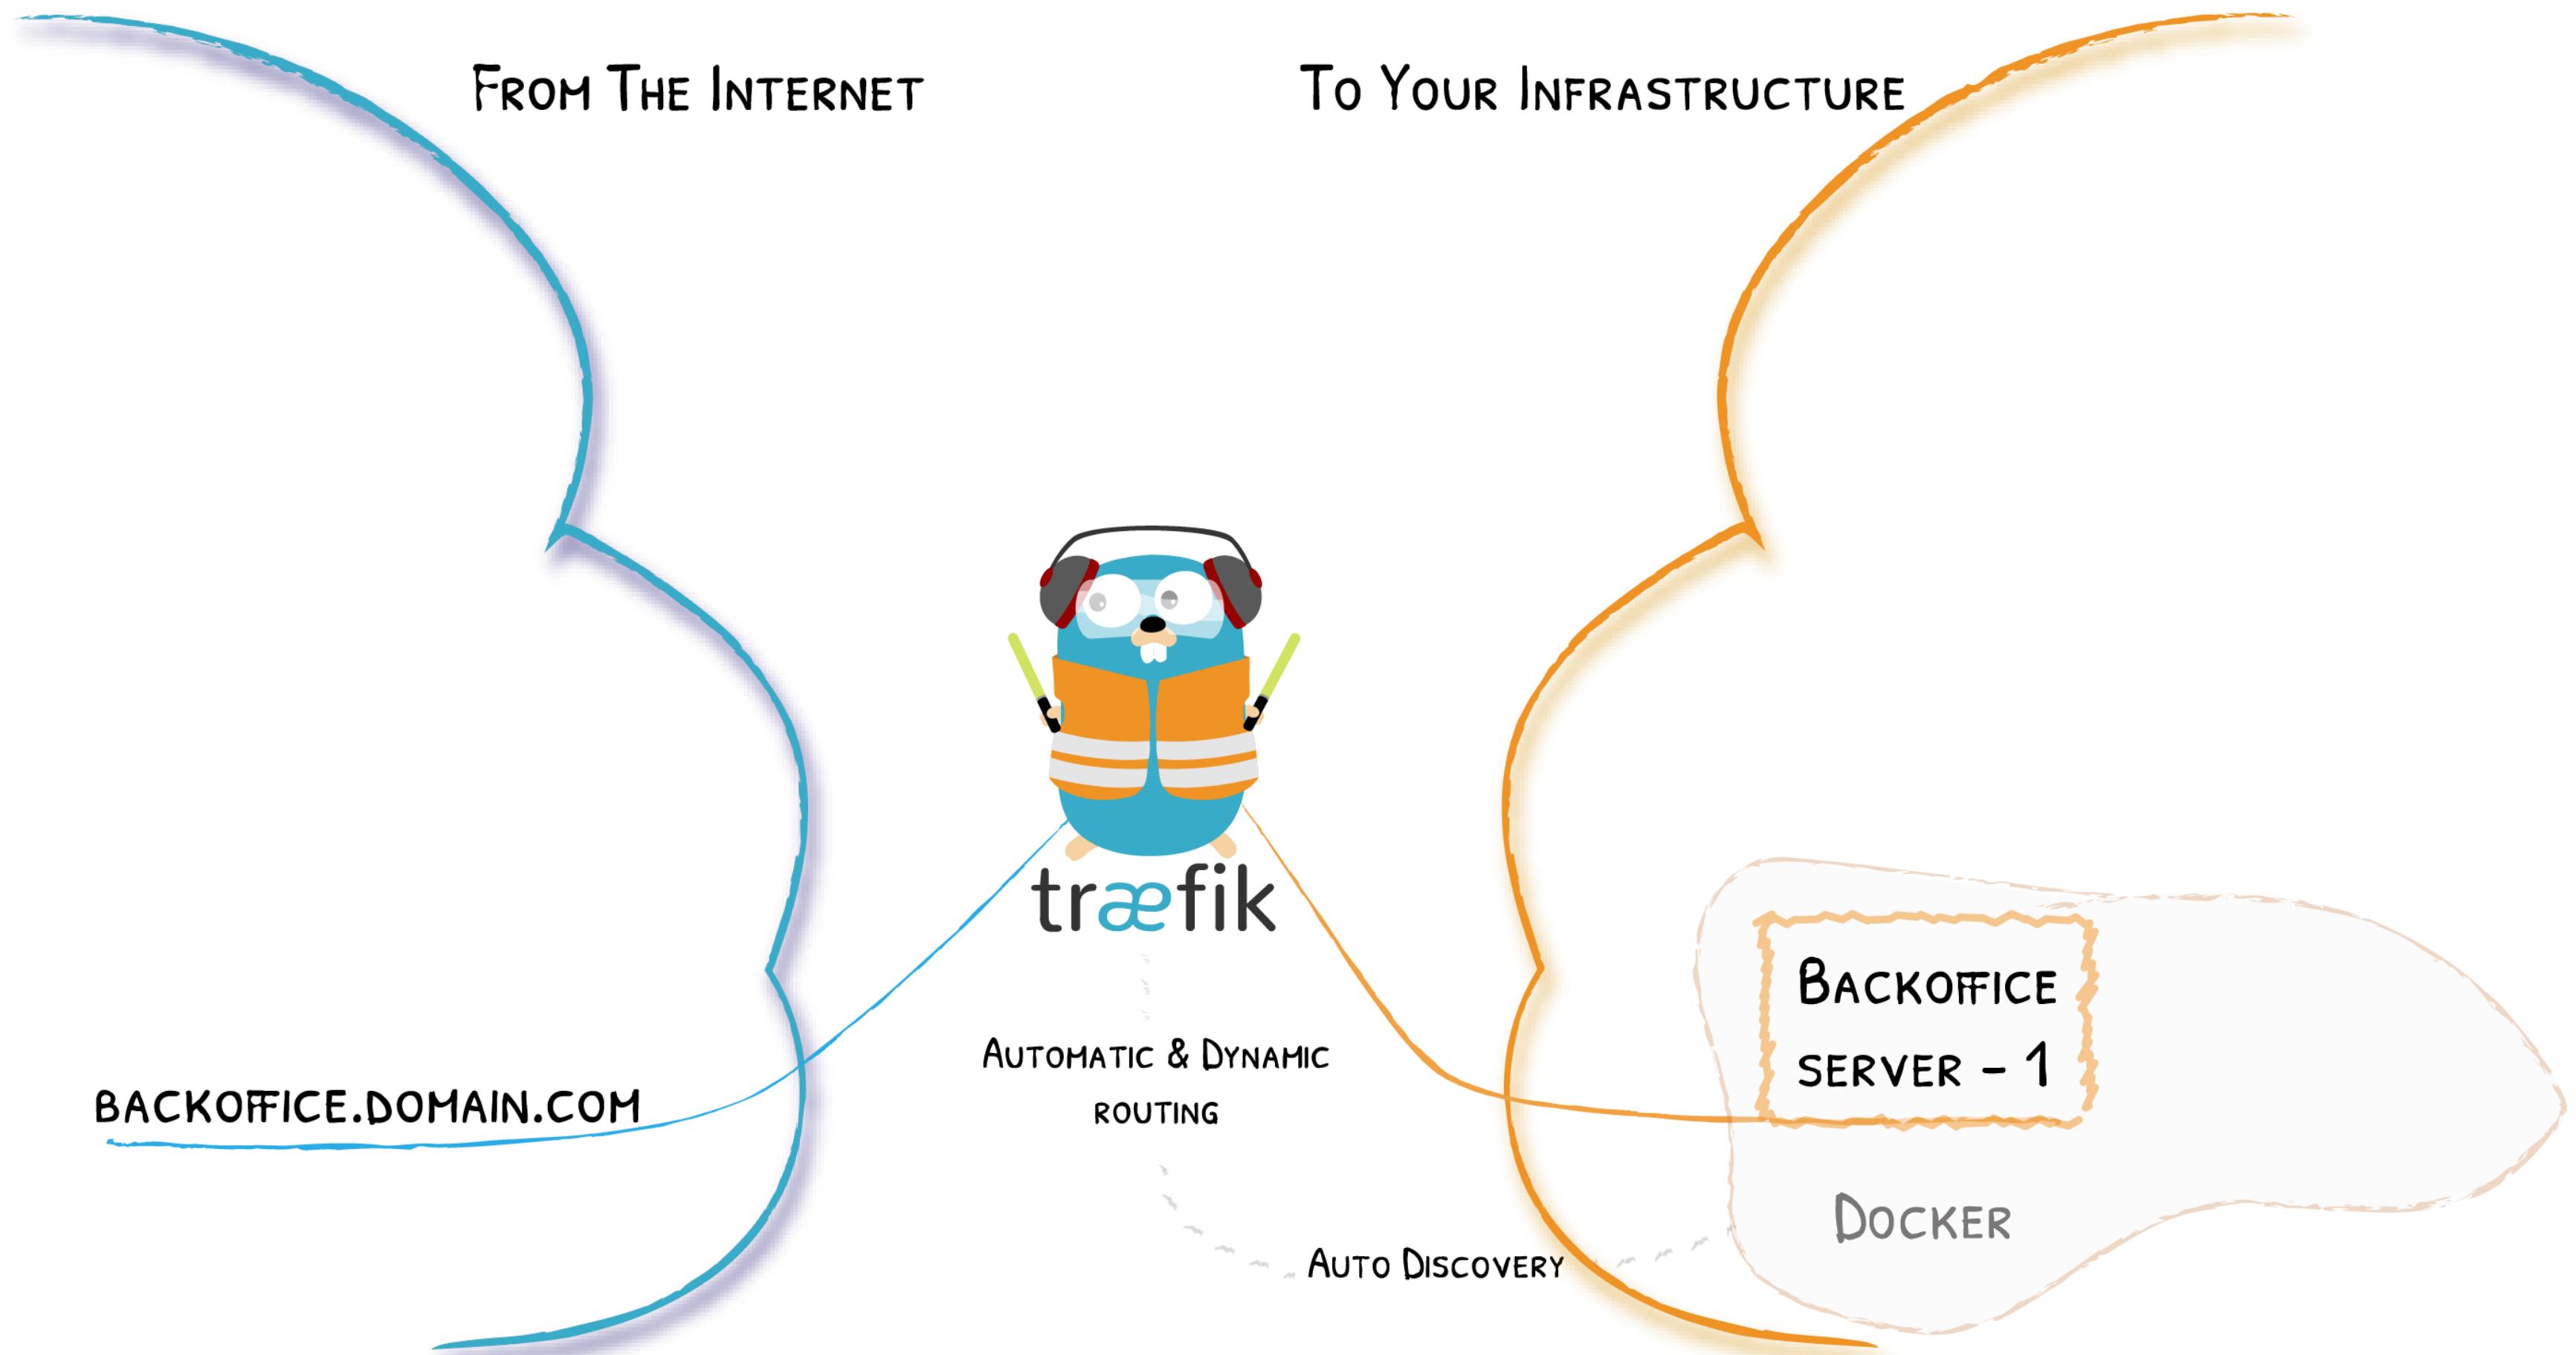

Traefik Core Concepts

Remember The Diagram?

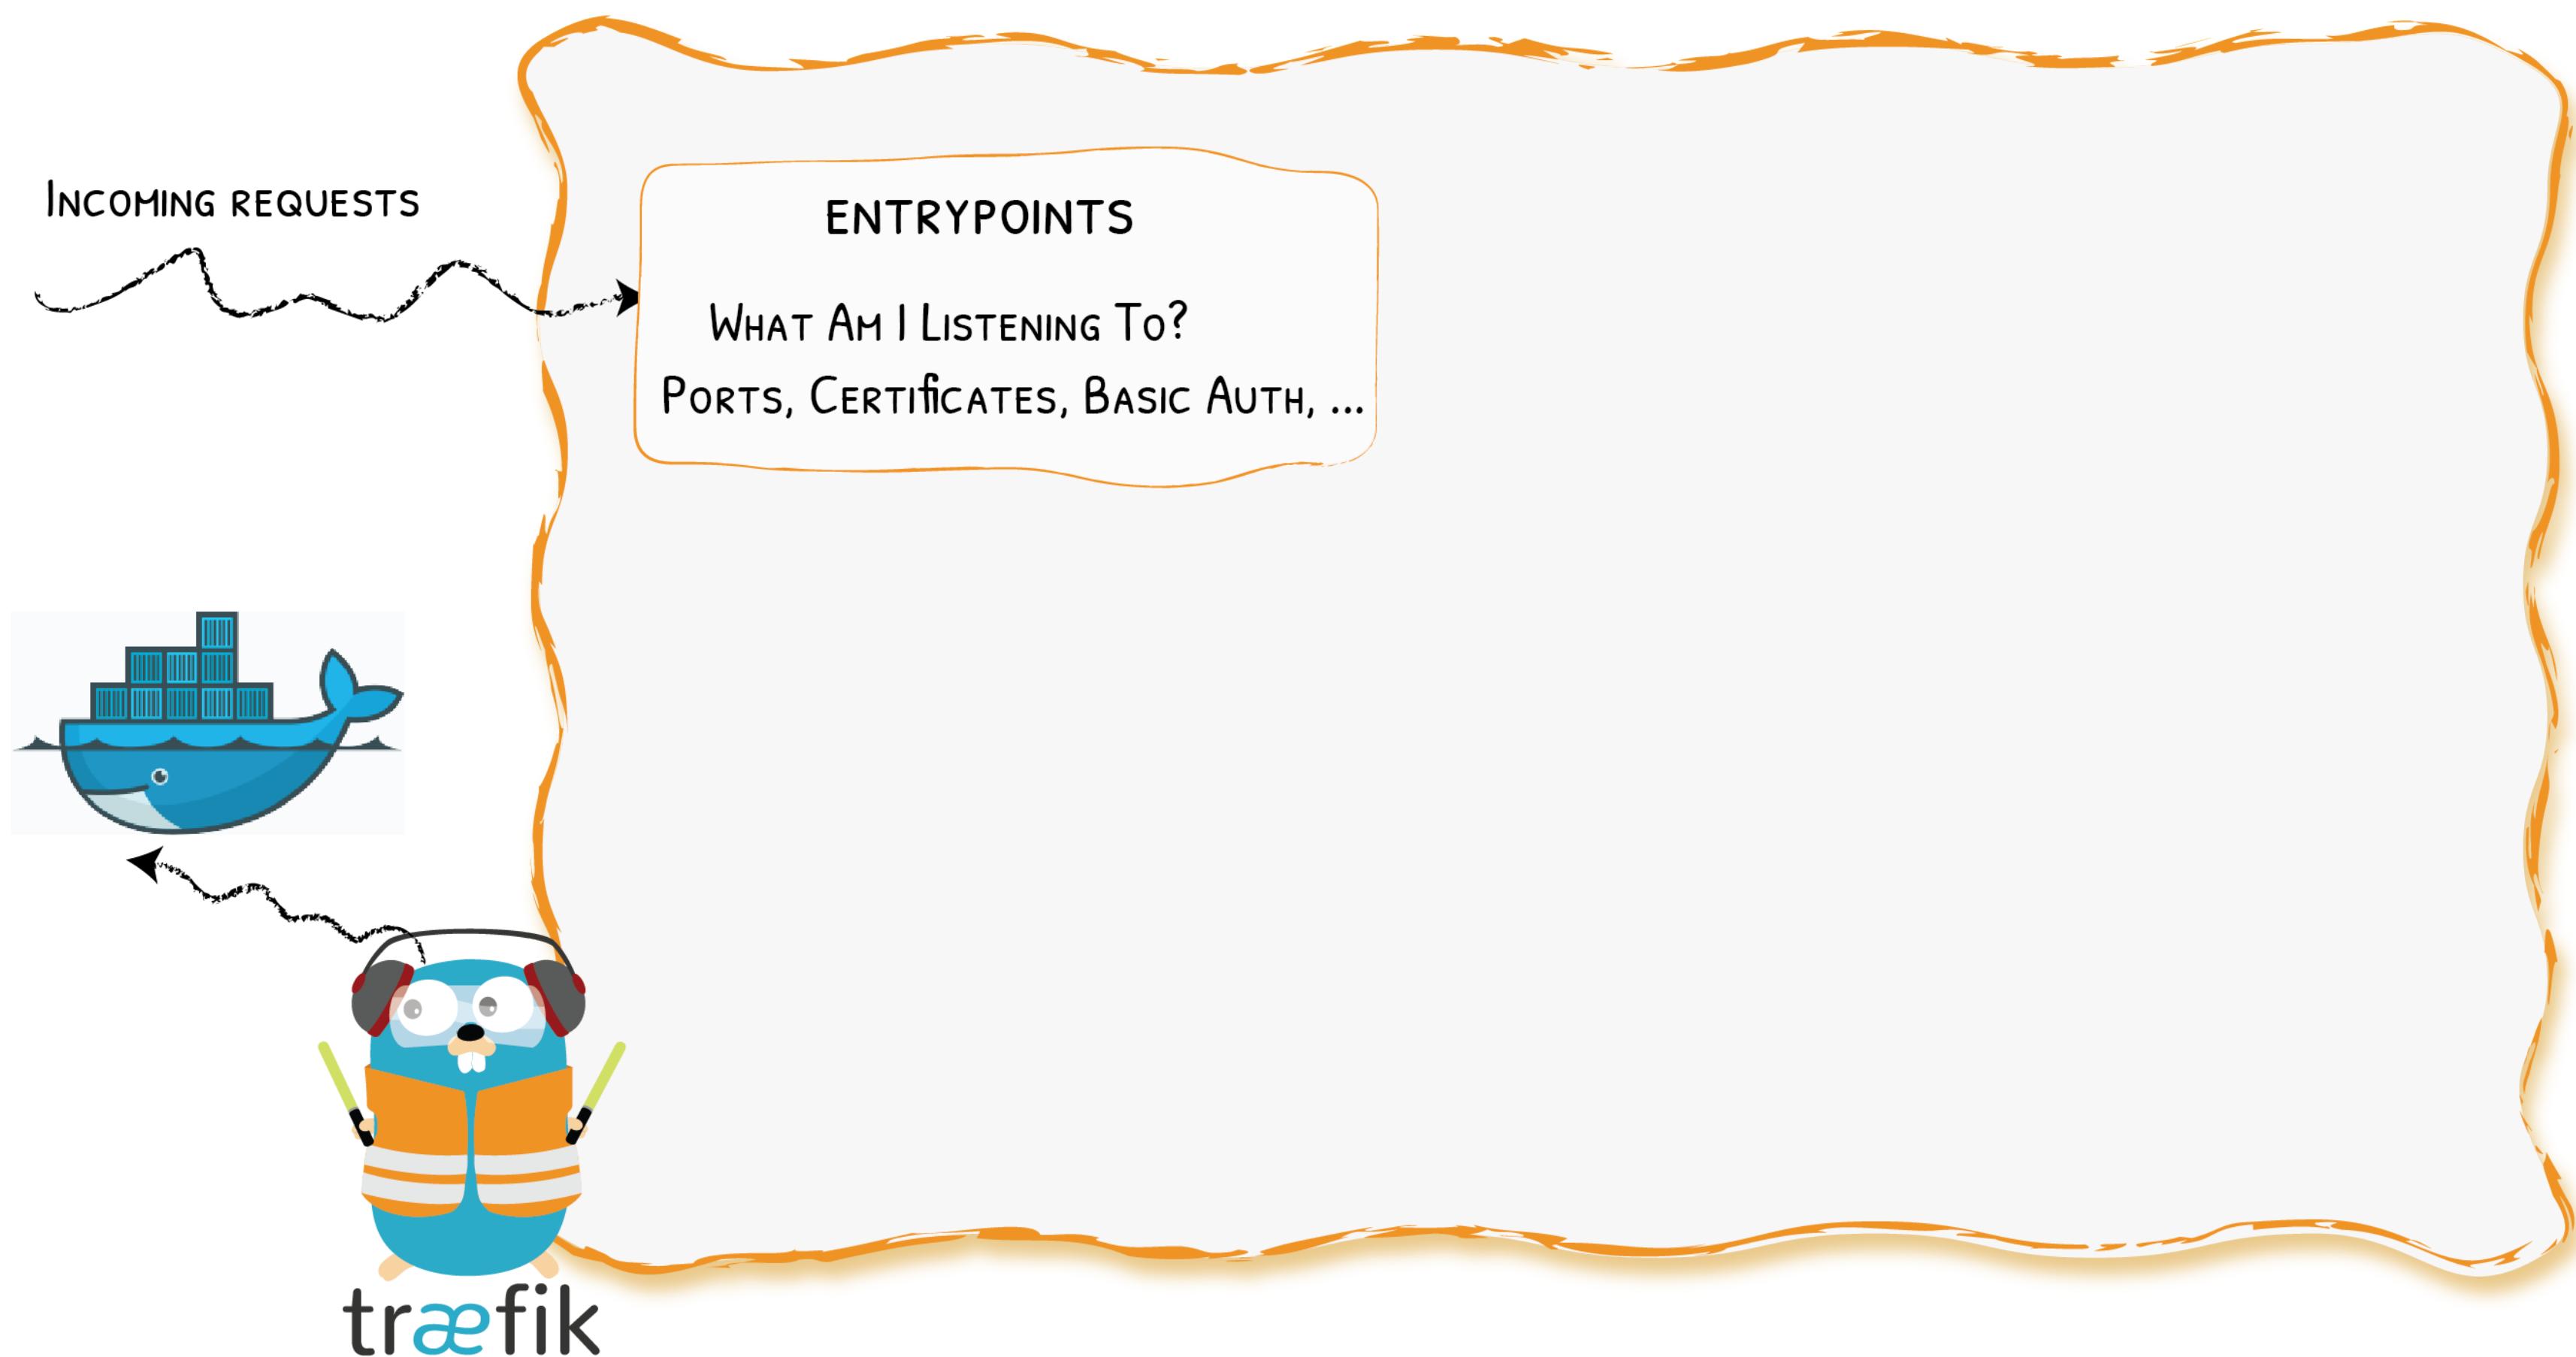

Let's Simplify

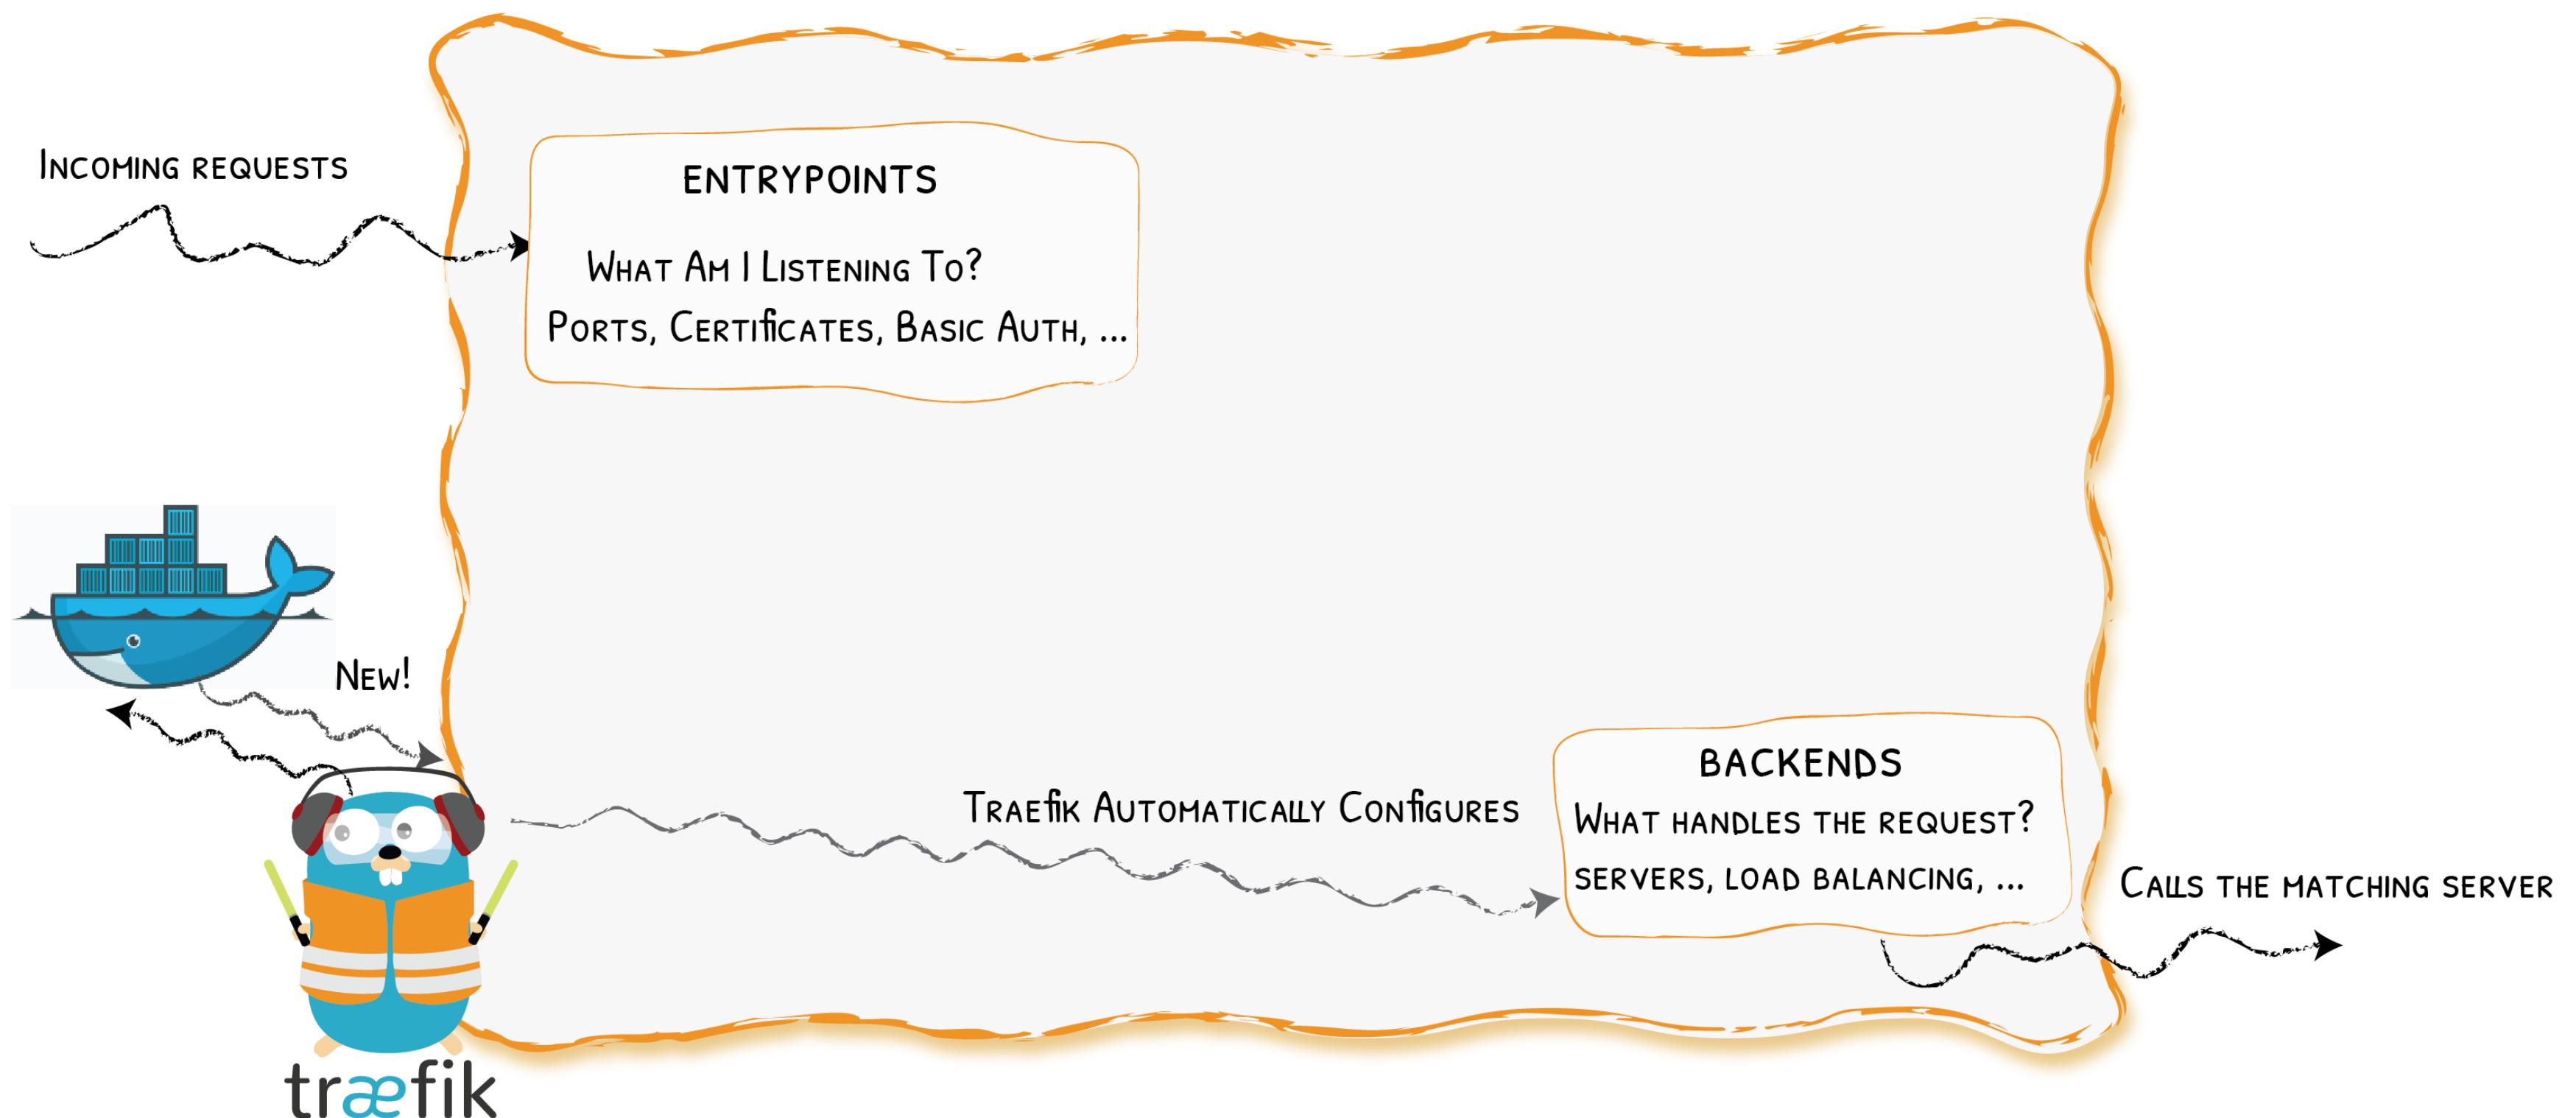

Providers

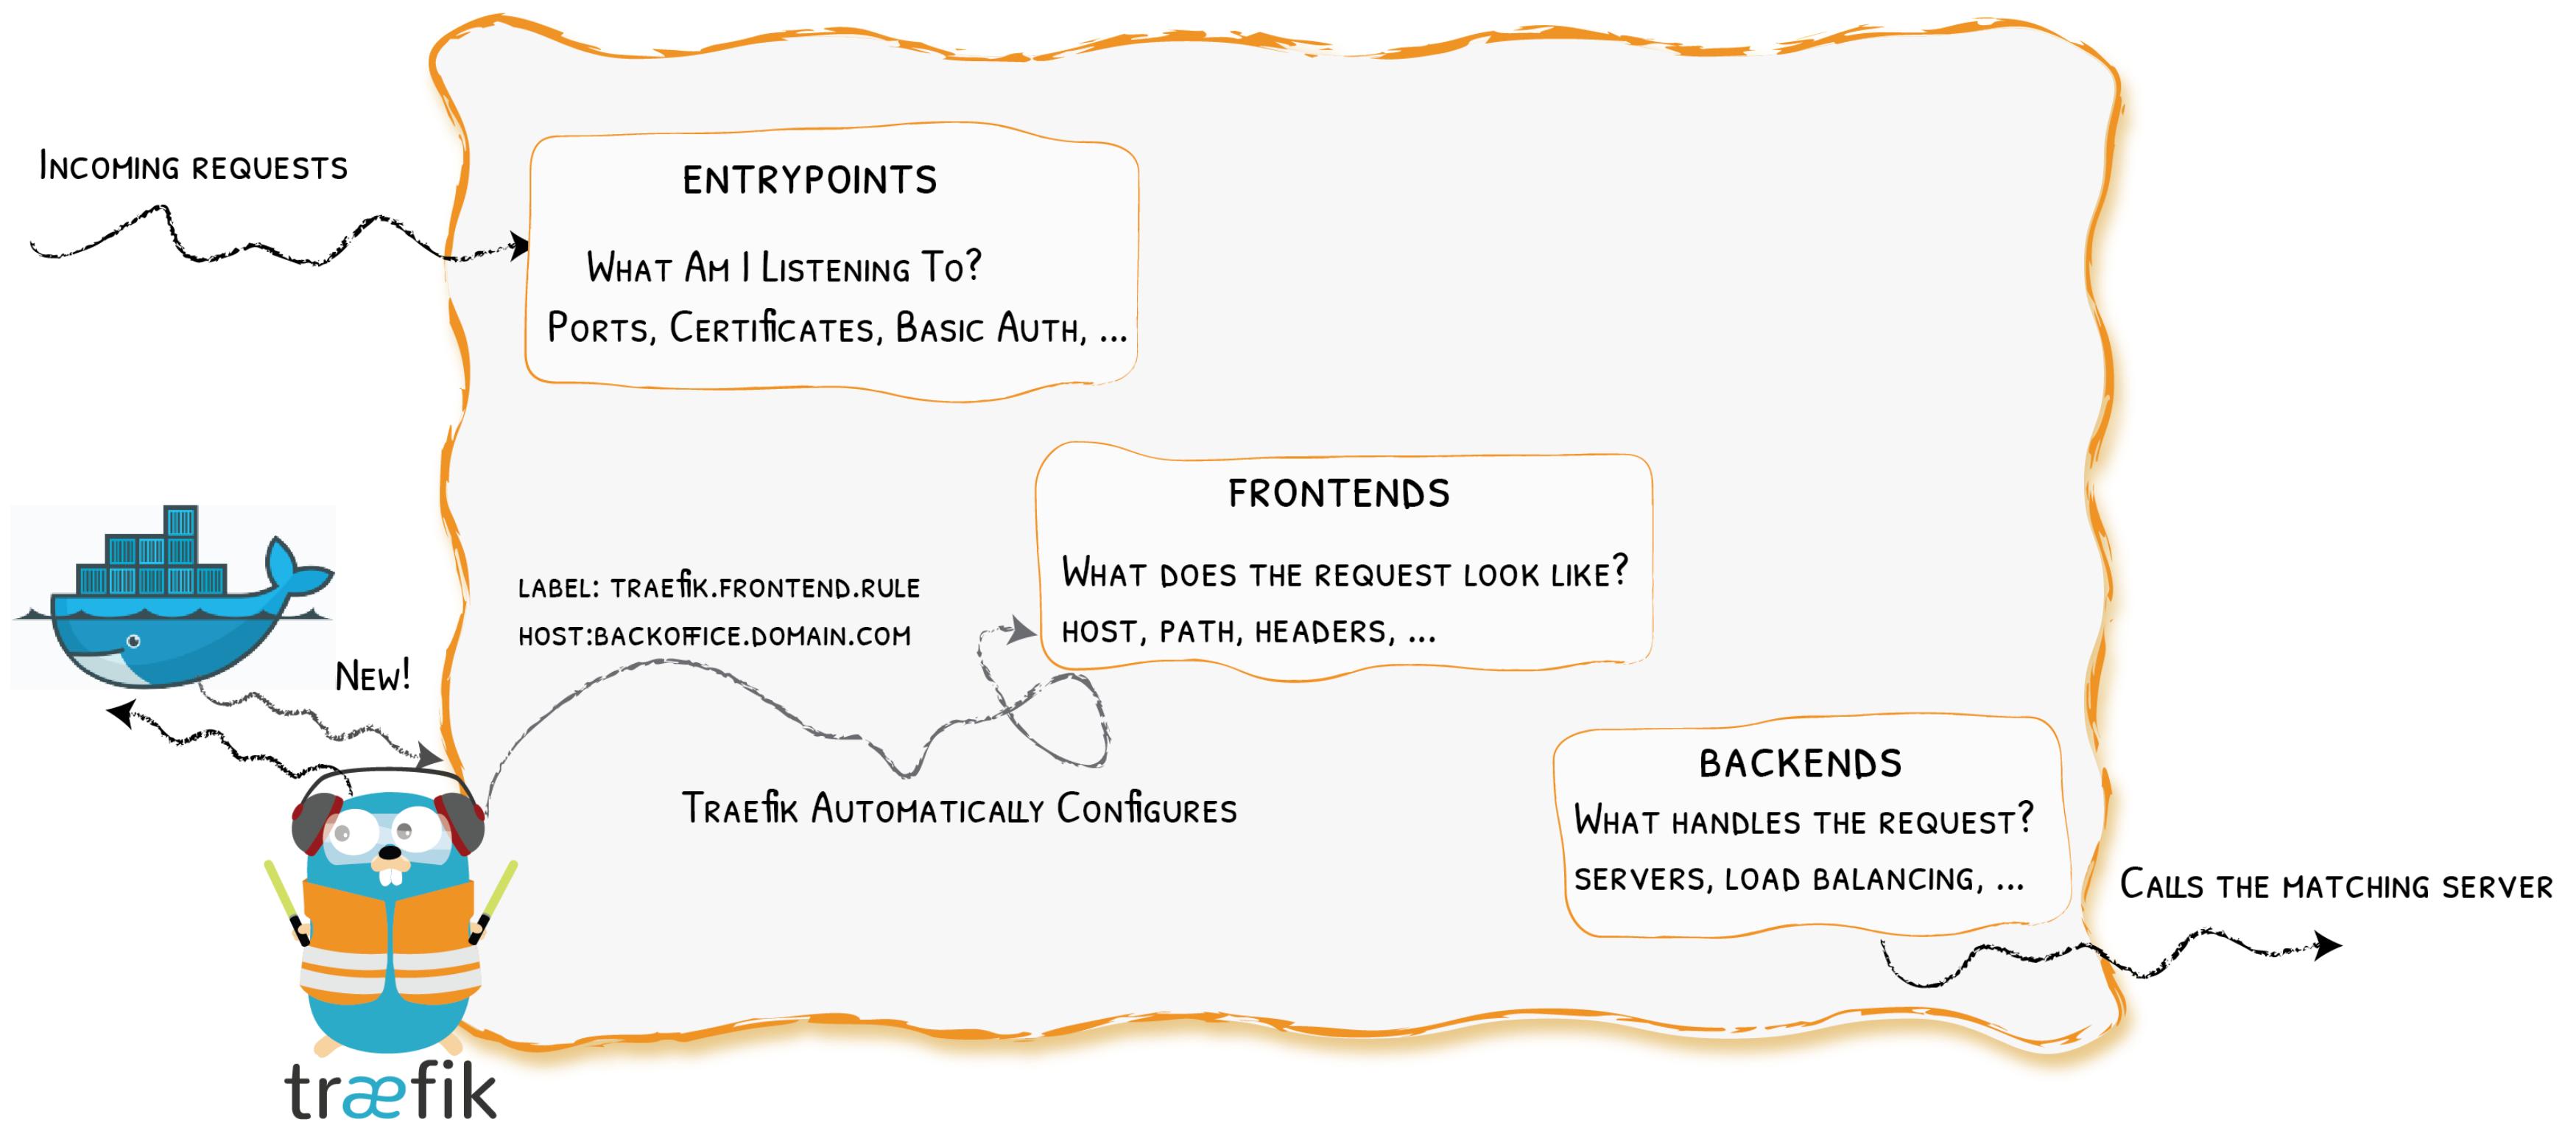

Entrypoints

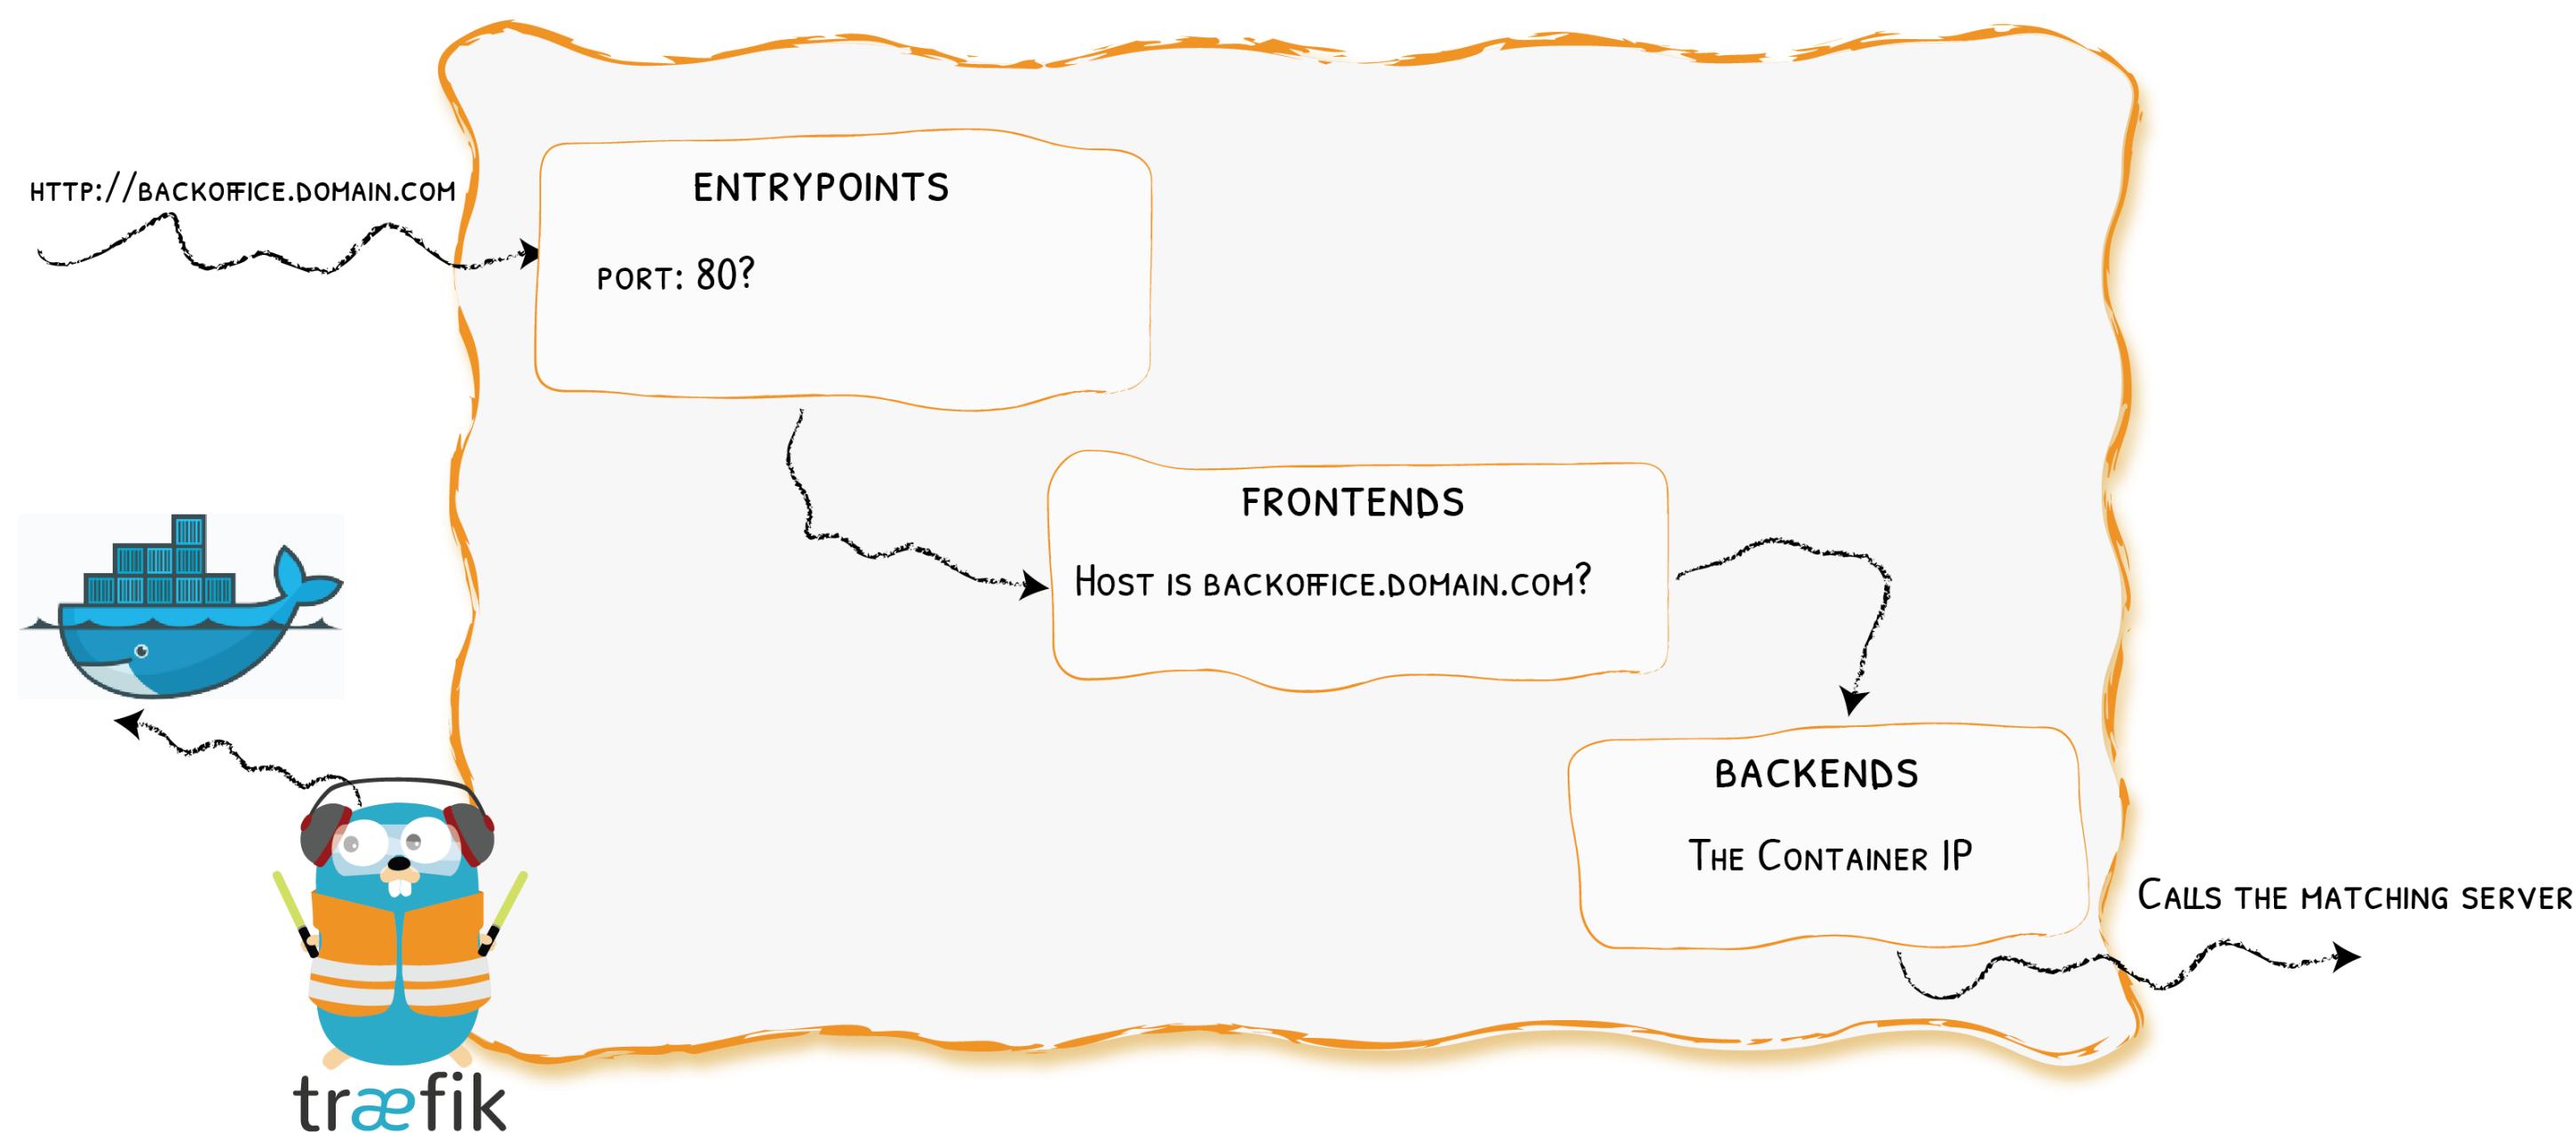

Backends

Frontends

In Practice

Show Me The Configuration!

Keep It Simple

- With 

```
entrypoint:  
  image: traefik:v1.7  
  command:  
    - "--docker"  
    - "--docker.domain=mycompany.org"  
    - "--acme.email=ssl-admin@mycompany.org"  
    - "--acme.httpChallenge.entryPoint=http"  
  # Or you could use a TOML file with "--configFile=/etc/traefik/traefik.toml  
volumes:  
  - /var/run/docker.sock:/var/run/docker.sock
```

HTTPS For Everyone With Let's Encrypt

- TLS, DNS and HTTP challenges supported

Demo

Traefik With ⚓

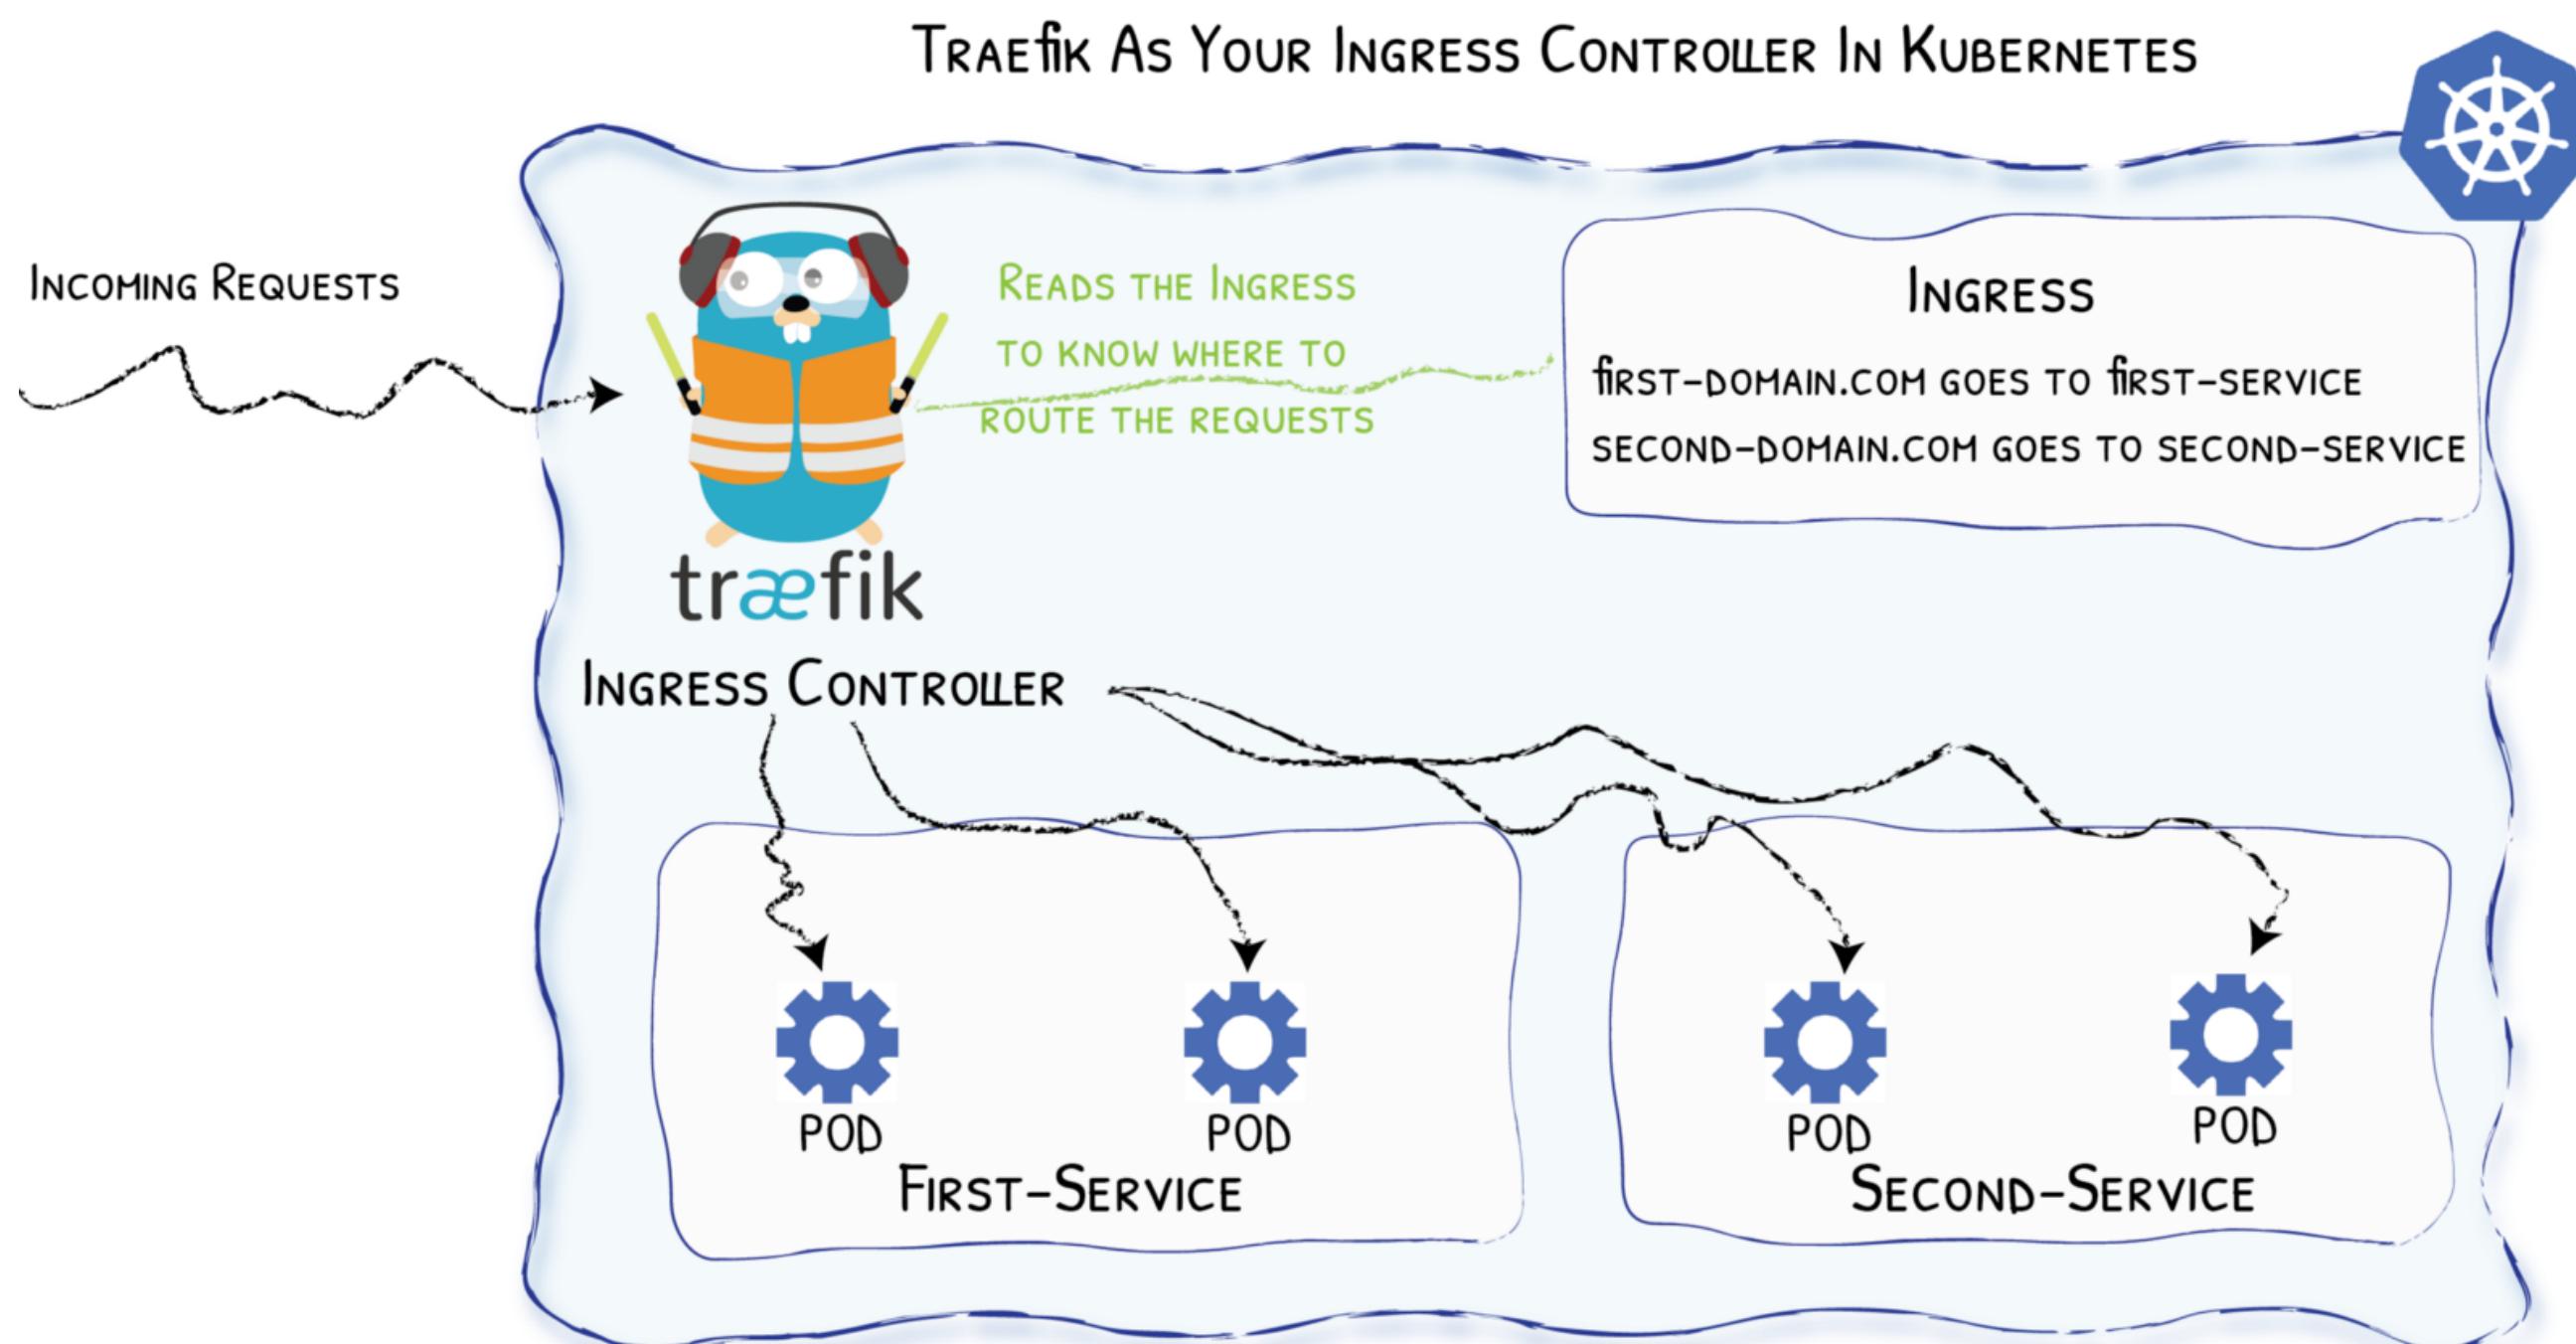

Diagram from <https://medium.com/@geraldcroes>

Did You Say YAML?

```
apiVersion: extensions/v1beta1
kind: Ingress
metadata:
  annotations:
    # kubernetes.io/ingress.class: 'nginx'
    kubernetes.io/ingress.class: 'traefik'
spec:
  rules:
  - host: mycompany.org
    http:
      paths:
      - path: "/whoami"
        backend:
          serviceName: whoami
          servicePort: 80
```

We Missed Talking About...

A cloud of network-related terms in various colors, including:

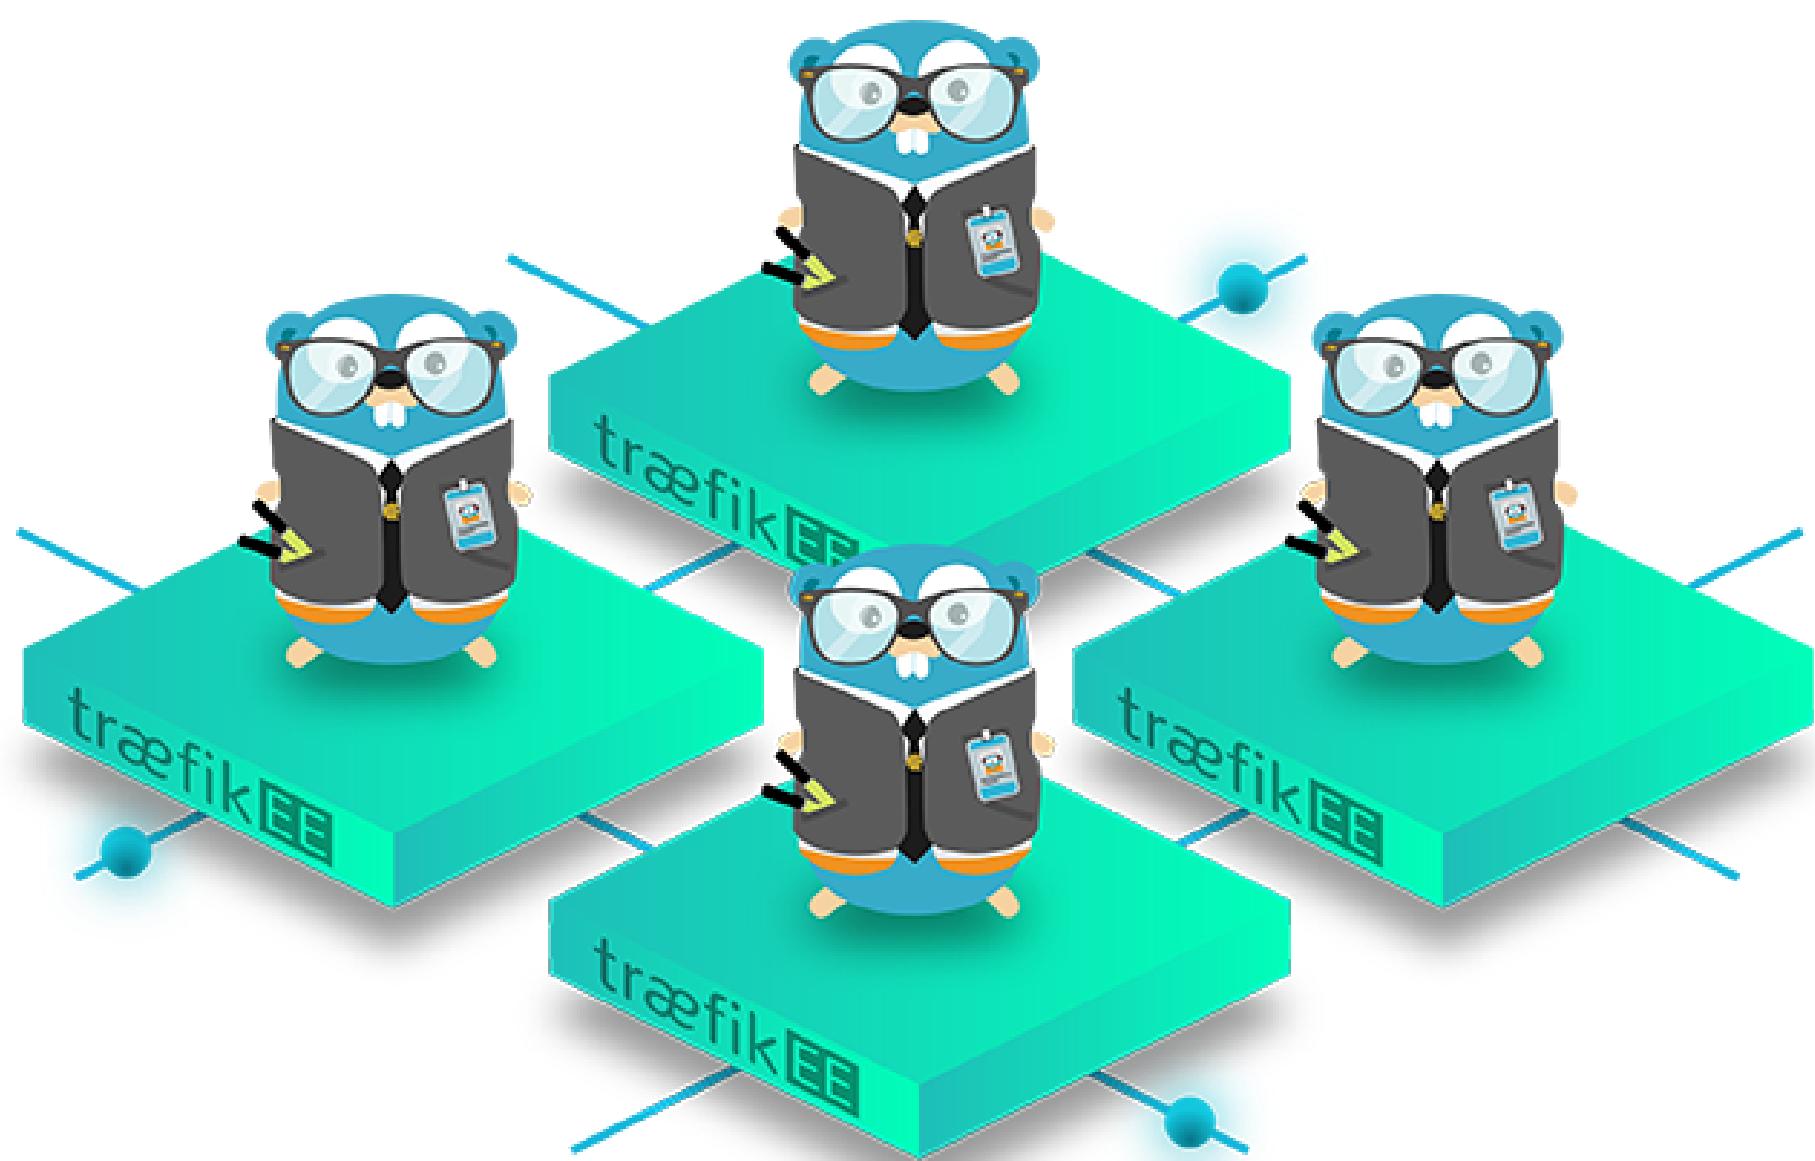

- MESOS
- ZIPKIN
- LIMITING
- KUBERNETES
- Dynamic Metrics
- HTTP ERROR
- CERTIFICATE
- TLS Reverse-Proxy
- HEADERS
- GRPC
- S3 BUCKET
- CIRCUIT BREAKERS
- DYNAMIC/WILDCARD
- Security Configurations
- Tracing PROXY
- SECRETS
- PROMETHEUS
- JAEGER
- WEBSOCKETS
- SSL
- FORWARDING
- REDIRECTS
- DOCKER
- PROTOCOL
- CHECKS
- CLUSTER AUTH
- HSTS
- RATE
- CONSUL
- SWARM MODE
- HEALTH

The Herd

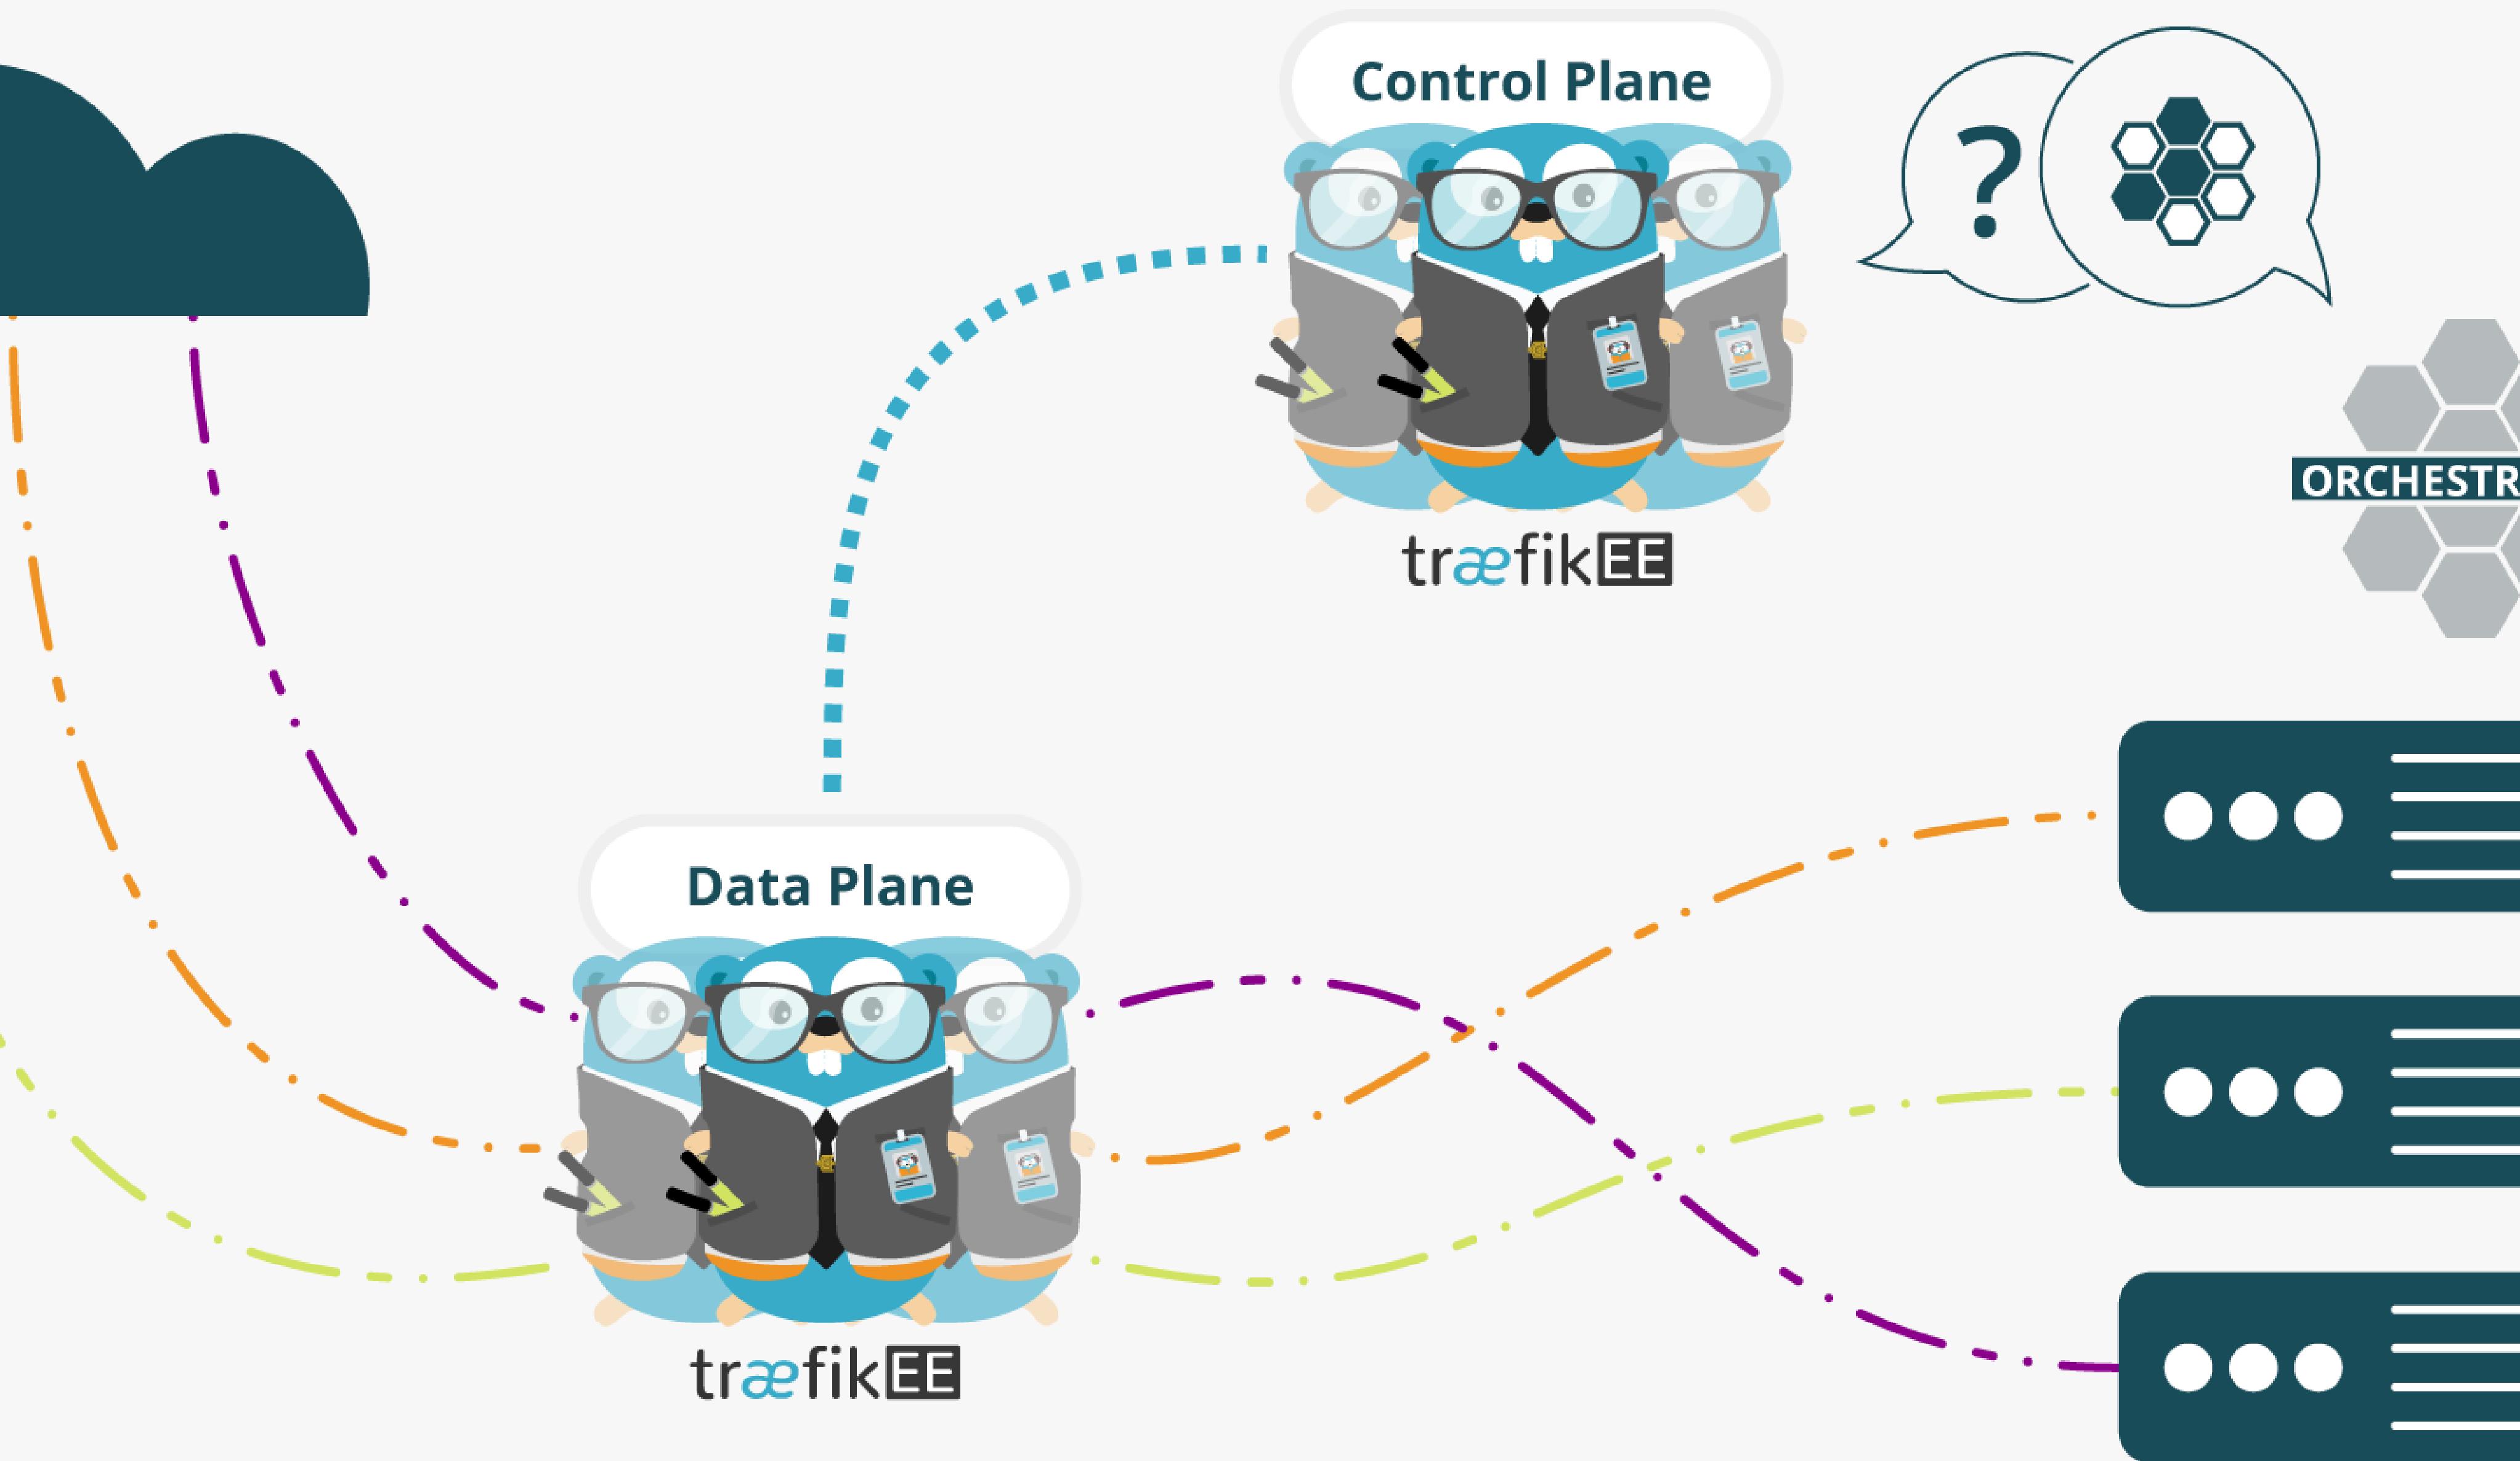

You came to the wrong neighbour

SECURITY

traefik ENTERPRISE EDITION

SCALABILITY

traefik ENTERPRISE EDITION

As Simple As Traefik

- Install it:

```
# Cluster Installation
traefikeectl install \
  --licensekey="SuperSecretLicence" \
  --dashboard \
  --kubernetes # Or --swarm
```

- Configure it:

```
# Routing Configuration, same as Traefik's
traefikeectl deploy \
  --acme.email=ssl-admin@mycompany.org
  --acme.tlsChallenge
  ...
```

Revamped Documentation

The screenshot shows the Traefik documentation website. At the top, there's a navigation bar with a search bar, a GitHub link (21k Stars - 2.1k Forks), and a logo. On the left, a sidebar lists navigation links: Welcome, Getting Started, Configuration Discovery, Routing & Load Balancing, HTTPS & TLS, Middlewares, Operations, Observability, Contributing, and Glossary. The main content area features a large, colorful diagram titled "Welcome". The diagram illustrates Traefik's role as an "Edge Router" that receives requests from the internet (e.g., API.DOMAIN.COM, DOMAIN.COM/WEB, BACKOFFICE.DOMAIN.COM) and routes them to various infrastructure components like Kubernetes, Mesos, Docker, and Backoffice servers. It highlights features such as automatic and dynamic routing, load balancing, auto-discovery, metrics tracing, and logs. Below the diagram, a text block describes Traefik as an open-source Edge Router.

Welcome

FROM THE INTERNET

API.DOMAIN.COM
DOMAIN.COM/WEB
BACKOFFICE.DOMAIN.COM

træfik

To Your Infrastructure

KUBERNETES
MESOS
PRIVATE SERVER

BACKOFFICE SERVER - 1
BACKOFFICE SERVER - 2

DOCKER

Metrics
Tracing
Logs

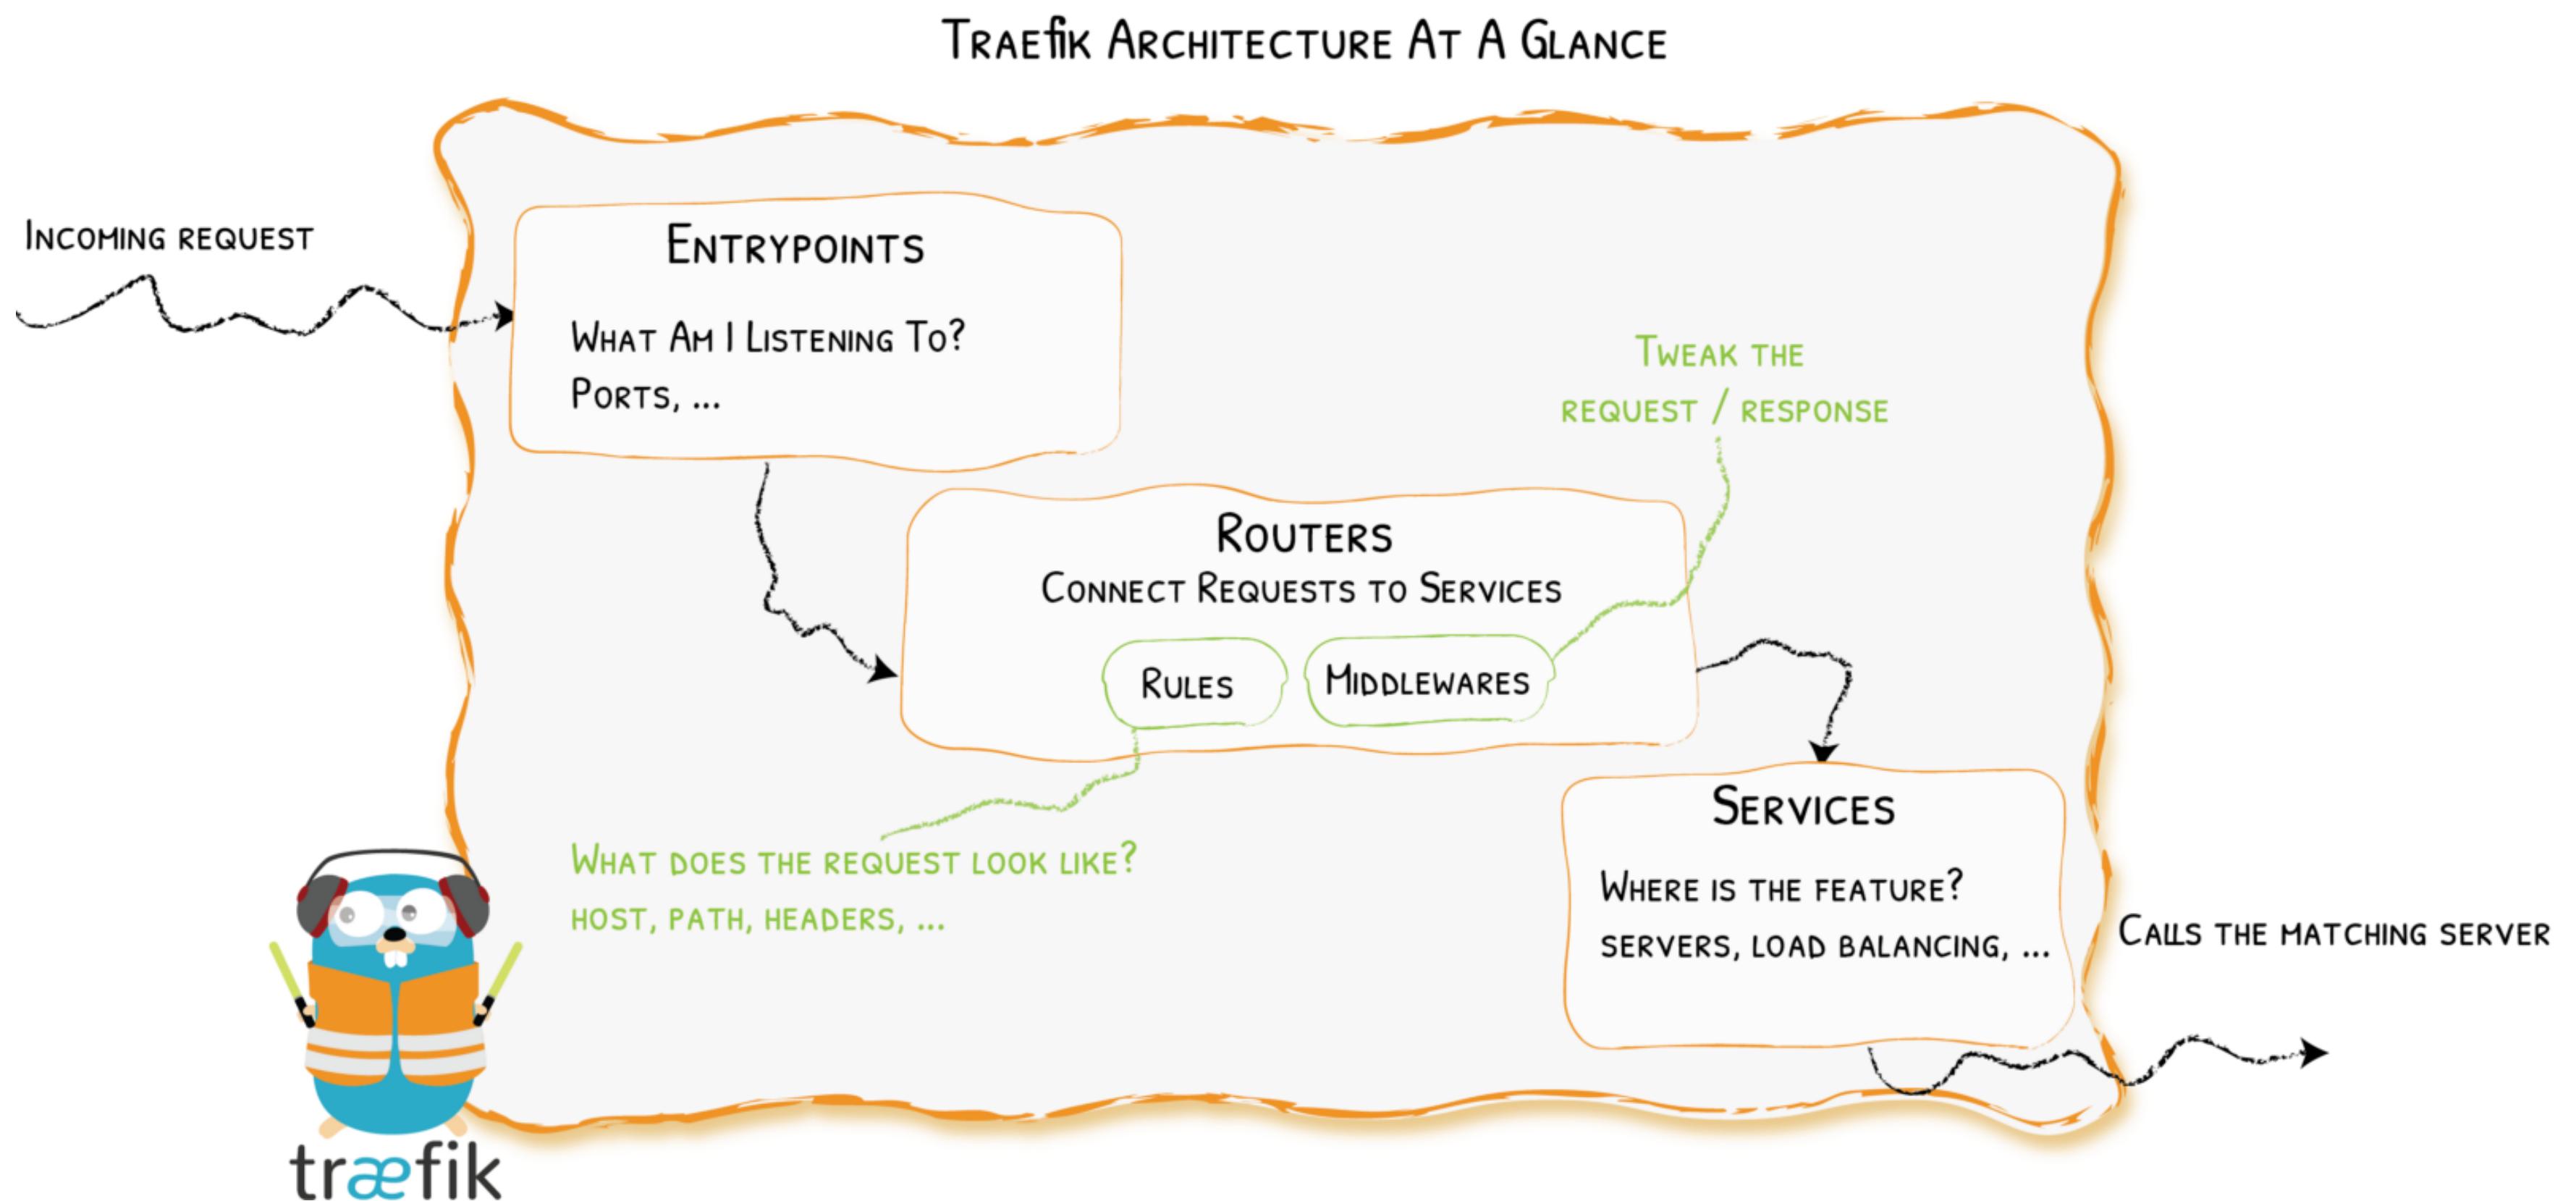

AUTOMATIC & DYNAMIC ROUTING

Load
Balancing

Auto
Discovery

Traefik is an [open-source](#) *Edge Router* that makes publishing your services a fun and easy experience. It receives requests on behalf of your system and finds out which components are responsible for handling them.

Clarified Concepts

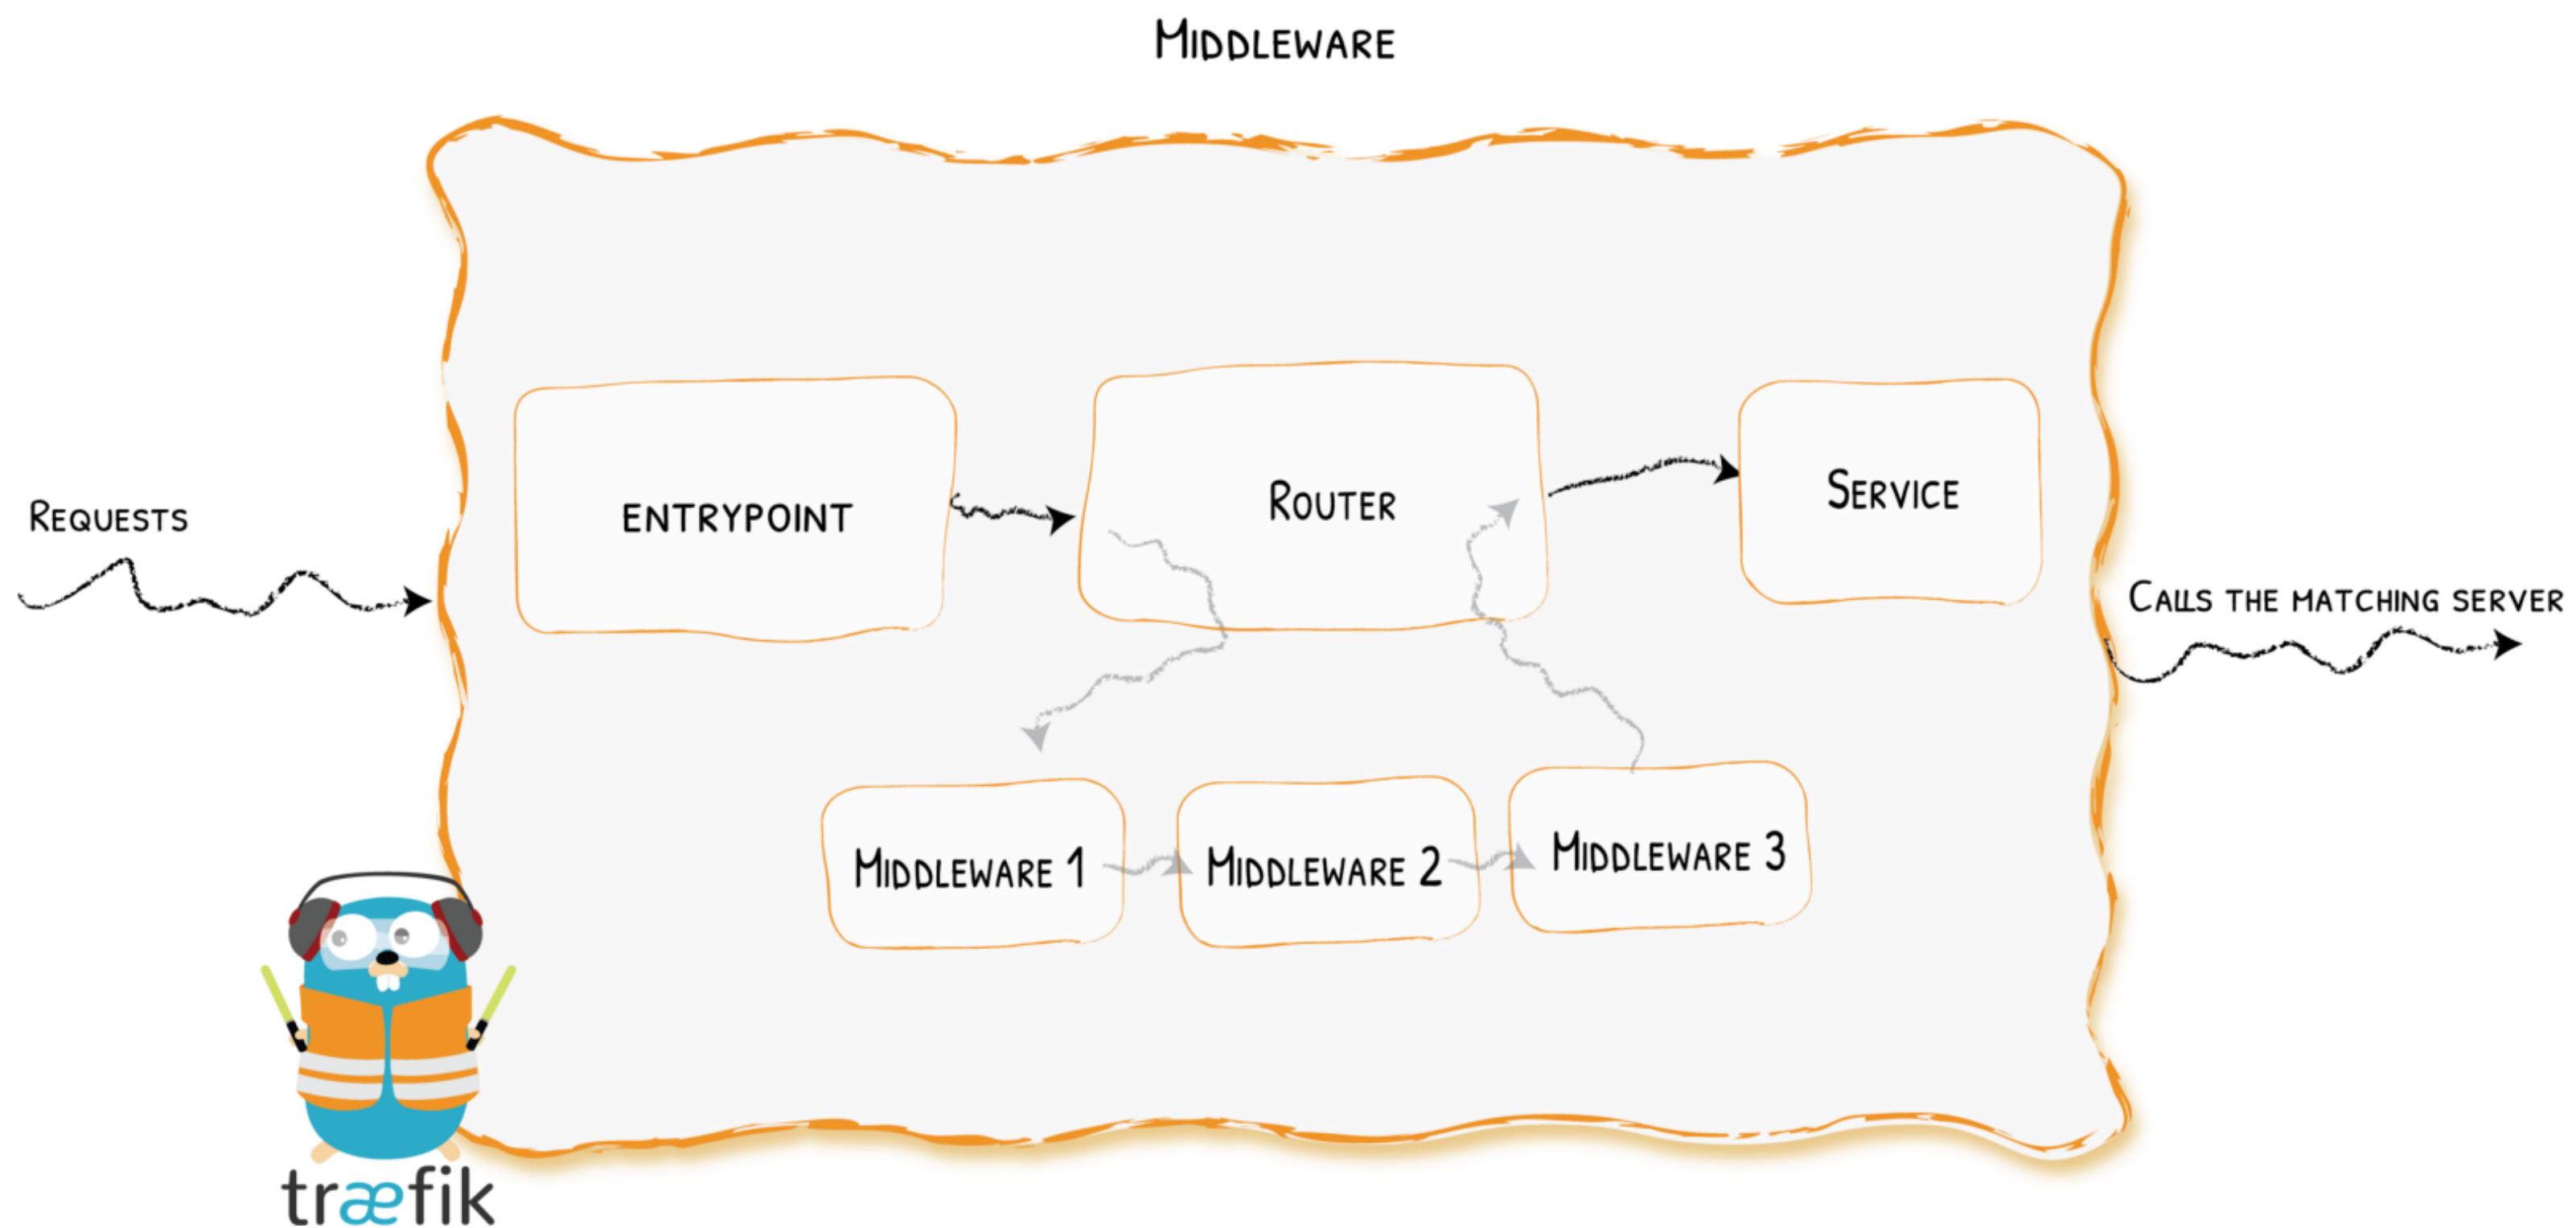

Expressive Routing Rule Syntax

Host(`api.dom`) || (Host(`dom`) && Path(`/api`))

```
# Send both requests to backend service:  
#   https://api.mycompany.com/v2  
#   https://api-v2.mycompany.com  
  
rule=(Host('api.mycompany.com') && PathPrefix('/v2')) || Host('api-v2.mycompany.com')
```

Middlewares

HTTP
&
TCP

Quick Glance

```
[entrypoints]
  [entrypoints.web-secure]
    address = "":443"
```

```
[http]
  [http.routers.to-service-1]
    rule = "Host(`demo.containous.cloud`)"
    service = "service-1"
  [http.routers.to-service-1.tls] # terminates the tls connection at HTTP
```

```
[tcp]
  [tcp.routers.to-service-2]
    rule = "HostSNI(`demo.containous.cloud`)"
    service = "service-2"
  [tcp.routers.to-service-2.tls] # terminates the tls connection at TCP
```

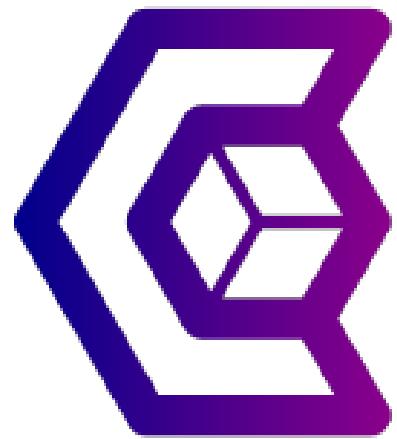

```
[tcp.routers.to-service-3]
  rule = "HostSNI(`demo.containous.cloud`)"
  service = "service-3"
  [tcp.routers.to-service-3.tls]
    passthrough = true # sends encrypted data "as is" to service-3
```

And So Much More...

- Learn more on the blog post
- Call for contribution: Grab it, Try it, and give us your feedback!

We Are Hiring!

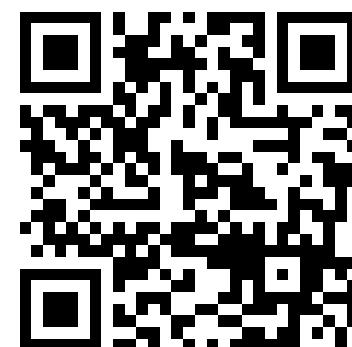

```
docker run -it containous/jobs
```

Thank You!
